Applications for Shares must be made in the annexed form. Each Applicant will be required to pay into the Bankers of the Company Ten Shillings per Share on the number of Shares applied for, in exchange for which a receipt will be given; and to make a further payment of Ten Shillings per Share on each Share as shall be allotted to him on allotment. In the event of the Directors allotting less than the whole number applied for, the amount paid into the Bankers will be applied towards the further payment of Ten Shillings per Share payable on the number allotted, but in case no allotment be made, the money so lodged will be forthwith returned in full.

Pamphlets, giving full details of Property, Prospectuses, Reports, Forms of Application for Shares, and of Bankers' Receipts for Deposits, may be obtained from Messrs. JOSHUA HUTCHINSON & SON, Angel Court, Throgmorton Street, London, Brokers to the Company; or from the Solicitors; or at the Office of the Company, 113, Fenchurch Street, London, E.C., where Plans of the Properties, and various specimens of the coal, may be seen and examined.

The Great Kanawha Company, Limited.

OFFICES:—113, FENCHURCH STREET, LONDON, E.C.

CAPITAL £200,000, in 40,000 Shares at £5 each. DEPOSIT, 10s. per Share on Application.

TO THE DIRECTORS OF THE ABOVE-NAMED COMPANY.

GENTLEMEN,—Having paid to the Bankers of the Company the Sum of £
being the amount of the Deposit of Ten Shillings per Share, I hereby request you to allot me
Shares in the above Company, or any less number, subject to the Regulations of the Company.

SMITH, ELDER, & CO., 65, CORNHILL.

Just Published, imperial 4to., half-morocco, gilt edges, price £5. 5s., with Index of nearly 120,000 Names,
THE IMPERIAL ATLAS OF MODERN GEOGRAPHY;

A Series of One Hundred carefully Coloured Maps, embracing the most Recent Discoveries, and the Latest Divisions of Territory in all parts of the World,

COMPILED FROM THE MOST AUTHENTIC SOURCES, UNDER THE SUPERVISION OF
W. G. BLACKIE, PH.D., F.R.G.S.

WITH AN INDEX OF NEARLY 120,000 NAMES, THE MOST COMPLETE EVER PUBLISHED.

"This fine series of accurate and beautiful maps."—*Daily News*.
"A highly satisfactory publication." . . . "The Maps are everything that could be wished, so far as accuracy, distinctness, uniformity, and fitness of detail are concerned."—*Illustrated*.
"One of the largest and most complete Atlases ever attempted."—*Critic*.
"Prettier maps than those of the Imperial Atlas are not often to be seen."—*Kilmarnock*.
"After a careful perusal of the whole work, we can safely say that we know of no Atlas published at the same low price which is so complete and accurate in detail, so clearly printed, and so well engraved, that the Maps have been hitherto constructed on scales so carefully adapted to the relative importance of countries, as viewed from the stand-point of English merchants and general readers; and that the Index attached to the engraved sheets is the most complete and best yet known compiled."—*London Review*.

Two Vols., imp. 8vo., 2,670 pages, 41. 6s.,

THE IMPERIAL GAZETTEER.

A General Dictionary of GEOGRAPHICAL, Physical, Political, Statistical, and Descriptive.

Edited by W. G. BLACKIE, PH.D., F.R.G.S.
With above 700 Illustrations, Views, Costumes, Maps, Plans, &c.

"All the articles that we have examined—whether long or short—have exhibited a greater degree of correctness in minute details than we should have thought practicable in so comprehensive a work."—*Illustrated*.
"By far the best Gazetteer in our language."—*Critic*.

Two Vols. imp. 8vo., 2,988 pages, including the Supplement, 41. 17s. 6d.

THE IMPERIAL DICTIONARY,

ENGLISH, TECHNOLOGICAL, AND SCIENTIFIC.

With a SUPPLEMENT containing an extensive collection of Words, Terms, and Phrases, not included in previous English Dictionaries.

Edited by JAMES ORRANT, LL.D.

Illustrated by above 2,500 Engravings on Wood.

"By Orrant has not only produced the best English Dictionary that exists, but, so far as the actual state of knowledge permitted, has made some approach towards perfection."—*British Quarterly Review*.

BLACKIE & SON, Warwick-square, City; and all Booksellers.

THE LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 21.]

SATURDAY, NOVEMBER 24, 1860.

[PRICE 3d.]

THE NEW AMERICAN PRESIDENT.

MR. ABRAHAM LINCOLN, of Illinois, an obscure politician, but an honest man, has been elected President of the United States. Six months ago his name was scarcely known beyond Washington and the limits of his own scantily-peopled State; but gradually, as the now ended contest assumed shape and exactitude, it grew in importance and in favour, and attracted to itself the support—first lukewarm, but afterwards cordial and enthusiastic—of the whole Republican party. The event is of the highest interest to America, and may ultimately prove to be of equal importance to the rest of the world. Although the British people as a rule do not devote much attention to foreign politics, they know enough of the recent history of the great American Confederation to understand that Mr. Lincoln's election is the triumph of a great principle; that in his person the Northern, or anti-slavery—commonly called the Republican party—has signally defeated the Democrats, or party of the South, whose main principle is the maintenance and extension of negro bondage. This party has so long monopolized office, that the men who will come into power on Mr. Buchanan's retirement will be as new to political life as the ultra-Liberals were in this country at the passing of the Reform Bill. But this fact will not impair their efficiency. The art of government is easily learned in a country where every man is a politician, and a long preparation in the exciting warfare of parliamentary opposition has not only sharpened their appetites for office, but their faculties for making the best of it.

The Southern party boasts that, although defeated in the Presidency, it possesses a majority in the Senate, and is certain to secure a majority in the House of Representatives. And if this majority be great in both Houses, Mr. Lincoln's four years' tenure of power will be beset with difficulties. Himself but the Prime Minister of the sovereign nation, he can neither be removed from office by the votes of a refractory Parliament, nor can he dissolve that Parliament if it impede public business, or refuse assent to his measures. This is a political "fix" unknown in this country, which practically, though not theoretically, enjoys a greater degree of liberty than the Americans have managed to secure for themselves. But Mr. Lincoln, though an earnest and consistent man, is not a violent politician. The custom of party, and the necessities of his position, unyielding as the laws of "the Medes and Persians," will compel him to make a clean sweep of every office-holder in the Union, down to the humblest clerks of the post-offices and custom-houses; but he will, doubtless, carry on his government in such a conciliatory manner, as to force the Democrats, after the first violence of their disappointment shall have cooled down, to resort to a purely constitutional line of opposition. Neither Mr. Lincoln, nor Mr. W. H. Seward (who will, in all probability, be the ruling spirit of his administration, and fill the office of Secretary of State), nor the other eminent Republicans whom he must gather round him, will imitate the misjudged policy of the South, and make the question of Negro Slavery an aggressive one. To limit slavery to the states in which it already exists—to assert the broad principle that in every new territory added to the Union, north of what is called "Mason and Dixon's Line," or the line of the Missouri Compromise, the freedom and not the slavery of the black population shall be the rule;—such will, in all probability, be the moderate line of policy adopted by the Republican party, as soon as it feels the responsibilities of office upon its shoulders. The most

ultra of Radicals becomes more or less Conservative, as soon as he is harnessed to the working waggons of the state. Among ourselves it is found that an extreme Liberal may be converted into a very cautious peer, and that a flaming demagogue becomes aristocratic as soon as he has agitated himself into a good place. And as John Bright may hereafter make a very excellent Paymaster of the Forces, and work quietly with his colleagues, so Mr. Lincoln and those zealous enemies of negro slavery whom he will call into his councils, will look upon the question with a judgment more sober than they exercised at a time when they were not responsible for the public safety.

The result will teach the South the old, but ever new, lesson, that a party must not be divided against itself if it hope to conquer. The Democrats will have four years to heal their wounds, and to devise measures for regaining the supremacy which they have lost. Their present bluster, and noisy threats of a disruption of the Union may be natural, but are not dignified. Such loud talk is but the bark of a cur that has no teeth to bite. The Northern and Western States, free of the taint and disease of slavery, and containing within themselves all the energy and enterprise, and the greatest part of the intellect of America, and being continually strengthened by the fresh blood of a hardy European immigration, could get on very well if all the slave states were to secede from the Union to-morrow. But the South could not exist for a year as an independent Confederation. With a scanty white population, not augmented by immigration, and with an enslaved black population, increasing in numbers much more rapidly than their masters; where, in case of any difficulty with the independent North and West, could the South look for assistance to prevent its re-annexation to the Union by force of arms? Some of the most rabid of the Southern journals speak of a free-trade alliance of the Southern Confederacy with Great Britain as an available policy to check in such a case the arrogance of the Protectionist North. But they forget that there must be at least two parties to an alliance, and that such an alliance as this would be most unpopular in Great Britain, where slavery and the slave-trade are held in almost equal abhorrence. They forget, also, that Liverpool and Manchester could obtain all the cotton they require from New Orleans and Charleston without political action on either side of the Atlantic. No one, in America or in England, can be surprised that the South feels sore at its defeat, and no one will be hard-hearted enough to deny it the "triste plaisir" of a few idle fulminations. The South will speak daggers but will not use them, and will advocate disruption in anger, but not in reason. The anger will pass and the reason will remain, and, once more restored to their customary placidity, the Democrats will do what prudent men should do under the circumstances, and prepare for a new struggle in 1864 under better auspices than in 1860.

Although the victorious Republican party is generally protectionist in its commercial policy, and the Southern cotton-planters are as generally free-traders, it need not be feared in this country that our relations with the great Republic will be in any degree less cordial than they have been. On the contrary, it is highly probable that they will become more so. Mr. Buchanan, even before the auspicious visit of the Prince of Wales, had done much, in a quiet, unostentatious, but effective manner, to discourage such rampant busy-bodies as General Harney and others, who sought to imperil the good understanding existing between the two nations; and it is

not likely that the new Government of the United States will be less moderate, conciliatory, and enlightened. There is no existing estrangement, and no ground of misunderstanding whatsoever. If any should arise hereafter, the good feeling implanted by the Prince's visit in the hearts of the American millions, no less than the wisdom, knowledge, and British sympathy of such a man as Mr. Seward, will combine to keep matters right, and cement the friendship of two great nations who never were enemies at heart, although unfortunate circumstances made them once appear to be so.

ITALIAN DISCORD.

WHEN, a few weeks ago the Garibaldians were wending their way triumphantly northward through Calabria, and the regulars of Il Rê Galantuomo were making short work with Lamoricière, it seemed as though the spirit of discord had departed from that fair land, wherein it had too long found an abode. It seemed as though the cry of "*Italia una reinvicta*" were the expression of a reality to be and to endure, not the ejaculation of men intoxicated with first draughts of unwonted liberty—howsoever professions made at Baccalanian feasts. In the presence of Garibaldi, the honest and unselfish, it was hard to believe that discords should arise. Italian unity had come to be looked upon not as a probability of the future, but as an accomplished fact. The voice of unbelief was stifled. Friend and foe to the Italian cause of liberty looked forward without entertaining a doubt—but in different complexions of mind—to the rapidly approaching day when the red blouses and the Mæceniators of Italy, meeting at last, should exchange brotherly greetings together, and merge their legions into one.

But the meeting came to pass, and there were no greetings. Between troops of acknowledged enemies there could hardly subsist a worse feeling than between the troops of Il Rê Galantuomo and the Garibaldian irregulars. Signs unmistakable reveal the unpleasant truth, that however much or however little the Sardinian Government might have favoured the projects of Garibaldi in the beginning, there is now no great amount of love lost between that Government and the liberator. Further, the events of the few momentous days which intervened between the meeting on Neapolitan soil of Victor Emmanuel and Garibaldi, and the departure of the latter to Capri, force upon one the conviction too plainly and too painfully, that the ties of personal feeling subsisting between the King and the Dictator, are less strong than they were supposed to be. It would have been well for the future of Italy if the measure and degree of that weakness had remained untested and unguessed, or, at any rate, that the result had remained unrecorded.

For a long time past the fact had been perfectly well known that between Garibaldi and Cavour, or, more properly speaking, between Garibaldi and the Sardinian Government, the feeling was about as bad as it could be. For certain, and very evident reasons, the wide-spread knowledge of this fact prejudiced in no degree the mission of holy inconceivability on which the Hero of Calatini was bent. Even if Garibaldi had not quarrelled with Victor Emmanuel's Government, the fiction and pretence of such a quarrel might have been no bad stroke of policy, considering that proven complicity on the part of Sardinia in the Italian expedition might, any must, have led to foreign intervention of some sort. The conditions afforded by such a quarrel must be pronounced favourable to the designs of Garibaldi, under the proviso and reservation that there should be a perfect understanding between himself and the king. The belief in such understanding has been wide-spread and general. It has been a source of power to Victor Emmanuel and to Garibaldi alike. In adverse moments, when Fortune withlaid her smiles, and the future lowered, the general faith in the understanding between the two dissipated the cloud, revealed blue sky, and seemed to make manifest a holy banner unfurled—the motto of *In hoc signo vinces* surmounting the cross of Saviour. These pleasing illusions have been rudely dissipated. Jealousy might have been anticipated between the two parties to some extent; but if three weeks ago the prediction had been made that the month of November would not pass by without seeing Garibaldians going to the theatre, revolver-armed, lest the Sardinian troops might insult them, and preparing to avenge the insult, such a prediction would have assuredly been laughed to scorn.

It is impossible to overrate the bad consequences which would accrue from any overt act of violence committed between the Garibaldians and the Sardinian regulars. On the one hand, it would be signal for the extreme republican party to assume the reins of government, the pretensions to which they have only waived provisionally; whilst, on the other hand, they would have been furnished a plea and a prelude for reactionary movements on the part of the discarded Bourbons, and intervention, it may be, on the part of more than one foreign power. Until further particulars of the dispute be brought into evidence, it would be premature to adjudicate between Garibaldi and Victor Emmanuel. In this, as in most other cases, justice, probably, may lie between the two extremes. It does not seem such or premature, however, to express the belief that Victor

Emmanuel and his Cabinet have attempted to apply the precedents of statesmanship somewhat too literally, and too unbenignly, to conditions which have resulted from the violation of all precedents,—conditions which have been brought about by the sheer force of genius. In common with others who desire the future welfare of Italy, we can cherish no better desire than that the wild collision of feeling which heralded the progress of Garibaldi, which went on increasing with that progress, and which, now that the hero has departed to his home, remains clashing and goading to enmity men who would be friends, should calm down, and give place to the less romantic, but more durable routine of constitutional rule. Cherishing this desire, however, we cannot but think that Sardinia has been ill-advised in treating so lightly the sentiment of popular Majesty, which is the most prominent attribute of Garibaldi and his followers. It is dangerous to deal rudely with a sentiment when it has once entered into the mind of a people, especially of people so excitable in temperament as the Southern Italians. Now Garibaldi has elevated himself, so to speak, into the condition of a sentiment. His very errors have in their nature a quality of nobility; and though men of the world, speaking after the ways of the world, may deem him unpracticable, yet so unselfish are the evidences of this impracticability, that they cannot fail to elicit respect, and bind the man still more firmly to the hearts of young Italy.

To our apprehension, it is perfectly evident that if it be designed that Victor Emmanuel shall be King of Italy, with any prospect of remaining so, to the advantage of the numerous races brought under his sway, means should be taken to absolve Garibaldi, with all suitable speed, from the responsibility of that dangerous eminence to which his virtues, and a career heroic beyond all precedent, have elevated him. Garibaldi was far too good a man, and has far too much knowledge of human nature not to be strong in this matter. King Victor Emmanuel's government seeks to understand this too; but, unfortunately, they appear to have gone the wrong way about it. De Lolme, speaking of the British Constitution, explains to the student a fundamental rule of our government, in elevating to the peerage individuals who threaten to become too powerful as commoners. He might have generalised. It is a rule of all governments, and so general is the individual pride of mankind, that the bait usually takes, and when taken, the aggrandized individual is, by force of circumstances, removed from the sphere in which he moved and displayed his sympathies. This sort of recognition,—one founded on tradition and precedent,—has been tried and declined. For himself, Garibaldi would do nothing; but he claims recognition for the companions in arms who have fought his battles, going on from victory to victory. There may be difficulties in the way,—there may be no precedent for what Garibaldi asks. Very likely not. The whole succession of events is without precedent; but amidst many doubts and difficulties, we are sure of one thing, and it is this: It will not do for Victor Emmanuel to thrust Garibaldi coolly into the background, or to treat his volunteers as inferior personages. This is not the way to eliminate the Garibaldian sentiment from the dominant, and, we own, somewhat dangerous position it now holds in Italian politics.

THE PROFIT OF PUBLIC EXECUTIONS.

MULLINS, whose trial and conviction we recorded on the 3rd instant, was executed on Monday, and it is now worth asking what society gains by such an exercise of its power! If hanging be justifiable in any case, it was in his; and we take no objection to it whatever from any sympathy with Mullins. Society provides for its own welfare; and to attain this end, overrules all considerations of humanity, all sympathy with suffering, all respect for the moral law continually inculcated by religion, and to prevent if possible a repetition of crimes like that of Mullins, puts him to death. Does society achieve the object it has in view? Does it actually gain anything by executing murderers on the gallows? If it gain by it, there is an end of the matter. That is the only point to be proved.

The expectation that other people will be deterred from committing murder by putting Mullins to death, refers to the future, and is obviously a mere supposition. What will be the consequences, the wisest and the most experienced men, as exemplified by the failure of a vast quantity of legislation, know very imperfectly. To death we are all liable, and it is much more certain that protracted disease, ending in death, will follow from intemperance, than that a man will be hanged for committing murder. If the fear of death, therefore, were powerful to check desire, there would be no intemperance. The fear, happily for all, is not so powerful as is apprehended by those who calculate that it will discourage murder.

Formerly it was supposed that hanging would prevent sheep-stealing, forgery, cutting down young trees, larceny, burglary, and even divergencies of religious belief; but experience soon demonstrated that such offences were not preventable by the dread of capital punishment. Though other causes, such as an abundance of artificial light, an improved police, more certain means of detection, an increase of general wealth, and a diminution of relative poverty,

may have contributed to decrease all these offences, there is no doubt whatever that they have much decreased since they ceased to be punished capitally.

Since the commencement of this century, when upwards of one hundred different offences were liable to be so punished, the legislature has amazingly reduced the number, leaving now only six offences so punished. Now, if crimes had increased as punishment was lessened, there might be reason to believe in the efficacy of capital punishment, but the reverse is the fact. "The whole tendency of crime," says Mr. Redgrave in his very latest annual summary of our criminal returns for 1859, "has been for some time to the diminution of offences of violence." This expresses the sum of all our experience; on this subject, and is a much wider and safer deduction than any deduction from the increase or decrease of particular offences. These are affected by minute circumstances which require elaborate analysis to bring out the truth. Not merely for the last thirty years, to which his observations are limited, but for the whole century, and even for many centuries, as legislation has become less ferocious crimes of violence have decreased. For what reason should this deduction not hold good as to murder? Why should the people become vindictive, bloodthirsty, and cruel murderers from the legislature acting on the great precept of religious instruction, "Thou shalt not commit murder"? The expectation, then, that capital punishment prevents murder is clearly erroneous, and to act on it is to set at naught all experience and impair the faith of mankind in the uniform course of nature.

Were it proved by experience to be good to commit murder, it is quite clear, from the practice of disregarding this important maxim when it is even imagined to be beneficial, as in the present case, that men would commit it without stint or remorse. The course of nature, however, being consistent with this maxim, it is continually enforced and strengthened. Only in the name of society is it now deemed right to take away life; and the respect entertained for the legislative authority which ordains it, suggests the belief, in opposition to experience and religion, that in certain cases murder ought to be committed. For a long period this belief was extended to many more actions than at present; but towards the close of the last century the respect entertained for legislators received a rude shock, and their authority becoming insufficient to make men believe that to commit murder, in the many cases in which they ordained death, was righteous, they were obliged to abolish this punishment in a great number of instances. The progress of humanity overruled legislation, though the legislator still believes that he can dictate its course.

As the expectation that crimes of violence amongst the people will be lessened if the state commits them on the plea of punishment, is a mere imagination, like the supposition that national welfare would flow from the maintenance of the Corn Laws, the cost of this exercise of force deserves consideration. It is no loss to society that a man, or about ten or eleven men in a year, like Mullins, should be put to death, for such men are generally supposed to do only mischief, though none of them is probably utterly worthless; but they cannot be put to death without considerable cost. Magistrates, policemen, gaolers, the hangman, &c., are all put in reputation, and must be paid. Crowds are gathered about the spectacle who lose half or a whole day's labour. The collection of mobs is always an occasion of outrage. Quarrels ensue amongst themselves and with the police. A place of execution is notoriously a place of great disorder. Many minor crimes, cursing, swearing, jostling one another, rousing anger, pilfering, are all practised on such occasions. It is a scene of riot and disorder, provoking violent crimes.

The example, too, is dreadfully pernicious. Life, to be preserved, must be held sacred. This is taught us by the instinct of self-preservation. Exertion of every kind has for its object the preservation of life; but this example emphatically teaches the multitude that whenever they think life stands in the way of immediate gratification, and they can securely destroy it, they may. This is the great lesson which the expeditious manner of taking away life at the gallows, on the supposition that it is beneficial to society, impresses on every individual of the collected mob; and this is a lesson which, very frequently carried into practice, occasions many crimes, and costs society an enormous amount of suffering. It is clear, then, that hanging a murderer, however *prima facie* beneficial it may be supposed, is a loss and an injury to society.

If we ought not to hang murderers—if we cannot maintain them in idleness and in prison—if we cannot set them to work without precautions more costly than their labour is worth—if we cannot let them go unpunished, what is to be done with them? The question is a difficult one, which we pretend not at once to answer. Society has never yet solemnly and seriously taken the subject into consideration, but has always hastened impulsively for want of knowing better, to punish the murderer with death. To tolerate murder is impossible. Patiently, with it is consistent, and so society, acting on the old principle of vengeance, hangs the murderer. His existence is insupportable, and impulse urges society to deprive him of life. We cannot follow some persons in condemning such impulses.

On them depends the conservation of society, though reason and knowledge ultimately find the actions they dictate to be in many cases erroneous. They impart instruction, and are the means of conducting nature's pupils, enjoined to prove all things, to higher knowledge and an improved condition.

This fact is, however, now dawning on us, if it be not risen into full day, that this impulse has served its destined purpose, and is to be corrected by the new instruction derived from acting on it. We have not yet found out what we are to do with murderers; we have only learned that we are not to hang them; and this great fact must induce us to investigate further what ought to be done with them. It is a branch of the great subject of crime and punishment, which has for ever engaged the attention, and stimulated the imagination of mankind to reduce it to a correct theory, which even yet, as this particular instance proves, has to be done.

SIX PER CENT.

THE capital of the world is its accumulated labour. When that labour, or a considerable part of it, is diverted from productive purposes, so much of our capital is lost, we are in fact by so much the poorer. This universal solidarity is the bond which unites all humanity. Every man became richer on the day when the negroes on the west coast of Africa were induced to cultivate and gather palm oil, instead of pursuing their intertribe wars. We all feel it when a certain amount of this, our, capital, is subtracted from the great labour market of the world; ill-doing, or rather the want of well-doing, is felt at once in the great cities and metropolises. It translates itself to the comprehension of the least of us in the unmistakable formula, "The Bank rate has been raised to six per cent." Commerce and trade stand aghast at the unlooked for announcement, which operates like a decree of doom, alike on New York and Vienna, on St. Petersburg and Calcutta.

No warning signs in the world of politics or commerce had prepared the general public for the sudden advance in the price of money, and it was very generally supposed that it was as uneluded for as inconvenient. But money is only the material in which our labour is paid; when our labour is scant, its equivalent is stinted. In three of the great countries of the Continent, an unusually large amount of labour has been turned to unproductive use during the last year, and we feel, in the "tightness" of the money market, the natural result of such an abnormal state of things. England holds its place in the world by virtue of the superior aptitude of its citizens for turning their productive powers to account; it is this which has made London the labour-metropolis of the world, and it is which renders us even more sensitive than they are themselves to the losses of our neighbours. In their poverty they turn to the great storehouse of labour, and its representative gold, for relief, and imperious necessity obliges us to grant it. To insure our own prosperity, we are, therefore, forced to discourage wars and rumours of wars, abroad as much as at home; our position, if not our inclination, obliges us to become, as far as may be, the earnest advocates of peace. The knowledge of this necessity is not the least debt we owe to modern science. We can no longer sit by and smile at the wars or warlike preparations by which other countries are impoverishing themselves with self-gratulation on our own immunity. We are all, English or French, Germans or Italians, united by this tie of labour into one family, and when some of us idle away our time filling and drumming, the others must provide for them out of their own pittance.

But we do not live by bread alone. The increase of our capital is a great, but not the first, necessity. Right and justice are the nourishment of the soul of nations, and we must strive after them as earnestly as after the capital which feeds their bodies. Hence, therefore, while we are nursing mother of capital, we must at the same time be the highest good. There are times when wars (even wars, of course, just wars) must be waged, if only to secure the blessings of peace afterwards. We are no peace at all price advocates, but we protest, indeed, when we have to pay the price of war for peace. This is our present condition. A million and a half of able-bodied workers are idly maddened on the continent of Europe, not to fight out a quarrel, just or unjust, but to watch each other's movements, like the wild beasts whom a deluge has driven for refuge to a cavern. Better for humanity, for the great mass of labourers, that the continuance of such a state of thing would be a frank, if even a destructive war, and it is hard to see by what other agency than a storm the equilibrium of the political atmosphere can be restored. We, who have no desire but to be at peace with all mankind, are now paying a penalty, entailing the worst suffering of war, the ruin of peaceful citizens, as great, or almost as great, as if we were actually engaged in the gigantic plans of selfish aggrandisement, from which the present generation turns with such marred horror.

TELEGRAMS FOR THE MILLION.

IT is fit that a country which first set the world the example of a cheap, uniform rate of postage should set it another example, almost as much needed, of a cheap and uniform rate of telegraphic

communication. When Sir Rowland Hill first propounded the idea of a penny postage, those great obstructive potentates and powers—Routine, Officialism, Stupidity, Timidity, and Discrimination to change, took up arms against it, and attempted to prove, if not its impracticability, its recklessness and absurdity. But the idea took root, nevertheless, in the popular mind, and grew at last to the large proportions of a social fact. At our time of day it is scarcely possible to overestimate the commercial, educational, social, and other advantages which have resulted from this great but simple change in the habits of the people. But ought we stop at such a point, and be contented with having given the facilities that enable any man or woman in the British Isles to communicate with any other, at the rate of a penny per message? There are occasions, both of business and of affection, when the delay of forty-eight, twenty-four, six, and even two hours in the despatch of a message, may be perilous to property, or fatal to peace of mind; and the best managed post-office in the world (if ours were so, which it unfortunately is not), could not vanquish time and space, and send a letter from London to Penzance, or to Liverpool, faster than mail or express-trains could carry it.

The only agency for this purpose is that of the Electric Telegraph; and the idea has doubtless entered many minds, that a uniform and cheap rate for the conveyance of telegraphic messages to every part of the United Kingdom is one of the wants of our age and people, and the necessary complement of the Penny Postage System. But it is not the man who conceives an idea, or merely talks of it, but the man who carries it into execution, though it be the idea of another, that deserves the gratitude of our practical age. For this reason, gratitude is due to the founders and promoters of the United Kingdom Telegraph Company, who have undertaken to organize throughout the whole country the means of conveying telegrams at the cheap and uniform rate, irrespective of distance, of one shilling per message. We believe that the project will answer, for the very same reasons which have made the penny postage so triumphant a success. As yet, the British public can scarcely be said to make use of the telegraphic wires, except in the most urgent cases. The causes are threefold: first, the expense under the existing system; second, the fact that every railway-station is not a telegraph-station, except, perhaps, for the business-purposes of the railway itself; third, that messages, even when paid for and sent, are not delivered with the necessary despatch and regularity, but are often allowed to lie idle at one or the other extremity of the wire; and, last of all, the combined result of these three causes,—that the great bulk of the middle and poorer classes of the community are not familiar with the advantages, or even with the possibility, of such rapid intercommunication.

The new Company, which will be independent of the railways, and take advantage of the facilities afforded by the great lines of the canals, as well as of the highways of the Kingdom, proposes to remedy the three first defects of the existing system. If they succeed in doing so effectually, the last result will follow in due course, and the telegraphic wires will be employed in the United Kingdom as they are in America, on countless occasions of business, of affection, and of pleasure, where, under existing arrangements, no one ever dreams of employing them. When the rates of postage were costly and varying, not one letter was written where a hundred are written now; and when the cost of telegraphic communications is lessened to one shilling, perhaps to sixpence, each, we may expect that a similar result will follow; and that the wires, now occupied once in twenty-four hours by the costly message sent by a rich man, will be occupied all day and part of the night by the rapidly-succeeding messages and replies of the whole trading and travelling community.

THE GOUTY PHILOSOPHER.—No. XX.

MR. WAGHTAFFE IS ASKED TO STAND FOR HORSLEYDOWN, AND DECLINES.

ONE day last week I was waited upon at Wilbye Grange by a portly little gentleman, wearing gold spectacles, and a somewhat threadbare black coat, who handed me a letter of introduction from my friend the sitting member for Great Stumpington. Begging him to be seated, I asked him to state his business. This, however, he carefully refrained from doing, and he was only after half an hour's angling for his meaning, as if I had been angling for a heavy and experienced trout, that I succeeded, by dint of the utmost patience and perseverance, and, I may add, without conceit, of the highest and most delicate kind of skill, in eliciting the fact, that one or two of the tailors of Tooley-street, and some other influential inhabitants in that neighbourhood, had deputed him to wait upon me, and ask whether I would become a candidate for the representation of the borough of Horsleydown. Having been brought to this point, his mind seemed to be eased of a heavy load, and he discoursed thereafter with much greater frankness and fluency than before. In fact he opened his mind—if he had a mind for anything but the honorarium of an electioneering agent. "Now," said I, "Mr. Drooper," for that was the gentleman's name, "let us come to the point: do you think I have any chance for Horsleydown?" "Sir," he replied, "The Gouty Philosopher is well known to the constituency, and highly respected. The tanners know you, sir, and the publicans, and the men by the river-side. Your name will be a

tower of strength to the moderate liberal party. You may dash in just a little Radicalism, if you do it judiciously, and be all the better for it. There is a British pluck about The Gouty Philosopher that the people like. There is plain, common sense, about you, sir, that goes direct to the point, and that will stand no nonsense."

I felt rather pleased than otherwise with Mr. Drooper's estimate of my character; but being a man of common sense, as he affirmed, I directed this home-thrust at him. "And what is the lowest sum that a contest, if there be one, will cost me?"

"Well, sir; you might do it for £5,000. The late member, a gallant sailor, did it for half the money; but he was a very popular person, and a capital canvasser, besides being an uncommonly good hand at driving a bargain. It was pleasant to see the old gentleman making the round of the public-houses, drinking and smoking with every one who had a vote or could influence one, and spinning his yarns, mingled with sea slang and a dash of profanity, in twenty parlours and parlours in a night. Can your head stand such gin, sir, or beer?"

"Fought it out on both of them?"

"Can you smoke a clay pipe?"

"I detest, abhor, and abominate tobacco, in every shape."

"Well," he replied very deliberately, "that's a pity, as you might save at least a thousand pounds of expense, if you would drink and smoke with the people as our old admiral did. Perhaps, however, in spite of this drawback, you might come in at as low a figure as £3,500, provided always that you are sound on the Ballot question; that you will not offend the Dissenters; that you can pitch into the Pope; and know how to manage the public-house keepers."

"Does it not strike you, Mr. Drooper, that there must be roguery somewhere in Horsleydown, if so much money be spent, by an honest man, without bribery?"

"Horsleydown is a very large place, sir, and there is no bribery in the metropolitan boroughs."

"Nor corruption?"

"I will not say that. Corruption is a very wide word, and men are only men at the best. But ten thousand electors are not easily managed. A letter to each of them, enclosing your 'Address to the Electors,' would cost £100 at the least."

"Well, Mr. Drooper, if there were none but really free and truly independent electors in Horsleydown, I think, may I am sure, that I should esteem it a high privilege and honour to go into Parliament to represent them. I would forsake my wife and children and devote my days and my nights for half the year to the performance of my duties, and should feel proud of being a member of the highest and noblest legislative assembly in the world. But how can the electors of Horsleydown be free and independent if they want me to pay even as much as £500, say, or £100, for the right of doing such hard work—for which, if right were right, they would pay me? I don't want the Government to give me anything. I don't want to become a minister, or an ambassador, or the governor of a colony. I don't want a place or a pension for myself, or my cousins, or my protégés. I don't want to job the public money. I don't want a ribbon or a star, or a handle to my name."

I don't want to make or to listen to long speeches, unless as a matter of duty; and why should I spend £3,500 and smoke, and drink, and fog myself with canvassing the men of Horsleydown, and asking them for votes, which, if they were worthy of having and I of receiving, they ought to bestow upon me unasked! No, sir! If there were any public virtue in Horsleydown the decision of such a matter as this would not be left to the keepers of public-houses. No! sir! The principal men of the place, the men of property and character would, for the sake of their property and character, subscribe a fund among them sufficient to pay all the honest charges of the election, and bring their man in, free of expense. I refuse to bribe, to corrupt, or to treat. I refuse to hire countless committee-rooms, that are not needed, to bribe indirectly the publicans and gin-vendors. I refuse to feed a host of useless agents and lawyers. I refuse to shake hands with a drunken, dissipated, hectoring ruffian, who has just been beating his wife, although he should have fifty votes and not merely one. I refuse to buy up all the carts, carriages, coaches, wheelbarrows, and omnibuses on the days of polling. I refuse to drink gin and smoke filthy tobacco with anybody. I refuse to canvass in dirty holes and corners. I refuse to tell a lie to gain a vote. I refuse to bully the Pope to please a costermonger. I refuse to promise a mean fellow that I will ask the Minister to give his stupid son a place in the Post-office or the Custom-house. I refuse to pay my money without having my money's worth. And yet I should dearly like to sit once again in Parliament."

"There is no chance for you in Horsleydown," said Mr. Drooper, who had listened to me with evident impatience, "nor, I fear, sir, anywhere else."

"I am not so sure of that," I replied.

"But are you sure, sir—I say it with all respect and honour, and humbly beg your pardon if I be wrong—that you are not over fond of your money?" said Mr. Drooper, looking uncomfortable—as, doubtless, he was.

"Sir," said I, "I forgive your question. It was, I dare say, very well meant; and I have only this to state in reply: that I have a sum £10,000 in the bank that I do not particularly need, and that I will build a church with it—a grammar-school with it—ten ragged schools with it—a hospital

growth of the railway system, the closer intercourse now maintained with foreigners, and the rapidity with which mechanical inventions have multiplied within the last ten years, the coming exhibition will be even more successful than that of 1851.

At the annual *conferé* of the Wakefield Mechanics' Institution, held on Tuesday evening, Mr. Bright delivered a long manifesto. He again deplored the ignorance of Political Economy, not only manifested by the members of mechanics' institutions, but by persons higher in the social scale. In alluding to the French Treaty, he expressed a belief that fourteen years hence it will be looked back upon as a step in legislation no less advantageous than the Free-trade measures of 1846. The working classes of this country are still far less prosperous than those of America; and Mr. Bright stated that he knew of only three reasons which could account for the fact. The first of these is the absence of feudal laws in the United States; the next, the excellent instruction provided in the American schools for the people at large; and the last is the fact that our Government spends annually sixty millions more than that of America, although the population of the two countries is nearly the same. Upon all of these points we may have something to say hereafter, in reply to the over-confident—if not ignorant—assumptions of the orator.

From the official return of railway accidents, made three months ago, for the first half of the year 1860, it appeared that during the whole of this period only six persons had met their deaths on British railways from accidents beyond their own control. The return for the next six months will present a very different picture. Railway catapheges of the most fatal character continue to succeed each other in rapid succession. On the morning of Friday week two trains were passing in the same direction, along the London and North-Western Railway. One was a slow train, consisting of thirty-one carriages, of which twenty-six carried cattle, three goods, one the railway guards, and another the cattle-drivers. The other was the "limited mail-train," from Glasgow, driven of course with much greater speed than the one preceding it, which was meant to be "shunted" off the line to allow it to pass. This operation took place too late, at Atherstone, in the Trent Valley, just as the mail-train came up. The guards' van and drivers' van were still standing on the main line, and the result of course was a collision. The carriages were shattered to pieces, and ten men were killed. The passengers providentially escaped unharmed.

Garibaldi has won the hearts of the British people, as well as of the Italians. On Monday, the 12th current, a meeting was held at the Terminus Hotel, Brighton, at which it was resolved that a penny subscription should be opened, to collect a fund for the purchase of a testimonial to be presented to him. Another meeting was held on Monday last, in the Town Hall of the same place, in order to raise a local subscription in aid of the Central Garibaldi Fund. In the course of the proceeding, Mr. Crawford, P., stated that 750 volunteers had been shipped for Italy, and that this expedition had cost from £10 to £16 per man, whereas the Crimean expedition cost our Government something like £1,000 per man. The central committee have now but £1,500 in hand towards £13,000 or £14,000, which they require to raise.

It may be recollected that when Captain Styke made his appearance in this country as an emissary of Garibaldi, an attempt was made to prosecute under the Foreign Enlistment Act, Mr. Langley, the editor of the *Newcastle Chronicle*, who had inserted in his paper some articles favourable to the formation of the Italian Volunteer corps. The case being dismissed, Mr. Crawshaw, the plaintiff, threatened to carry his complaint before a higher tribunal; but it was generally understood, that good advice, and a sense of the absurdity of such a course, would have put an end to all further proceedings. It has not been so, however. On Monday last, Mr. Bovill, as counsel for Mr. Crawshaw, applied to the Court of Queen's Bench for a rule nisi, calling upon Mr. Langley to show cause why a criminal information should not be exhibited against him, for a misdemeanour committed by him against the Foreign Enlistment Act and the common law of the land. The Judges refused the application, on the ground that the law officers of the Crown were the only persons entitled to prosecute under such circumstances. The Lord Chief Justice thought it would be better if the Volunteer principle were confined to the excellent limits hitherto imposed upon it—the necessity for Volunteer Attorneys-General not having yet arisen.

A proposal to lay down a stone tramway in Oxford-street, in anticipation of Mr. Train's scheme for the formation of a street railway, formed the subject of a report by a committee laid before the Marglebone Representative Council, on Saturday last. The report recommended that the consideration of the new scheme should be delayed for three months—the vestry having previously given a pledge to Mr. Train not to re-introduce the subject of tramways for the same period.

The progress of the *Empress Eugénie* has excited much interest during the past week. She travels incognito, accompanied, however, by several distinguished persons belonging to the French Court. After remaining a short time in London, she proceeded, on Friday afternoon, by the Great Northern Railway, to the north. On Saturday morning, she visited the cathedral at York, and other places of interest in the city, and received everywhere a hearty and respectful welcome. By the afternoon train she proceeded to Edinburgh. On the Sunday she heard mass at a Roman Catholic church, walking from her hotel in the midst of a fall of snow. On Monday she visited the Palace of Holyrood, the Castle, and other places of interest. She has since been to Melrose and Abbotsford.

MONEY AND COMMERCE.

A REFERENCE to the daily journals will convince the public that, for the moment, all commercial interest centres in the money-market. The daily variations in the funds are noticed, the reports from the different manufacturing districts and of different markets are published as usual; but the almost invariable observation is "little business." Prices are dropping, sales dull, everything uncertain, in consequence of the changes already made, and the changes still feared in the rate of discount. The condition, then, of this market now occupies the exclusive and pre-eminent position in the public mind which the corn-market occupied three months ago; and therefore it may be inferred that the monetary effects of the derangement are equivalent to those of a bad harvest. Thus, however, the course affairs was likely to take could be pretty correctly foreseen, and measures were taken to meet the contingency. So accurate, indeed, was the judgment formed that the price of wheat to the present time was rightly estimated to within a very few shillings, and the area to which the merchant could extend his orders, and the limits be prescribed to them were, by circumstances, effectually defined. There was no uncertainty.

Now every kind of commercial dealing is rendered uncertain by the changes in the value of money, and we have on Cobden to marshal us on to get the error corrected. Nay, if we do not mistake, the Free-trade hero is not a free-trader in the business of banking. He and his friend and colleague, Mr. Chevalier, who has not reached the high level of Bastiat, are for restrictions on this part of our commercial life. We cannot, therefore, look to them, or, as far as we know, to any other scientific economists for help and guidance. If there be something seriously wrong in our legislation relative to banking, the mercantile community must seek elsewhere for leaders.

It cannot fail to strike the public as curious and interesting that there should now be an alarm in Europe, and especially in England, at a want of gold, when the stock in the world has been, within the last ten years, so much increased. Not long ago Mr. Chevalier wrote a book to describe the augmentation, and argued that a great appreciation of prices affecting all fixed incomes, and making legislation on the subject imperative. Mr. Cobden translated the work, and at that period, and for many months before, there was a general alarm lest all property should be destroyed by a great fall in the value of gold from its abundance. All at once there is a great alarm in the other direction, and trade is deranged because there is not gold enough in the Banks of France and England. Trade is demanded to procure them a supply. We have had no such alarm about corn since the trade in it has been free, and we can only suppose, therefore, that this extraordinary and troublesome change in the value of currency is the consequence of bad regulations. The annual supply of the precious metal has of late been somewhat less, but the decline has been gradual and steady. Bastiat, too, has been steady; while the fluctuations in the rate of discount have been great and alarming.

The great event of the week, announced in all the journals, is that an arrangement has been entered into between the Bank of France and the Bank of England by which the former is to receive from the latter a loan of £2,000,000 gold on a deposit of silver to an equal value. This arrangement seems to have given satisfaction to several writers of City articles, who speak of it as the wisest possible arrangement under the circumstances, and as not unlikely to lead to an early reduction of the rate of discount. As the real want is of capital, we could understand their satisfaction were the £2,000,000 an addition to the capital of the two banks; but as the great fear is a want of the precious metals, which equally affects both, we cannot understand how commerce is to be in the least degree benefited by the exchange. Particularly, we cannot understand how writers who have referred all the difficulties of the money market to the excessive expenditure of the French Government, should expect that all at once to be removed by this kind of mutual agreement of the banks.

If, indeed, as we frequently said, the difficulties arise from a contest between them to get gold, we can understand that their agreement as to the share each shall have of the monopoly enjoyed by both, should tend to a reduction of the rate of discount and the relief of trade. At the same time it must be expected—from the fact that for many months the Bank of England has had no silver ballast in its possession—that it will be unable to keep what it is now to acquire. For many months gold has been continually sent to the continent of Europe to purchase silver to be sent to the East; and if the demand for that quarter ceases, the probability is that henceforth the silver will be taken from the Bank of England, instead of being bought on the continent. It cannot be met as currency here, and as the price of silver—because its utility is depreciated, and the utility of gold is appreciated by our currency regulations—is higher in several other countries than in England, it will flow out of the Bank like the silver it formerly held.

We cannot, therefore, join our contemporaries in expressing a conviction that great benefit may be expected from this cessation of the conflict between the rival banks. It will not add one atom to the disposal capital of either country, but will enable the Banks to settle more beneficially to themselves, whatever may be the amount of capital to be lent, the rate of discount.

The demand for money, in consequence of the uncertainty of obtaining advances, has been considerable throughout the week, and though there is plenty of capital, as proved by the low bills being negotiated at a fraction below the Bank rate, bills of a doubtful character or a long date have been, we are informed, not negotiable on any terms. If the negotiators of the trade do not suffer, those in a less dignified position feel great inconvenience.

Canals and other stocks generally improved on Wednesday, and subsequently were strong. Railway shares too, particularly the Midlands, improved. Some trade circulars speak of the late advance in the rate of discount as a "thunder-bolt" to trade, which is seriously affected for the moment, though otherwise in a sound condition.

A project much favoured just now, is that for developing the resources of a large estate on the Great Kanawha River in Virginia.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

The misunderstanding that clouded the arrival of the Empress Eugénie has been cleared up. The descendant of the Kirkpatrick's, at his home already in "and Beekie," where she has been honoured with all the respect and affection due to her many virtues, and the unaffected grace of her demeanour. It is to be hoped that the skill of Dr. Simpson has already dissipated the apprehensions, which had their origin in the loss of an only sister, and that the air of Hamilton Castle, and the retirement so needful to the restoration of her spirits, may complete the cure which seems already to have fairly begun. Hamilton Castle is a princely residence, and full of most valuable articles of taste and value, the accumulation of many years. In spite of the wintry season, Scotland possesses no many objects of interest, as to form in itself an inducement more than sufficient to entice a wanderer in search of health and change.

There was an absurd mistake committed yesterday by an official of the South-Western Railway, who telegraphed to London the arrival of Napoleon III., who was duly waited for by the authorities of the railway and a considerable body of police at the South-Western station.

The most important matter of foreign intelligence of the week, or, indeed, of many a day, is the certainty of Mr. Lincoln's election to the Presidency of the United States. This result has been expected for some time, but until its actual accomplishment, could not be looked at as a certainty. The Democratic party have been so long in possession of the supreme authority in the Union, and have abused their power so thoroughly, that there was no knowing what trick would be played. Although the North and West have long been the most numerous as well as the most intelligent politicians in the States, they have been baffled by the unscrupulous and corrupt electing tactics of the Pro-Slavery party, who had all the sympathy on their side, and appealed so often with success to the sacred rights of property, and the necessity of maintaining the democratic institutions of the Union. They have generally managed to divide the Republicans, who, however, have held together this time, and secured a complete victory. They tried to work on the fears of the moneyed classes; but it seems that the hollowness of the threat of "separation" is as well appreciated on the other side of the Atlantic as it is here.

The victory is to the West for the first time—a not insignificant indication of the important part, which the New States are destined to play in the future government of the country. The fact of Mr. Lincoln being a Western man, however, was only one source of his success. Fame pointed to Mr. Seward, the foremost statesman of America; but his eminence and the boldness of his speeches against slavery, made him a less safe candidate than Mr. Lincoln, who was more moderate in his views, as well as in his reputation. Mr. Seward, if he did not accept the post of Ambassador to the British Court, will be the new Secretary of State, and the virtual ruler of the Republic for the next four years.

Mr. Douglas, the most eminent man on the other side, was thrown over by the more violent slave-owners; but he had not—like Mr. Seward—the distinguished magnanimity to give way, and he polled as many votes as the present Vice-President, Mr. Breckinridge. The Democrats did not hope to put either at the head of the poll; but they expected that Mr. Lincoln would fail in securing an actual majority, and that the election would fall to Congress, in which the Pro-Slavery party preponderates. They may, by means of this majority in Congress, attempt to thwart the liberal policy of the new Government; but time and patience will cure many of these evils.

It is a curious fact in this struggle, that ten years ago Mr. Lincoln was defeated in the contest for Senator of their native state of Illinois by the Little Giant, as he is called by his friends; but here the great lawyer was at home, and it is dangerous to "bait the lion in his lair, the Douglas in his den." From many causes, the politics of the United States will be more interesting to English readers than they have ever been.

When Mr. Bismarck was the American Minister in London, he was in the habit of praising what he called the "Great English Institution" of good dinners to settle all affairs of moment. I am glad to see that Lord Palmerston is resolved to keep up the good old English practice, having given the first Cabinet dinner of the season yesterday at Canterbury House.

The ex-King of the Two Sicilies still lingers at Gaeta, shut up in a corner of the fortress with his wife and brothers. The queen-mother has fled to Rome, and the generals are falling off. All these are symptoms of a final break-up. The conquerors seem disposed to spare the remnants of the defeated troops as much as possible, doubtless with the expectation of making use of them by-and-by.

The restoration of the British Embassy at Vienna, which is prematurely announced, but which has been resolved upon some time, has given great satisfaction to the Austrian Court. An ambassador is accredited to the Sovereign, whereas an envoy communicates with the ministers. This is all very well in a constitutional government, but in the case of an autocracy like Austria it has been found inconvenient, for the ministers were not responsible, nor always to be relied upon. Much as we may have to complain of Austria, she has often been a useful ally, and may be so again.

The staff of the British mission is ordered home from Naples, and has probably taken its departure ere this.

The *Gazette* of Tuesday contains the promotion of the three officers who distinguished themselves at the storming of the Taku Forts. Lieutenant Rogers and Bursden are made Captains, and Ensign Chaplin, Lieutenant, all without purchase. Mr. Chaplin is only 19; he is the son of the late Mr. W. J. Chaplin, M.P. for Salisbury, and Chairman of the South-Western Railway. He had a bullet through the arm, and received in the thigh, in spite of which he had a race with a Frenchman to see who would first plant the colours on the walls. It is well to see such patriotism promptly rewarded.

A very graceful act was quickly performed by the Queen, in inviting the

American ambassador and Mrs. Dallas and Sir Edmund Hood, on a visit to Windsor, to meet the Prince of Wales. There is no truth in the statement that Mr. Wood, the *Times* correspondent, whose pen rendered the visit so much more memorable than it might otherwise have been, was included among the guests.

Whilst we tender all due acknowledgments to our republican friends across the Atlantic, we must not neglect our Canadian subjects, who deserve all our care. The resources of Canada are much beyond what is generally supposed at home. She needs only capital and population to develop her vast natural wealth. I have just seen a letter which describes some large discoveries of gold and silver in Lower Canada. Although she is not in a condition to adopt free trade without reserve, in close proximity with the restrictive policy of the States, she does at least seem to be open to her ports, and increase her commerce, in which she deserves all the help that we can render.

The new magazine, *Temple Bar*, will be published on Monday next, and will probably excite general attention, no less from its bulk (it is sixteen pages larger than the *Courier*) than from the quality of its contents. The editor, Mr. G. A. Sala, contributes the first instalment of his "Travels in Middlesex,"—a district where he is thoroughly at home, and of which his quaint gossip will doubtless be pleasant and interesting. Mr. Ouseford sends a scholarly essay on "The *Skaldic*, the Great Epic Poem of the Poets." and the Rev. J. C. M. Beloe gives a sketch of his travels in the Holy Land, the first portion being "Over the Lebanon to Haifa." The first instalment of a story by a lady author, "Notes on Circumstantial Evidence," "Soldiers and Volunteers," "Criminal Lunacy," a notice of the "French Newspaper Press,"—will also be found in the number, the most noticeable feature in which, however, will perhaps be a review, from early proofs, of Mr. Hepworth Dixon's forthcoming "Biography of Lord Bacon." Nearly 150 pages of such matter for one shilling ought to command a large success in these days of cheap literature.

The candidates for Southwark have divided into one local (Mr. George Secrett, the great wharfinger), and one exchequer (Mr. Everett). The latter is strong blind, from an accident on shooting, after which he became Third Wrangler at Cambridge, and Fellow of Trinity Hall. He is a remarkable man, and a sound politician; and although he would have some difficulty in meeting the *Spencer's eye*; the country might be the better for his services in Parliament. Mr. Layard is in some request, but he has declared against disturbing any candidate on the Liberal side.

In Pembrokeshire I am told that there will be a contest for the seat vacated by Lord Enlyn, called to the Upper House, between Colonel Owen (Liberal), son of the Member for Pembroke, and Mr. Lloyd Phillips (Conservative), brother to the Member for Haverfordwest.

THE MURDERER MULLINS.

UNDER the head, of "Murder," in our No. 18, in describing the circumstances of Mullins's trial, we noticed the prisoner's adroitness, in availing himself of some of the judge's observations on the nature of circumstantial evidence, and, even in his then awful position, most craftily endeavouring to divert the minds of the jury from the damning proofs against him to the accidental and incoherent notions with which he was then getting up in a called, (perhaps) rather overbold. An acute Old Bailey attorney could not more promptly have seen the possible effect of this course—it was to mystify the clear and direct evidence by mixing it up with collateral notions, ill-supported, and tending to confuse the great facts they were intended to corroborate. The cunning with which this chance was seized and acted upon, struck us at the time as absolutely wonderful as an example of human ingenuity, in such a person and in such a situation.

But the impression upon us has been stamped yet more deeply, by reading the statement written by the criminal, and placed in the hands of the Sheriff on his way to execution. It develops the character of the individual in a most remarkable manner; and enables us to look, at in a glass, upon the commission of the murder and all the after proceedings of the murderer. The equivocation is equal to any jousting that could be invented. To the very last of the preceding week he had his utmost to throw dust in the eyes of these humane functionaries. Yet he dared not second the scaffold with a direct lie in his mouth; but he would try to deceive the world and play fast and loose with his Maker. It is an extraordinary paper. It does not deny his guilt though it appears to do so. Again, he overrules his mark; or rather, he does not aim at the mark, which could toll on his behalf. He shows his weakness by contradicting him, "through the most gross and false perjury that was ever given in a court of justice." What witnesses, and to what points? The perfectly immaterial! The story of the old boat, and the account of two men, Bunsant and Mitchell, who believed they saw him on the morning after the murder.

These things were put out of court by the judge in summing up, and did not weigh a feather with the jury. These men did not make his wife a widow nor his children fatherless. Even if they had been perjured, they did not affect the verdict in the least degree. It is also curious to remark the absolute "solicitor's declaration" of Mullins respecting the occupation of his time on Monday, Monday evening, and the night till Tuesday morning; and still more remarkable, his plain reference (as if he knew) to the "murder which has been committed on the night of the 13th of August, at Grove-road," &c. It is true that every particular pointed to this period as that at which the dreadful tragedy was enacted, but it is strange that Mullins should, as it were, casually confess it, seeing how much he relied on the testimony of an imbecile old woman, that she had seen the paper-room occupied by some living being on the Tuesday morning. His belief that Egan was innocent of the murder, is the only redeeming feature in this unparalleled confession; for such it is. The erosion on the brick of the grave has this alone as a symptom of corruption which forced the future. The misdeed and confusion of the day he grouped at once, and he has clung to it to the last. While yet there was a hope from the assertion of innocence, God was invoked to witness that he was innocent. When in communion with his spiritual adviser,

he is warned of his soul's peril, should persist in false accusation and falsehood; his alarm is more terribly awakened, he abandons the poor fellow he had attempted to destroy—he perplexes the evidence to raise a doubt—he charges blank perjury, without a direction to impeach one syllable that told against him—and beyond this he dies and makes no sign. Facing the world to come, he does not deny the cruel murder of Mary Kinsey.

MODERN ARTILLERY.

As we stated awhile ago, the question of supplying war-ships with efficient mail coating is intimately connected with that of the present and future of artillery. Practically the two cannot be separated; hence iron-sided ships having been discussed, we now purpose to deal with guns.

To clear away certain misconceptions which, in the matter of gunnery, have arisen, we fitly noted, once for all, that ordnance and ordnance projectiles, like men, have their specific faculties. The very best ordnance, and ordnance projectiles, when the demolition of stone ships is in question, are in the very worst when the problem arises of demolishing stone walls. A cannon best of all adapted to the specialty of looking down upon the sea from an eminence, and plunging shot and shell directly at an object, may turn out to be a very inefficient gun if planted at the sea-level. Mortars are amongst the most terrible of all war-engines gunpowder nurtured for demolition of fortresses and of towns; but they are of no avail as between ship and ship, or fired from land against a ship; therefore these illustrations—very few out of very many—cause it to appear that any vanishing of any particular gun of Mr. X or Y for a gun of general competence, is pure fallacy and delusion. Referring to this point, we cannot but express our opinion, whether or not rifled ordnance, supposing their manufacture possible up to large dimensions—whether such rifled ordnance would be likely to perform all the necessary functions to which unrifled guns of equal size are competent. It is impossible to read much of the rifle ordnance controversy which has been long going on without becoming convinced of a certain popular belief that rifle cannon (were they possible) would be better for all purposes than any other ordnance. The origin of this popular sentiment is not difficult to arrive at; and at a first glance it is one which seems based on analogy and reason. Undoubtedly a rifled small arm is better than an unrifled small arm for every purpose to which a military small arm can be applied. This is conceded. Then why is not a rifled cannon necessarily better than a smooth-bore cannon? Consider what each has to do and we have our answer. A small-arm rifle-bullet has to go straight at its object, penetrate, and kill. No more is expected of it. A rifled ordnance projectile is expected to do much more; unrifled cannon to accomplish much more; but their rifled antagonists have some shortcomings. And here it must be remarked, once for all, that the projectiles of rifled ordnance are now all elongated. For various reasons balls, properly so called—spherical missiles—are objectionable, and being so, are not employed.

First, then, a rifled-ordnance projectile, for reasons which we illustrated in our last article, alters its position of impact for every angle of elevation. It is all very well to talk of the punching-power of a rifled flat-headed bolt; but a punch can only do the work of a punch when it strikes end foremost. This is one thing that a rifle-bolt will do, cannot do, if the trajectory passes ever be at all considerable an angle to the line of sight. This is the inability of rifle shot or shell to ricochet in a straight line. This is a functional incompetence: in one no way dependent on elongation of projectile, but immediately dependent on the very principle of the rifle-gun. In these days of rifle volunteering, it would be almost an insult to public intelligence were we to explain in what the rifle principle consists. We will take the point for granted that everybody is aware of the following facts, viz.—A rifled bore is a hollow screw, which imparts a rapid rotatory motion on any projectile discharged from it. Being so, we have now to consider the necessary consequence of a projectile rapidly rotating on an axis coincident with the line of flight, falling upon a horizontal plane, grazing that horizontal plane, and again passing on. Until it strikes land or water at the first graze, it never wanders from the vertical plane of its trajectory; but no sooner does it touch land or water than it assumes a lateral deviation in the direction of its rotatory spin. Rising again, it proceeds on a vertical plane, making an angle with the vertical axis which it assumes it will not be deflected; and so for every subsequent graze there is another amount of lateral deviation.

This lateral deviation of ricochet is participated by all rifled guns, and it is a serious disadvantage. On land, no less than at sea, the demolition wrought by shot, and certain varieties of shell, which they discharge, and which the bounds is very great. When, during the progress of a siege, the dismantling of the enemy's guns is sought, the object is obtained by ricochet. When the approach of hostile boats is contested from the coast, the mode of firing generally relied upon is that of ricochet. When two vessels at sea are somewhat uncertain of their mutual range and the weather hazy, ricochet practice is a favourite expedient. In short, whenever the extreme penetrating force of a projectile is not wanted, and when the gunner desires to compensate for any inaccuracy of laying the gun, by the substitution of a moderately accurate grazing flight for one of absolute correctness, the expedient is ricochet practice. Now, rifled projectiles are endowed with no accuracy whatever of ricochet; it is not in them and cannot be got out of them. It is not a question of this man's rifled gun or that man's rifled gun. All rifled guns are similarly circumstanced.

There are certain conditions under which the ability to accomplish straight ricochet firing would be thrown away—when long range is all in all; thus certain coast batteries are so high above the water-line that ricochet practice from them would be impossible. On the power of direct firing they must rely, and that alone. An armament of mortars would be useless; there would be only the remotest probability of hitting a ship with a shell vertically fired. Nevertheless, shells and very heavy shells, seem, as we explained before, the projectiles of greatest promise for accomplishing ship demolition. They must be rifled shells, and for two sufficient reasons. Even were non-rifled shells possible up to the dimensions required, non-rifled guns could not be made of bore large enough to hurl them. Were such guns and shells possible, the accuracy of ricochet to be accomplished by non-rifled ordnance is

so inferior to the accuracy of rifle flight that rifled ordnance must have the preference. Here, then, is a condition altogether in favour of rifled guns.

Can red-hot shot be fired from rifled ordnance? Armstrong's principle clearly does not admit of this practice, for the simple reason that the Armstrong shells are enveloped in lead. Whitworth's principle does admit of it; but then, practically, cannon on Whitworth's system are out of the field, because of their general incompetence. So great is the windage between bore and projectile, that the flight is most inaccurate. Thus at Southport, last summer, nearly one hundred shots being fired from Mr. Whitworth's breech-loading guns, at a target 1,000 yards distant, the target was not once hit; and, more unsatisfactory still, a field-piece muzzle-loader—Mr. Whitworth's latest invention—being tried at Woolwich, not a fortnight ago, failed to hit a target twelve feet square, eight times out of thirteen, though the distance was only 600 yards. The public are under a great misapprehension concerning the Whitworth ordnance. It is commonly assumed that Mr. Whitworth's cannon shot and shell fit the bore accurately, just as the case with the Whitworth small arms. The very reverse is the truth. The fit is very loose; in other words, the windage is enormous. Of late the Prussians have been trying experiments with *paper models* as they call them, rifled shot and shell. The scheme answers moderately well already, and it promises to answer much better. Of course the firing of red-hot shot coated with paper envelopes would be an impossibility; and generally it may be said that red-hot shot must be abandoned if rifled great guns be adopted. We are aware that much stress has been laid of late on a shell-charge of molten iron instead of red-hot shot. Very terrible are projectiles of this sort where the principle can be adopted; but it does not answer well if the mass of iron be not considerable; and whatever the mass, the principle answers best with a spherical, or non-rifled shell. Test the rifled principle fully and dispassionately as we may, the fact at last comes out that a rifled gun is a special arm. It will do one thing better than any other cannon, but only one thing. It will plunge a solid shot or a charged shell plump at an object, more directly and at a longer range than any other cannon; but it will not readily do ought else, and some things it cannot be made to do at all.

We have appended illustrations of the Armstrong and Whitworth shells. Of the latter there is little to be said; but the former is very ingenious.

THE ARMSTRONG SHELL.

This projectile consists of a very thin cast-iron shell, the interior of which is composed of forty-two segment-shaped pieces of iron built up in layers around a cylindrical cavity in the centre, which contains the bursting-charge and the concussion arrangement.

The exterior of the shell is thinly coated with lead, which is applied by placing the shell in a mould, and pouring melted lead around it. The lead is also allowed to percolate among the segments, so as to fill up the interstices, the central cavity being kept open by the insertion of a steel cone. In this state the projectile is so compact that it may be fired through six feet of solid timber without injury; with its resistance to a bursting force is so small that less than an ounce of powder is sufficient to break it in pieces. When this projectile is used simply as a shot, no preparation is necessary; used as a shell, the bursting-tube and concussion arrangement must be inserted together with a time fuse. Everything being properly adjusted, the moment for explosion can be insured with the greatest nicety. It may be made to explode at the mouth of the gun as a "cannon," or at any fixed distance. One of these shells has been burst in a closed chamber, where the pieces were collected, and consisted of 106 pieces of cast iron, 99 pieces of lead, and 12 pieces of fuse, &c.; making in all 217 pieces. It is so uncommon thing for one of these shells to make 100 holes in a column of targets at a distance of 3,000 yards.

THE WHITWORTH SHELL.

Showing the oblique and screw-form cuttings in the surface, by which the revolving motion is obtained.

Theory and experience go to prove that, taking conditions as they are, or rather as they were before iron-mailed ships came on the record, marine war-

structure stood on very unequal terms with land war-structures. Will this disparity hold good in future, accepting the iron system of defence as a reality? Why not defend land batteries with iron too? Is a question to suggest itself. Literally, doubtless, land batteries can be thus defended—will be thus defended, if we have about the sky defence of land fortresses! Except they can be roofed in with bomb-proof iron, there will be no safety against vertical fire—against the attack of mortars. Mortar-firing, be it noted, is of no avail whatever against so small an object as a ship. And now one deduction: whether it be satisfactory, we do not know, but it is safe to conclude that the possibility of sending a shell through one side of an iron-encased vessel, the results would be far more disastrous than were the sides of wood. Many shells fired horizontally go through and through, bursting afterwards. Could their bursting be ensured within a ship, the effects of shell-firing would be more terrible than they are. And this would be the terriblest of iron ships. Shells of present dimensions are harmless against them. The solid shot alone of guns, of the dimensions and power guns now are made, can perforate them, and this only at short ranges. Given shells sufficiently big, and guns competent to launch them, no plate of iron or steel that ship could bear would resist the horrible shock. Given these conditions, wooden walls would come to reign again; except, perhaps, for a few special purposes. It would be the old tale of helm and cuirass repeated. Heavier and heavier they grew up to the point of absolute abandonment. For ourselves we believe iron plate covering will be a reality on shore as a facing for embrasures and a covering for masonry towers, when iron-armed ships shall have become things of the past. And masonry, we believe this for the reason that whereas the requisitions of flotation and steering impose a limit of thickness and of weight for sea uses, there are no land limitations of the sort—nothing sets the limits imposed by the finality of manufacturing skill. Practically we believe masonry towers will be the most efficient and formidable means of coast defence. Built in bulk, and made too heavy to be almost safe against mortar practice. They are invulnerable, they would hold forth rifle shell of dimensions big enough, and of charges heavy enough, to smash to pieces the strongest naval structures.

DRAMATIC STRUCTURE.

SPACIOUS, desirable in all works of art, is indispensable in a drama. A house may be very comfortable, and may even look picturesque, with a crooked wing, a large portico to a mean facade, and heaps of clumsy chimney-stacks, destroying the line of roof. You may be able to dive through a broken perspective of damaged flower-vases. It is possible to forget the peculiarities of *Norah's* form in the bewildering lustre of her eyes, or the brilliancy of her spirits. But nothing can compensate for want of symmetry in a play. The audience are sure to feel the deficiency, even when they are unable to determine exactly where it lies. The dialogue may be close and sparkling, the characters skilfully drawn and strongly contrasted, and the scenes may abound in telling situations; but unless the plot be carefully constructed, so that the dramatic balance is there in the first instance, there is no chance that the play will keep permanent possession of the stage. Shakespeare is our great exemplar in this as in everything else. The structure of his plays is perfect. The plot always takes its spring in the first act, and terminates naturally in the fifth. The only remarkable exception, perhaps, is "*The Merchant of Venice*," where the spring of the action is in the second act, and the conclusion is in the fifth. Of all dramatic writers Shakespeare is the greatest master of the art of action. The plot is always enclosed and equally distributed within the limits of the acts. It always begins and ends upon the stage. *Romeo* falls in love with *Juliet* in the first act, in the presence of the audience. *Macbeth* encounters *Macduff* in the first act. *Macbeth* encounters the *Witches* and *Humbly the Ghost*, in the first act. And so on throughout all the plays, obeying a law by which the vital interest is created and sustained with unvarying effect. Nor is this all. Nothing is considered by Shakespeare to description that can be acted before the eyes of the spectators—one of the subtle secrets of his power over the sympathies and emotions of his audience. Most of his plays would almost bear to be denuded of the dialogue, and reduced to the bare exits, entrances, and stage directions, to be acted in pantomime, so completely is the story told in the actual look of the scenes.

It is curious enough, and a fact that some of our most effective modern plays, in which stage art is supposed, not without reason, to be successfully illustrated, are defeated by conspicuous faults of structure, while inferior pieces, which are not considered to take rank amongst the best examples of art, are seldom distinguished by their structural ingenuity. The modern comedy, or musical, is entirely dependent upon language rather than movement, substitutes isolated effects for continuous action, and disappears in the end the promise of the opening; while the genuine melodrama, where language goes for nothing, and effects are not the exception but the rule, is generally built up with a vigilant attention to the progressive rise of the action, which becomes heightened and intensified at intervals. The comedies of Mrs. Inchbald and the plays of Sheridan Knowles offer striking examples of defective structure. Mrs. Inchbald's comedies invariably open well, but almost invariably fade into weakness and confusion at the close. *Wives as They were* and *Maid as They were* begins with a forcible burst of real life and bright animal spirits, and ends with an abundance of false sentiment and melodramatic extravagance. In Sheridan Knowles's plays, we believe without a single exception, there is always an act too much, first or last, which we may venture to call, without being suspected of a bad joke, an act of supererogation. The plot of *The Wife*, for instance, begins in the second act, and the catastrophe of *Utriqué* takes place in the fourth. Such blunders as these are never to be detected in the "perfect structure" of a lower stratum. Whatever else may be said of pieces like *The Plowers of the Forest* and *The Corsican Brothers*, they have, at least, the merit of being skilfully put together.

The new melodrama at the Lyceum, with the long title of "*Adrienne; or, the Secret of a Life*," partakes, in some measure, of the merits of its own class, and the defects which are more generally found in a higher order of drama. It observes the melodramatic tradition, in so far as it has an interesting story kept in constant motion; but it follows the example of its more respectable prototype by falling into an abyss of obscurity and tediousness

when it comes to the unfolding of its mystery, and the gathering-up of its scattered threads of plot. There is a rich young lady who has a terrible secret on her mind, the conscious shame of which makes her reject the hand of a poor artist who she loves. Another suitor, who was her lover for her wealth, and who knows her secret, threatens her with exposure if she does not consent to marry him. A duel ensues between the rivals. The mercenary suitor is severely wounded, and is just about to declare who the lady is—that being the secret—when she suddenly appears, and, to save her credit, announces that she is his wife. This is the first act, and the situation is one of a complex picturesque character; and the curtain descends upon the first act amidst thunders of applause. In the second act, the lady is living in a lonely castle with her husband, who is still suffering from his wound. He discovers that he has been made the victim of a process of soul poisoning; but he makes the discovery too late to do anything. In the third act, he denounces his wife as his murderer. Here again is a tableau, which finishes act the second upon the improved principle. Up to this point the interest is sustained, and there is no lack of legitimate melodramatic excitement; although it must be owned that the second act is not so neat or compact as the first. But from the moment the curtain rises on the third act to the end of the piece, we are all abroad. The author appears to have been reduced to the last extremity in his efforts to get his characters out of the meshes in which he had involved them; and his salvation of the difficulties bears all the traces of mental desperation. The lady flies to the mountains to escape from the officers of justice, and is made prisoner by the captain of a troop of soldiers, who turns out to be her old lover, the artist, who has evidently entered the army for the purpose of coming in exactly in the nick of time to bring about the conclusion of the play. He has taken prisoner a certain brigand, and this brigand no sooner sees the lady, than he declares a fidelity to her, and attempts to kill the captain. Here again we believe, to the majority of the audience; but which was understood to relieve her mind concerning the secret that had been weighing upon her all throughout. Another individual eludes her of the charge of murder, and immediately afterwards commits suicide. The reader need not be informed that, under these favourable circumstances, the artist offers his hand again, and is not rejected this time.

There would be no objection to these incidents, if they were consistent with the expectations raised by the early part of the piece. They have the true ring of the melodrama. But they do not fall skilfully into their places. They betray a failure of ingenuity on the part of the author, who has been having his friends him up to the second act, suddenly becomes paralyzed in the third. We are not criticising this piece on any grounds but that of structure. The dialogue does not appear to differ in any essential particular from the dialogue of a thousand other stalling plays we have seen and forgotten; except, perhaps, that it is quicker, sharper, and comes more promptly to the point than most of them, which is a merit. And the characters are drafted from old stocks, with which everybody is acquainted, and are none the worse for the transplantation. The mystery, so long as it remains a mystery (which, we admit, it does still for us), is as good as any other mystery in the drama. It is a mystery, and it is a mystery, and it is broken, and his well expressed. The fate of this work ought to be a warning to future playwrights. Whatever they do, let them remember that the one thing to be kept in view, even at the risk of losing everything else, is climax. The best play, animated by the noblest sentiments, the finest poetry, and the most interesting incidents, may be wrecked in sight of land, by drifting in the last scene into an anticlimax.

SKETCHES FROM HUNGARY.—NO. IV.

[FROM OUR OWN CORRESPONDENT.]

THE tour of exploration which I had been induced to make to the shores of the Platten See, had proved so full of interest and agreeable incidents, that I determined to extend my wanderings in Hungary in another direction; and with this object I left Pesth one night afterwards, in a light wagon, for a country house, to which I had been fortunate to receive an invitation, not many hours distant from the capital. Light clouds in forenoon had not dissipated half my journey; and although they did not at a stretch with the same houses as an ordinary stage in Hungary, the room which I had engaged proved unusually airy, and dragged me wearily along muddy roads in a jolting rattle; while the coolness, whose linguistic requirements were confined to a knowledge of his native tongue, seemed carefully to choose the depest rout, and resolutely to object to any necessitation of pace, in spite of my constant repetition of almost the only Hungarian sentence I knew, that I would pay him well if he would go quicker. At last, when thoroughly drenched and tired, obdurate lights shining out of the many windows of an old castle that loomed indistinctly in the darkness, promised a speedy improvement in my circumstances; and, in fact, my recent misadventure in the carnival revels and luxurious life of the capital, was more than made up for me. My kind host had already chafed out a short tour through the Highlands of Hungary, to be performed in his own wagon; and on the following morning we were *en route* behind a better team and under a brighter sky than had fallen to my lot on the previous evening. Our road for the first three hours lay through a flat, well-cultivated country to the curious and eminently characteristic old town of Gyöngös, situated at the foot of the Matra range, and consisting of a long, broad, struggling street of low houses, with here and there the town mansion of a neighbouring proprietor; for, although Gyöngös contains only about 10,000 inhabitants, the vicinity of the vicinity revert to it as the centre of their winter pastimes, and during that season of festivity woe out the echoes of its quiet streets with the sounds of their revelries. Now its principal inn was in a state of repose, and the only interesting information we obtained was the significant fact that two Austrian *regiments* had been sent in their requisition to the Government, apparently afraid of remaining in their unpopular position in the event of a revolutionary movement. Gyöngös contains a purely Magyar population, and is noted for the ultra-national tendencies of its inhabitants. Pursuing over a more undulating country, and through one of the best tobacco districts in Hungary, we looked

with interest on the plain of Kopolin, celebrated as the scene of an important and bloody action during the war of 1849, and rattled towards evening into the picturesque old town of Erlau, our horses clattering along its streets as merrily as though they were just starting on a journey, instead of having accomplished one of sixty miles in eight hours, without turning a hair. Erlau is the seat of an archbishopric, and seemed to contain a population composed principally of ecclesiastics and students. There is a large cathedral which looks like an open house; a spacious college that resembles a manufactory, an archbishop's palace, situated pleasantly in gardens, and a principal street of handsome houses, which are the residences of the canons. It is quiet, dignified, and dull, but Magyar to the backbone. The archbishop is the *l'ère* uncle of Count Reichenberg; and I went into the cathedral during service on purpose to look at the canon, who was the most liberal, and who was now very diligently employed over his natus. The inside of the cathedral is plain and simple, and contains nothing of interest beyond the bones of one or two kings of Hungary, in glass cases.

The Austrian Government, with singular infidelity, has alienated the whole of the Hungarian Roman Catholic clergy, by the Concordat, which deprived the Hungarian Primate of nearly all his power, and divested the Church of its most important privileges. The policy which has been recently pursued towards the Protestants has been equally unfortunate; and, although it has ended in failure, the attempt to transfer the powers of the synod to the Government has had the effect of reconciling the opposing denominations, who now find a common bond of sympathy in their mutual misfortunes.

Immediately above the town rises an abrupt cliff, upon which are the ruins of an old castle, celebrated for the defence which was made against the Turks, in 1549, by Dobo, the Hungarian commander, whose tomb is in a grotto on the hill, and whose monument figure considerably defaced by time, lies side by side with an old Turkish gun, a trophy of the war in which he was so gallantly distinguished himself. In 1849 this gun was painted in the national colours; but they have since been replaced by the black and yellow of Austria. The 20th of August, or St. Stephen's Day, which had, owing to the judicious arrangement of General Benedek, passed off quietly at Pesth, was here signalled by a demonstration, which took the form of a procession to the tomb of Dobo, when one of the ladies of Erlau made a speech, in which she regretted that it was no longer possible for Hungarians to win such glory as that which had crowned the defender of the fort, and recalled to the minds of her auditors the deeds of daring of some of her own ancestors, when a corps of Amazons had been formed, and assisted materially in the gallant defence which had been made. Perhaps it was the remembrance of this episode which induced the fair creature to take so prominent a part in the proceedings of the day. An old roadway leads into the fort, which is now a mass of ruins, and embedded among them are the columns, still standing, of the chapel, and an enormous gun cut out of granite. The greater part of the materials of which the fort had been composed were employed by one of the Emperors, formerly Bishop of Erlau, in the construction of the cathedral, the college, and his own residence. The view from the highest point is extremely beautiful. Below, the little town, consisting chiefly of churches, and handsome buildings, lies snugly cased between low hills, one side alone rising above it precipitately; tall poplars with their church-towers in height, and pretty gardens and orchards clothe the hill-sides. In the background are the Matra, and other mountain ranges, while in a westerly direction the eye rests upon the vast Pannonia, or plains of Low Hungary, which stretch away without an elevation higher than an ant-hill to the banks of the Danube. It happened to be a market-day at Erlau; and in the morning the little market-place was filled with peasant women, in picturesque winter attire; for the day was cold, and they had covered their usually bare legs with red Wellington boots, and their white chemises with sheepskin jackets embroidered and trimmed with fur.

Our road thither had led us along the margin of the Highlands, with Low Hungary, extending like a sea, to our left. From Erlau we turned directly into the mountains, and we were amply compensated for the loss of our good road by the picturesque scenery through which we passed.

Before nightfall we reached the country house of a Magyar of the genuine type, buried among wild hills, which all belonged to him, and surrounded by a village which had been inhabited by the dependants of the family from time immemorial. There was a festive air about the place, which carried one back several centuries, and the homely hospitality of its owner, who despised the incursion of European capital, and lived in a secluded dignity of his own from year's end to year's end upon the ancestral acres, was such as might have characterized the chief of some Highland clan when tourists in Scotland were rarer than they are now.

As in old times in that country the piper was a necessary member of the household, so our evening meal was accompanied by the strains of a gipsy band, who played in the corridor the wild national airs of Hungary. They were the family musicians, and formed part of the establishment. At a later hour the influence of the music made itself felt upon the large party who found themselves assembled in the old hall. It was impossible to sit still under the inspiring tones of the *csárdás*, or national dance; and our host led the way to the lively measure with a step not unlike that of the Scotch reel. The infection soon spread, and although I had never seen the dance before, I was soon jiggling with the utmost ease, and now and then whirling round my partner in the most approved style. As we warmed to the work, the music increased in pace, until at last dancers and musicians were thoroughly exhausted; then the gentlemen sang every popular song which the Hungarian repertory contained; then we danced the *csárdás* again, and now until a late hour did we seek repose from our salutary exertions in distant bedrooms along giant corridors.

The whole of the part of Hungary in which I was now travelling is in the hands of a few old families, who own estates of enormous extent. Formerly the condition of the peasantry partook somewhat of the character of serfdom; now, however, they are as free as the nobles, but the old traditions still cling to them, and they look upon the *Grand Seigneur* as one of the most important personages

in the universe. It was reported that in many of the villages Austrian emissaries had been active, promising the peasants a division of all the landed property in the country, if they were prepared to side with the Government in the event of a revolutionary movement taking place. Whether this was or not, the nobles declared themselves confident that no such bribe would tempt the laboring classes to espouse the anti-national cause. Two days more journeying among the hills brought us back by crossroads to our mountain pastures, where the mountains were wild and uncultivated, where the hills were bare or cut into deep ravines by the mountain torrents, sometimes heavily timbered, or clothed with vines. Villages were few and far between, scarcely straggling places, each with its little church, and cottages dotted about without any apparent design. One day the roads were thronged with peasants in gala dress on their way to church, for it was a festive occasion, and they were in appropriate attire, the men with feathers in their hats or bunches of a light gray grass called "crystal's hair," with which this part of Hungary abounds, and which somewhat resembles the most delicate ostrich-feathers; the women with red headkerchiefs, embroidered jackets, grey-coloured skirts, and high boots.

The highlanders of Hungary differ from their brethren in the low country in their wilder nature and less civilized habits; but they all have the same strong sympathy for the Fatherland, and, except to the initiated, present no striking dissimilarity. Still I wished to see those celebrated Pannons which form one of the most striking features of Hungarian scenery, and a great part of which are inhabited by Magyars of the purest blood. The most thoroughly national part of Hungary is to be found on the Upper Theiss, and its principal towns are Debrecen and Segedin. It was in the latter town that I found myself not long after my return from my last expedition, and contemplated its broad impetuous, irregularly directed, spacious market-place, and scattered houses, with the more compact towns further north. The houses here are seen, as they were, levelled over the plain, are surrounded by gardens and trees, cover an immense area, and present more the appearance of a large and well-substantial encampment than a town; as though the nomadic habits of the original founders had still clung to them, and they were not quite decided when they fixed themselves on this particular spot of the prairie, to remain there always. The streets in winter are sloughs of despond; in summer the passenger is smothered with dust. To reach them he first enters a wood, then traverses a desert plain, then enters another wood, and then the door of his house. In other words the streets are enormously broad, with avenues of trees on each side. A railroad now connects Segedin with Pesth, and one branch continues to Temesvár. As the country is quite flat, and the velocity of the train is not great, the traveler has every facility for observing the scenery, which is altogether unique. This dead level stretching away to the horizon like the sea during a calm, has an imposing effect. There is a solemn grandeur about it which saves it from being monotonous; and although but few objects occur to relieve the prospect, it never becomes wearisome. Now and then large villages appear, covering, as usual, many square acres of ground, consisting of 18,000 or 20,000 individual houses, and villages; sometimes we traverse a waste of grass dotted with flocks and herds, pease, sheep, and cattle, roaming at will over the boundless pasture, which reminded me rather of the prairies of Western Louisiana and the Texas borders than of the steppes of Russia. They are not so undulating as the latter, while the grass is not so long and waving as on a prairie. Occasionally large flocks of swans may be observed stalking over the plain; but they are usually to be found further south, and are seldom visible from the railway. Wild-looking men, with all the habits and characteristics of a class devoted to a single occupation, and leading a life differing in many respects from that common to peasantry generally, feed their herds on these boundless pastures. Sometimes we exchange grazing land for cultivation, and look across seas of Indian corn without a break, except here and there a clump of green groves a village. Meantime the train draws its weary length along, stopping about ten minutes at every station, to let out two passengers and take in one. The guard and stokers get down on the platform and smoke, and a general squally perambulation every body until it is time to start again, when we rumble gently along, so carefully and deliberately that if by chance you missed a train at one station, and were favoured by a good road, you would have no difficulty, with a smart turn of horses, in overtaking it before it reached the next.

I arrived at Temesvár at about two o'clock in the morning, and drove through the deserted streets in a peeling rain, in a vain search for a lodging. At last, in a low tavern, I was offered a bed, which was the permanent property of an Austrian officer, who was away on leave, and not expected to return. I was just encasing myself comfortably between his sheets, and congratulating myself on my good fortune, when, like the unhappy Cox, I was ejected by the devoted Bed, who most hospitably arrived at 3 a.m., and expressed, naturally, some indignation at finding a stranger in possession of the couch upon which his deities had dwelt. I thus found time for some time past. I was thus compelled to humiliate myself to the dust, to the dark passages, chattering and humiliated, and was thankful at last to be accommodated with a shakedown on a table in the coffee-room, which I had scarcely occupied for a couple of hours when I was disturbed by a gentleman in quest of *caff au lait*, and wandered about the passages without a home anywhere until the market-place began to fill, and I found solace and amusement in watching the peasants come in from the country, with their baskets on their heads. There was a greater variety of costume than usual, for the population of Temesvár and its neighbourhood is composed of diverse nationalities. I left the country of the Magyars, and found myself now among Germans, Serbians, and Wallachs. The dress of the latter especially is of a novel and charming character, more brightly patterned ayons of a more varied and delicate material, which reached below the knees, leaving the leg bare, while a long fringe of tassels of the same stuff depended behind, of equal length. The town itself is much more commonplace than that of Magyar construction; it is contained within the walls of the fortress, and consists of a large market-place and regular streets, with substantially-built houses of two or three stories. The view from the ramparts extends

over a great extent of suburb and garden, with the plain stretching southward, and an undulating country in the direction of Arad, a town of some importance, about thirty miles distant to the north. Temesvár is the capital of the Vovodina, which composes a separate government from the rest of Hungary, and is the centre of an independent administration. From hence a line of railway is projected into Transylvania, which is destined ultimately to be prolonged to Bucharest, and thus bring the now distant capital of Wallachia into direct contact with western civilisation.

About two miles out of the town is a large suburb, called the Fabrik, which contains a considerable population, and is connected with the fortress by shady avenues, with walks leading into gardens, where the beauty and fashion of Temesvár assemble on Sundays and Thursdays to listen to the music of an Austrian band. As one of the strongest fortresses in this part of Hungary, and a place of great importance strategically, a large garrison is always maintained here, and the streets are peopled with soldiers and officers in uniform.

I left Temesvár at two o'clock in the morning, to prosecute my journey to the last point, in an eastern direction, which railways have yet reached in Europe, and at daybreak found we were jogging along—far so more rapid epithet can be applied to an Hungarian railway—through more flat country, with peaked hills within view, clothed with vineyards. At Weiskirchen, a town about five miles distant from the Danube, a small branch line has been constructed to the coal-mines of Oranovica, that contain coal of excellent quality, from which the steam-boats of the Austrian Lloyd's Company are chiefly supplied. A line of hills shoots out the Danube from view, until we burst suddenly upon its wide-rolling steeps, and perceive our terminus built under the shadow of a precipitous cliff. A single huge red building, with here a dome, but, and a little church with a tin spire, compose Batschka, a very worthy termination, in so far as cheerfulness of aspect is concerned, of one of the worst lines of railway in Europe. By this time our passengers have dwindled down to a minimum quantity, and about six unwashed nondescript individuals emerge from second and third class carriages, with a very small collection of baggage between them, and wander in a vague uncertain manner into the large building which contains a restaurant, a booking-office, and accommodation for all the officials connected with the railway, and for any unfortunate passengers who may find themselves compelled to take up their temporary abode in it. This seemed likely to be our fate, as the regular steamer to Belgrade had broken down, and we were dependent for the prosecution of our journey upon the chance arrival of a passing boat. A detention of eight hours in a locality so utterly devoid of resources, was a serious trial to the patience of some of my companions, who amused themselves by quarrelling with the Austrian employés. To add to our discomfort, when, towards evening, a steamer did make its appearance, it was accompanied by a tremendous thunder-storm, in the midst of which we scrambled on board, and collected—a moist stamping assemblage of discontented representatives of various nationalities and costumes, in the little saloon, where we were destined to pass the night in our damp clothes, lulled to sleep by the murmurs of a Serbian baby, and the moans of a Greek priest. My wanderings in Hungary had come to an end, and I had already exchanged the Magyar for the Schave.

NECROLOGY OF EMINENT PERSONS.

SIR D. MAXWELL, BART.

On Tuesday, the 13th instant, at Cardross, near Glasgow, N.B., aged 87, Sir David Maxwell, Bart., of Cardross. He was born June 16th, 1773, and succeeded to the title at his father's demise in 1825. Sir David was Vice-Lieutenant William Wallace Stewart of Kircubright, and Honorary Colonel of the Galloway Rifles. He married, in 1800, Georgina, daughter of Samuel Martin, Esq., of the island of Antigua, but, and a little church with a tin spire, compose Batschka, a very worthy termination, in so far as cheerfulness of aspect is concerned, of one of the worst lines of railway in Europe. By this time our passengers have dwindled down to a minimum quantity, and about six unwashed nondescript individuals emerge from second and third class carriages, with a very small collection of baggage between them, and wander in a vague uncertain manner into the large building which contains a restaurant, a booking-office, and accommodation for all the officials connected with the railway, and for any unfortunate passengers who may find themselves compelled to take up their temporary abode in it. This seemed likely to be our fate, as the regular steamer to Belgrade had broken down, and we were dependent for the prosecution of our journey upon the chance arrival of a passing boat. A detention of eight hours in a locality so utterly devoid of resources, was a serious trial to the patience of some of my companions, who amused themselves by quarrelling with the Austrian employés. To add to our discomfort, when, towards evening, a steamer did make its appearance, it was accompanied by a tremendous thunder-storm, in the midst of which we scrambled on board, and collected—a moist stamping assemblage of discontented representatives of various nationalities and costumes, in the little saloon, where we were destined to pass the night in our damp clothes, lulled to sleep by the murmurs of a Serbian baby, and the moans of a Greek priest. My wanderings in Hungary had come to an end, and I had already exchanged the Magyar for the Schave.

THE BISHOP OF WORCESTER.

On Tuesday, the 13th instant, at his seat, Hartley Castle, near Stourport, Worcestershire, in his 78th year, the Right Rev. Henry Peppys, D.D., Lord Bishop of Worcester. The deceased prelate was the third and youngest son of the late Sir William Peppys, Bart., by the eldest daughter of the Right Hon. William Dowdeswell, and brother of the late Earl of Cottesham, formerly Lord Chancellor of England. He was born in Wimpole-street in 1783. He was educated at Trinity College, Cambridge, where he took the degree of B.A. in 1801, and was subsequently Fellow of St. John's College, Cambridge, where he graduated M.A. in 1807, B.D. in 1814, and D.D. in 1840; was Prebendary of Wells from 1836 to 1840, and Rector of Moreton, Essex, from 1822 to 1840, and also Rector of Westhall, Hertfordshire, from 1827 to 1840. In the latter year he was consecrated Bishop of Suder and Mar, and translated to the See of Worcester in 1841, on the death of the Right Rev. Dr. R. J. Carr. He married in 1824 Maria, third daughter of the Right Hon. John Sullivan, and grand-daughter of the Earl of Buckinghamham, by whom he has left issue two sons, and two daughters. The late bishop was a supporter of liberal opinions in the House of Lords, and of anti-Trinitarian opinions in the Church, though he was popular with men of all parties and schools of thought. His lordship was the 101st incumbent of the See of Worcester (founded A.D. 679). Hartley Castle, which

has been the residence of the bishops of Worcester for several generations, is a handsome but heavy building of the reign of William III., somewhat in the style of Kensington Palace, consisting of a front and two wings, in one of which is the chapel. The old castle, which had been erected by Bishop Gualtup in the fourteenth century, was demolished at the time of the Rebellion.

HON. P. B. DE BLAQUIERE.

The Hon. Peter Boyle de Blaquiere, died at Toronto, Canada, on the 23rd of October, aged 70. He was the fourth son of Lieut.-Col. Sir John de Blaquiere, Bart., K.B., whose wife was married to the peerage of Ireland in 1801, as Lord de Blaquiere, by Elzevir, daughter of Robert Dobson, Esq., of Anne's Grove, co. Cork. He was born April 27th, 1781, and spent his early life as a midshipman under Capt. Bliqh., of the *Jeanty*, and was present at the battle of Camperdown. He subsequently settled on a grant of land in Canada, where he became a member of the Legislative Council of the Province, and was eventually elected Chancellor of the University of Toronto. He was twice married; and had issue seven sons and eight daughters. De Blaquiere came over to England at the Revocation of the Edict of Nantes.

HON. C. BUTLER WANDESFORDE.

On Wednesday, the 7th instant, at Mount Jolly, co. Kilkenny, aged 80, the Hon. Charles Harward Butler-Canthwell-Wandesforde. The deceased was the youngest and last surviving son of John, 17th Earl of Ormonde, and brother of the late Marquis of Ormonde, so created in 1821. His mother was the Lady Anne Wandesforde, daughter and sole heiress of Sir John Wandesforde, who died in 1784. By his first wife, Lady Sarah Butler, he had family of two daughters and three sons, of whom the eldest, John, succeeded to the family estates.

CAPTAIN GIBBONS.

On Sunday, October 21st, at Witneyville, Oxfordshire, aged 85, William Gibbons, Esq., Captain R.N., on the retired list. He was the second son of Sir William Gibbons, LL.D., by Rebecca, daughter of Vice-Admiral Watson, and sister of the 1st Sir Charles Watson, Bart., of Wratting Park, co. Cambridge, and grand-niece of the present Sir John Gibbons, Bart., of Stapenwell Place, Middlesex. He was born in 1775. He entered the Navy, in 1789, and commanded the *Queen, Drake, and Joseph*, cutters, in the latter of which he took, September 18th, 1803, *Le Bonaparte*, privateer, of 6 guns, and 52 men. His last employment was, from 1808 to 1811, as commander of the *Alpha* schooner, in the English Channel. He became a retired commander on the junior list in 1831, and on the senior list in 1857.

PRINCE RAFFIHA.

On Monday, November 5th, at Paris, the Prince Raffiha, of Dorevry, in Poland. He married Mary, daughter and co-heir of the late Peter Patton Bold, Esq., of Bold, co. Lancaster,—a family which formerly held large estates in that county.

WILLS AND BEQUESTS.

Mary Lady Von Stiermann, of Norrköping, Sweden, of an English origin, but for many years residing in Sweden, where she died on the 15th of July last, in her 70th year, made her will in 1851, and a codicil to the same in 1852, which have been recently proved in London, by David Morrie Johnston, Esq., of Moor-gate-street, the sole executor for England. The personal property is worth about £5,000. The executors nominated for Sweden are *Baron de H. von Stiermann*, the Hon. Frederic William Von Stiermann, a member of the Swedish House of Lords, and John Moselius, Esq., late British Vice-Consul in Sweden. This lady was thrice married: first, to Colonel Augustus Hamilton, of Marlinton, in Lanarkshire, who fell gloriously at the head of the Scots Greys at Waterloo; secondly, to Captain Edward Payne, of the same regiment, and also present at Waterloo, who died in 1811; and, thirdly, to her surviving husband. Her ladyship, besides an annuity of £150 charged on the Calcutta estate of Marlinton, received for the long term of forty-five years from the British Government, the recognition of Colonel Hamilton's meritorious services, an extra pension of £330, partly from the Waterloo Fund, and partly from the Royal Bounty, and was probably amongst the last recipients of such proof of national gratitude. Her services rendered at and antecedent to Waterloo. It is very much to be regretted that Colonel Hamilton's body, although assiduously sought for on the battle field, was never found. Her ladyship's will is but of moderate length. She bequeaths to her husband property equivalent to £1,400. She then makes specific bequests to two sons, and to a nephew of the late Captain Payne. The residue of her estate she bequeaths to her executor, D. M. Johnston, Esq., but subject as to £1,000 Consols, part thereof, to the contingency of his surviving her husband. She has given directions that her remains, at present entombed in Sweden, shall be disinterred and conveyed to England, and deposited by the side of her second husband, Captain Payne, in the burial ground of Chichester, Sussex.

Henry James Wheeler, Esq., of Doctor's Commons and 27, Hyde Park Gardens, died at his residence on the 16th of October last, leaving property to the amount of £18,000. His will bears date the 25th August, 1849, and a codicil in the same year, and there are two other codicils, dated respectively in 1851 and 1852. The surviving executors appointed by the will are his relict and Llewellyn Wynne, Esq., Solicitor, 56, Lincoln's Inn Fields, to whom probate was granted on the 20th instant by the London Court. The will is of considerable length, and contains a great number of bequests, with annotations. To his relict, who possesses very considerable property under marriage settlement, he bequeaths an immediate legacy of £2,000, together with an annuity of £400, also the furniture, carriages, and other effects. After the payment of all legacies and other necessary expenses, the testator leaves the residue of his estate to be divided equally among his children. To his sisters, his partner, one of his clerks, and to the trustees under the settlement, and to others he has left legacies; and there are also be-

young Princess, and with whom the Duchess corresponded up to the close of her life, in May, 1859, has just published that correspondence * in an unusual but very agreeable form. Following the example of Carlyle in his history of Cromwell, he has connected these letters by biographical details, which give us a complete autobiography of this clever and excellent princess. Politics are excluded from the work, which makes it more acceptable, as we meet with no interruption in the narrative of a life which interests as much by the important events witnessed by the Duchess of Orleans, as by the reflections and observations emanating from her highly intellectual and accomplished mind. Some anecdotes of the revolution of 1848, and of the exile of the Orleans family in England, are here published for the first time.

The lithons of Suet and Egypt have been, and are likely to be again, at no very distant period, the object of discussion between England and France, and the difference of opinion may, perhaps, be successfully served to invigorate the peace of Europe. Every information on that country, therefore, is valuable, and M. Letronne's "Miscellaneous" † bear the weight of science and sagacity combined. M. Letronne, one of the first Hellenists of Europe, had made Egypt the principal subject of his studies, and was publishing very important works on that country when death suddenly cut short his career.

His historical sketch of the lithons of Suet describes, after having stated its physical condition, the various efforts made by the ancients to join the Mediterranean with the Red Sea. Among other remains contained in this work there is a notice on the civilization of Egypt, from the first residence of the Greeks in that country, to the conquest of Alexander. The credulity displayed in this collection has a practical object throughout, and it is written by a man who is eruditely desirous of making knowledge applicable to the social improvement and welfare of mankind.

The history of the Reformation is rarely retrospective for more than half a century before Luther, and few are aware that it actually commenced in the twelfth century. Peter de Bruys, the Luther of the middle ages, and like him also a priest, a heretic, a schismatic, and Arnold of Brescia, are men whose labours and extraordinary lives as Christian reformers, are well worth the careful biography which M. Napoléon Peyron has just published. ‡ His work embraces the greater part of the twelfth century, and closes at the death of St. Bernard and Abelard. The description of the political and social condition of the time intervenes in the narrative, making a very interesting book, of which the title alone is not, perhaps, likely to attract many readers.

In literature the eras of Pericles, of Augustus, of Leo X., and of Louis XIV., stand forward as beacons, whose light serves as a guide to ancient and modern times. It was by no means an easy task to make precision and brevity with elegance and force of language. A lady, however, has made the attempt with success, and her book, † intended only as a rapid survey of four great periods of learning, is become, under her pen, a standard library work.

NEW MUSICAL PUBLICATIONS.

Boosey's Musical Cabinet is a miracle of cheapness. Of late we have seen a good deal done in this way, but nothing at all comparable to the publication before us. It is a series of shilling books or numbers, in large quarto, each number containing from forty to fifty pages, and each containing as much matter as the ordinary folio page of music. It is beautifully printed on the finest paper, and the text (as we find from a pretty careful examination), is of immaculate correctness. Its contents are of the highest order, and, if continued as it has begun, it will become a library of classical music. In order to estimate its cheapness, let us take the first book, or number, which contains twenty songs by Mendelssohn, with pianoforte accompaniments. Among them we find many of his richest vocal pieces, such as "There be none of Beauty's daughters," "The Winter Song," "By the Silver Arbores," "The First Violon," and others equally beautiful;—and we have them for less expense than they would cost shillings, as published and sold in the ordinary way. Another number contains fifteen songs of Beethoven, including "Adeleide," and the "Quail;" in another we have fourteen songs by Verdi; in another, twelve English duets, by Mendelssohn and other composers; and in another, twenty ballads by popular authors, including some of the best compositions of Edward Lear, Frank Mori, and other favourites of the public. The instrumental series is equally remarkable both for cheapness and quality.

It is impossible to look through the elegant books before us without wondering how they can be given to the public on such terms. We may suppose that, as they consist, generally speaking, of favourite pieces, for which there is a sure demand, the publishers look for remuneration to a very larger circulation, and may sell them much cheaper than unknown music, the success of which is uncertain. This supposition may account for a great deal of the cheap music of the present day, such as Novello's and Cocker's editions of Handel's most favourite compositions, which find purchasers everywhere, and among almost all classes of people. But it seems insufficient to account for such a case as the present, where the price is reduced to less than one-twentieth part of the ordinary amount. There only remain two alternatives,—either the publishers are doing music at a positive loss to themselves, or the general price of music is exorbitant. The first alternative is put out of the question by the known sagacity of the eminent and flourishing firm who are doing this business, and we are reduced to the other explanation, which is doubtless the true one. Works of magnitude, the publication of which involves a considerable expenditure of capital, are probably not sold too dear; but the extravagant prices demanded for the vast quantities of single vocal and instrumental pieces which issue daily from the music-shops, are an injury to the public and the art itself, a nuisance which will be abated only by the multiplication of such cheap publications as the present.

Boosey's edition of the "Sonatas of Beethoven for the Pianoforte" § is not another specimen of cheap printing, but it is an exemplification of a case in which cheap printing, in the present state of music in this country, is eruditely impracticable. It contains, in two handsome folio volumes, the whole of Beethoven's

seven sonatas for the pianoforte, without accompaniments, edited by an able and eminent professor of music, printed with great beauty and remarkable accuracy, and enriched with a prefatory sketch of the life of Beethoven, from the pen of Mr. G. A. Macfarren, a gentleman, who is not only one of the greatest English musicians of the present time, but distinguished for his literary works conjoined with his art. It is embellished, moreover, with a fine portrait of the composer, engraved after a picture of recognized authority. The price of the work is a guinea; and, considering its magnitude, the manner in which it is got up, the large cost of its production, and the necessarily limited extent of its circulation, its price is plainly as low as it could possibly be. For the pianoforte, works of Beethoven, though valuable to the artist and the educated amateur, are, as yet, a sealed book to the thousands in this country, who, really loving music in its simpler and more popular forms, are those who create an "effectual demand" for cheap publications.

The pianoforte sonatas of Beethoven, however, are daily becoming more and more known in our musical society. If we look back only twenty years, the change in this respect is striking. It is now the custom among our most distinguished masters of the instrument, to cultivate the taste as well as the fingers of their pupils—to lay before them what is great and good, and teach them to understand and love it. This progress is aided by the improved quality of our public musical performances, even those frequented by popular audiences. It is no uncommon thing now, in our drawing-rooms, to hear one of Beethoven's sonatas played by a lady with taste and execution, and listened to by a fashionable company with intelligent delight.

There are none of the works of this illustrious maestro—not even his gigantic symphonies—in which his genius shines with greater lustre than in his sonatas and other compositions for the pianoforte. It was evidently the instrument which, from prohibition, he employed in giving expression to his most beautiful, his grandest, his wildest, his most fantastic ideas. In his hands the variety of its powers is unlimited. He can make it, by turns, produce the thunders of the fall orchestra, the gentlest breathings of the flute, or the pæliatic tones and accents of the human voice. There are many great composers for the pianoforte, but no one can gain an entire mastery over the instrument, no one can fully comprehend the extent of its powers and resources, without being thoroughly conversant with the works of Beethoven.

NEVER ALONE.

ALONE? alone? I'm never alone!

Ten thousand spirits walk with me,
Over the street and its flinty stones,
Over the sands of the rolling sea,
Through the quiet woodland battle with birds,
And the purple mist where the plover cries;
Through meadows speck'd with flocks and herds,
By lakes that mirror the evening skies.
High on the mountain's icy crest,
And down, down 'mid the dust below,
Companions come at my soul's behest,
And hover about me where'er I go.

'Tis only in the midst of men,
Their hatreds, meannesses, and spies,
Their sneering scorn, their jostle forth,
Their base, unmanly derisions,
That I feel the weight of Solitude,
And pine for the muscadine leaf and wild,
For the freshening laurus of the pashies wood,
Or the prattle of a little child;—
I long to fly to the ends of the Earth,
Into communion of mine own,
Anywhere out of their dreary mirth,—
Alone—alone—but never alone!

GARIBALDI.

THE wisest ways are wisest still,
The simple are the simple ever;
Too much of strife, too much of will,
Too much of self, too much of e'er;
The soldier mind doth dwell ill,
The master-spirit never.

The steadfast land sometimes may fail,
The right, strong heart may falter;
The firmest foot on highest rail
Awhile its course may alter.
Yet still press on where onwards quail,
Straight up to Freedom's altar.

So, Garibaldi! march thy way,
Deceived, but ne'er deceiving;
Consent that seem to go astray
But sanction our believing;
For Victory no such glorious day
As a glorious retrieving.

ELEANORA L. HERVEY.

IDEAL TALK.—Faint, the painter, had a great dislike to idle talk and unmeaning conversation. After sitting silent in his own room, during the "holy and disquieted chat" of some idle callers-in, who were getting about the weary, he mildly exclaimed, "We had just got to dinner to-day!" "Dear! Mr. Faint, what an odd remark!" "Why, it is as good as anything you have been saying for the last hour."

THE IMPROVED PATENT HARMONIUMS.

MANUFACTURED BY ALEXANDRE & SON, OF PARIS.

CHIEF WHOLESALE AGENTS: METZLER & CO.,

37, 38, & 35, GREAT MARLBOROUGH STREET, LONDON,—W.

ALEXANDRE'S HARMONIUMS are universally admitted to excel all others in durability, and in the power and quality of their tone; and as they rarely require tuning, and give no trouble in their management, they are coming daily into more general use.

The following is a complete List of all the Instruments manufactured by them, forming a large Assortment, suitable for either the Church, School, or Drawing-Room.

PRICES.

| 26.—In Oak Case, with Twelve Stops (Four complete Rows of Vibrators), rich full tone, Twelve Stops (Four complete Rows of Vibrators) | ... | ... | 36 |

WITH THE PATENT PERCUSSION, OR PIANOFORTE HAMMER ACTION.

The invention of the PATENT PERCUSSION ACTION has entirely removed the sole objection to these admired instruments—want of rapidity of articulation when used for Pianoforte Music. It consists of a set of Hammers which strike the Vibrators at the same moment that the air is admitted, thus facilitating the execution of the most brilliant and rapid passages, and also producing a fuller and very superior quality of tone, and imparting to this instrument all the advantages of the Pianoforte.

| | | | |
|---|-----|-----|-------------|
| No. 14.—In Mahogany Case, Three Stops, One Row of Vibrators | ... | ... | 30 Guineas. |
| 15.—In Mahogany Case, Five Stops, Two Rows of Vibrators | ... | ... | 36 |
| 16.—In Mahogany Case, Nine Stops, Two Rows of Vibrators | ... | ... | 42 |

WOTHERSPON & CO., Glasgow and London.

39, GREAT RUSSELL STREET, BLOOMSBURY, LONDON.

(Three doors West of the British Museum.)

A & F. PEAR'S GENUINE TRANSPARENT

SOAP undergoes a process in its manufacture which rarely removes all the potash alkali (no injurious), and introduces an ingredient of a soothing nature, which renders it the most beneficial and pleasant soap for the face, by age only. Its perfume has been studied so as to make it most agreeable. This fact, with the peculiar properties of the soap and the care bestowed on its manufacture, has induced many Physicians to recommend it in Skin Diseases.

Another evidence of this Soap, is that it may be used with either hard or soft water, a quality which renders it extremely agreeable to gentlemen of the Navy and Army, or families travelling in other countries, change of climate render it the most beneficial in its properties.

Bought in Square Cakes, price 1s. and 1s. 6d. each; and in Tablets.

To be had of most respectable Perfumers and Chemists in London and Country, or of the Inventors, A & F. PEAR, 39, Great Russell-street, Bloomsbury.

IMPORTANT TO PROPRIETORS OF STEAM BOILERS.

PASTON'S PATENT BOILER FUEL

is a new and improved method of burning fuel in steam boilers, without injury to the metal, and with great saving of fuel, and less liability to accident from explosion.

Testimonials from the most eminent engineers, boiler makers, millwrights, and manufacturers, with full particulars, will be forwarded on application to P. & S. EASTON & SPRINGFIELD, Sole Manufacturers and Patented, 37, 38, and 39, Wapping Wall, London, E.

K EATING'S COUGH LOZENGES.

Statistics show that 50,000 persons annually fall victims to pulmonary diseases, including consumption, disease of the chest, and other respiratory organs. Prevention is all that matters here; be therefore prepared, during the wet and winter season, with a supply of K EATING'S COUGH LOZENGES, which possess the virtue of sweetening, as well as of curing the throat, and preventing the disease from spreading to the lungs. Prepared and sold in boxes, 1s. 11d.; 2s. 6d.; 3s. 6d.; and 4s. 6d. each, by THOMAS KEATING, Chemist, 40, St. Paul's Church-yard, London, E.

COUGHES, COLDS, CONSUMPTION,

ASTHMA, BRONCHITIS, SPERRAGIA, RHINITE, NATURAL REMEDY, PREPARED BY DR. J. COLLIS BROWNE'S CHLORODYNE. In consequence of the extraordinary efficacy of this medicine, it has been ordered to be used by the British Navy, and is now being used by the British Army.

It has been ordered to be used by the British Navy, and is now being used by the British Army. It has been ordered to be used by the British Navy, and is now being used by the British Army.

Sole Manufacturer, J. T. DAVENPORT, 30, Great Russell-street, Bloomsbury, London.

Price to bottles, 2s. 6d. and 6s. 6d., carriage free.

DINNIFER'S PURE FLUID MAGNESIA

XIV.—Criminal Law.

XV.—Under the Cliffs.

OFICE OF "TEMPLE BAR," 122, Fleet-street, London.

THE LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 22.]

SATURDAY, DECEMBER 1, 1860.

[PRICE 3d.]

REFORM AND REFORMATION IN FRANCE.

TWO singular "feelers" were last week put forth in the French Press by the French Government: the one suggestive of a Political Reform, and the other of a Religious Reformation in France. As is customary under the imperial régime, these announcements were cautiously and non-officially made, with the view of testing public opinion, and preparing the way for future action. In the first case, action followed upon discussion with unexampled rapidity. In the second, the "feeler" still remains a vague speculation, not to be traced to official authority, though doubtless emanating from it, and to be avowed or disavowed hereafter as circumstances may warrant.

In considering, in the first place, the Political Reform, which the Emperor, *ex proprio motu*, and as "a marked proof of his confidence," has designed to bestow upon the French people—the substance of which appeared in the official columns of the *Moniteur* on Sunday last, in the shape of an imperial decree—we must state our conviction, that it is certainly as large an instalment of popular liberty as can reasonably be expected from a sovereign in the peculiar and exceptional position of the Emperor. The first care of the founder or the restorer of a dynasty, must always be the preservation of the dynasty; and if the revolution, of which he is the chief, have been violent or lawless, effected by military, not by legislative action, the strong hand and the powerful will must of necessity be employed to silence and subdue opposition, and to support and consolidate the new system.

With two pretenders to the throne, and a Red Republican party not utterly annihilated, it would have been imprudent in the Emperor, however liberal might have been the bias of his mind, to allow much liberty of discussion, either to the Press or to the Parliament; until he had widened the foundations of his power and popularity, by sufficient proof that he was as able to retain a throne by his wisdom as to win it by his audacity. The English people, looking upon the Emperor too exclusively from an English point of view, have lost sight of the fact that a Frenchman's ideas of liberty are not exactly those which we entertain in this country, and that the daring, and hitherto brilliantly successful, policy of Napoleon III. has given the French nation several things which, for the moment, it values much more highly than the stormy constitutionalism which it suffered, rather than enjoyed, during the Restoration, and in the days of the Citizen King. These things are—material prosperity—military renown—and the first place in European politics. Never at any period did France stand so high in power, influence, and prestige, notwithstanding some errors and mistakes on the part of the Emperor, as she does at the present moment. That prestige is so constantly on the increase, that it is impossible for the most obstinate adherent of Henry V. or the Count of Paris, to deny a fact so palpable, or to attribute it to any other cause than the genius, the courage, and the fortune of the one man whose will has shaped the whole policy of the empire during ten years of unexampled difficulty. At an early period after his assumption of power, the Emperor explicitly stated that his policy would not always be one of repression, but that the day would come when he would be able, without endangering the stability of the edifice which he had raised, to enlarge its bases and admit within its precincts the intellect and the statesmanship of the nation. By his decree of the 25th

November he seems to consider that the promised day has arrived. In affording to the great bodies of the state a more direct participation in the policy of the government; in decreeing that the Senate and the Corps Législatif shall annually vote an address in reply to the speech at the opening of the Chambers, which address is to be discussed in the presence of the Government Commissioners, who, on their parts, will be called on for the necessary explanations on the interior and exterior policy of the Empire; and in taking measures to facilitate to the Corps Législatif the expression of its opinion, and the publicity of its debates—the Emperor has certainly made a liberal and important concession to public opinion. It is easy for professional critics to look "the gift horse in the mouth," and to find fault with its size, or its colour, but sensible men in France, and almost every one in England, will admit that the gift is a good gift, and would have been good though it had been smaller. Even if looked upon as the partial payment of a liability, and not as a gift, it is, under all the circumstances, a very considerable instalment of the debt, enough to encourage, if not wholly to satisfy, any reasonable creditor. Certainly it will be the fault of the French people themselves if they do not turn it to account for the growth and consolidation of their political liberties, and for the removal from their country of the stigma that must attach to any intellectual and high-spirited nation that allows itself to be wholly governed by a military autocracy.

But of still greater significance and importance than this measure of Political Reform is that of the Religious Reformation, which has lately been discussed in the Parisian press, under the title of "Napoleon III.—Pope." The time, perhaps, is not quite ripe for the consummation; but any statesman and publicist, who has carefully watched and studied the Emperor's career, and endeavoured to dive into the secrets of that dark but magnetic mind,—as events great or small have thrown a light into its profundities,—will be quite prepared to believe that Napoleon III. is exactly the man to enact in France the part which Henry VIII. enacted in England. As a temporal Sovereign, the Pope is as much a nuisance to France as he is to Italy; and it seems to follow as a necessary consequence of his approaching deposition by the Italians, that he shall cease to hold in France a power that may be, and very often is, at variance with the rights of the Chief of the State. As alleged by the writer, who has in all probability been put forward by the French Government to initiate this question, the Queen of Great Britain, the King of Prussia, the Emperor of Russia, and the Sultan, are severally the heads of the Church in their respective states, and allow no foreign priest or potentate to meddle in their internal affairs; and why, it is asked, should not the head of the French nation enjoy the same immunity? The yoke of the Papacy has been galling to French statesmen and to French Sovereigns ever since the days of Henry IV. The subject has often been discussed, and as often postponed. And if it have slumbered at any time, it has never died. But within the last two hundred years there has not been a French Sovereign sufficiently firm upon his throne, and of sufficient power of will to dare and do in a matter of such mighty import. Had such a man arisen, there would, ere the present day, have been an end of a system which is alike inconsistent with the liberty of nations and the independence of sovereigns. In the attempt to put an end to the spiritual imperialism in the secular *empire*, Napoleon III. will not only be supported by the cordial good wishes of all educated and intelligent Frenchmen, as well

as of the Protestant people of our own Isles, but of the friends of civil and religious liberty in Roman Catholic Italy, Germany, and even in Austria. In the last named country nothing so damaged the fortunes and tarnished the popularity of the Emperor as his unhappy "Concordat." Napoleon III. seems to be predestined for the work. Let him but carry it to a successful completion, and no name in the great page of European history will occupy a more important or more honourable position than his own.

HOW THE BRITISH LEGION HELPED GARIBALDI.

To the Editor of "The London Review."

SIR,—The communications which are just now constantly appearing in the daily papers with reference to the conduct of the British Legion at Naples, and the mal-appropriation of the Garibaldian fund, are only confirmatory of facts which I have learned from other sources. As I never regarded the formation of the Legion with a favourable eye, I may perhaps be permitted to call public attention to the inconvenience which must ever arise from the rash intrusion of our sympathies, whether as represented by money, or as embodied in arms, in the internal affairs of foreign countries. If the history of the British-Italian Legion does not "adorn the tale" of Garibaldi's brilliant campaign, it may at any rate "point a moral" which I do not desire should be lost upon my countrymen. The year upon which we are about to enter will in all probability be rife with movements which must enlist the warmest sympathies of Englishmen. Not only in Italy but in Hungary will men rise in the sacred cause of national independence; and it is precisely because that cause is dear to all Englishmen who have at heart the credit and good name of the English nation, that I, for one, must deprecate a course of proceeding which must be alike injurious to both.

One has only to consider the character and antecedents of those who are likely to join in enterprises of this description to perceive that they must always be attended with unsatisfactory results. With very few exceptions, the men who compose the British-Italian Legion are either totally unused to warfare, and have never performed a campaign in their lives, or they are soldiers of fortune, whose military experiences may have been varied and stirring, but are by no means creditable. It is in vain to look in that body for men who know what campaigning is, and who have served elsewhere with honour and distinction. One or two such there may be, but they are swamped in the mass of tyros and adventurers.

A campaign in an enemy's country is attended with hardships such as those who have never tried it are utterly unable to realize beforehand. To sustain a man under them requires a stronger stimulus than mere sympathy, however well placed that sympathy may be. It may safely be said, that there are only two motives which will serve the purpose. These are patriotism or necessity. A man who is fighting for his own liberty and his own country ought to, and we believe every Englishman would, endure everything. A man whose profession is arms, and who is doing "a fair day's work for a fair day's wage," takes his hardships as a matter of course. But the amateur, whose only impulse is a generous sentiment in behalf of a stranger, and whose only hope is, that he may return to his own country with a whole skin, and a certain modicum of glory, finds that three successive nights in the rain on outpost duty cool his ardour. Those who marched with the buoyancy of hope through the streets of some of our English towns in all the bravery of red shirts some months since, found very shortly after their arrival in Naples that the reverse of the medal was very different from that attractive device which had tempted them in England. They complained, and with reason, that the Garibaldini, by whom they had hoped to have been received with open arms, looked upon them with coldness and jealousy. These latter feared, not unreasonably, that the deeds of valour which had marked their progress from Palermo to Naples might be rivalled, if not eclipsed, by the prowess of our countrymen, who, coming in after the burden and heat of the day was over, were burning to distinguish themselves. Some were even ungrateful enough to ask what business it was of ours, and whether the matter of Italy depended upon the exertions of 600 Englishmen? This prejudice excited a corresponding soreness on the part of the brigade, who attributed every inconvenience to which they were subjected to an intentional neglect. I will not do those superior officers of the Garibaldian army, with whom the arrangements for their comfort rested, the injustice to believe that this was so; but there can be no doubt that no adequate measures were taken to provide either for their commissariat or transport.

Italians, fighting for their freedom and their fatherland, may be contented with very short commons; Englishmen, fighting for Italy, will scarcely be satisfied with rations still more limited. Even if they were not so, the habits and requirements of the two peoples are so very different, that the one would consider a luxury the other would deem a privation. Under such pressure a volunteer soon begins to doubt whether, after all, the individuals for whom he is under-

going so much are worth the sacrifice; and when he discovers that while 600 Englishmen went out to fight for Naples, that city, containing a population of half a million, contributed only eighty men to the Garibaldian army, the cause in which he is enlisted begins to assume a different complexion. Thus, pondering as he trudges to the front, without shoes and with an empty stomach, he determines to supply by force the negligences of the Quarter Master General's department. The soldier of sentiment unused to discipline, is encouraged by the soldier of fortune, accustomed to defy it; the example spreads, and the whole brigade begins to plunder right and left. Harsh measures are resorted to in consequence by the superior officers, and a spirit of mutiny and desertion speedily manifests itself. While fighting is actually going on, the British Legion are ordered to the rear; out of 600 men only 200 appear to the muster-roll, and Garibaldi expresses the hope that the British Legion may not again be named in his hearing.

Nor as might be imagined, are the 200 who remain the best men. They are chiefly the adventurers, whose original object in enlisting in the expedition was to make it pay, and who are loath now to throw away their chance of incorporation with the Sardinian army. The ardent and misguided enthusiasts, who were honest sympathisers, finding themselves subject to hardship which they never counted upon, associated with a large portion of the scum of the British army, and sent to the rear in the moment of danger, prefer desertion to the disgrace of their position, and throw themselves penniless upon the streets of Naples. Then follow rows *en masse*, charges of theft, of tempting men to desert, of being drunk and disorderly, and as they have forfeited all claim to British protection, they find themselves at the mercy of a *consiglio di guerra*, composed entirely of Italians prejudiced against them, and from whose sentence there is no appeal. It is no use protesting against being treated like an Italian soldier; when an English gentleman puts himself into the position of one he must take the nations and the justice which are meted to the latter. There is no use asking for a regimental court-martial or a judge advocate, or sending imploring letters to the British Consul, or appealing to the British excursionist who happens to be at Naples. They will answer him that he should have thought of all this before, and that as he has made his bed, so he must lie on it. Even if his character has been irreproachable, he finds himself subjected to a social ostracism by his countrymen, who have learnt to entertain a wholesome dread of being seen in company with a member of the British Legion.

But not merely has this unfortunate body been the means of discrediting the name of an Englishman in Naples. It has proved a source of distinct annoyance and pecuniary loss to the cause it was designed to serve. Those liberal gentlemen who subscribed money, which was sent to Berlioz, and which—even admitting that this Mazzinian applied it as was intended—was a mere drop in the bucket, may have the satisfaction of knowing that Garibaldi was called upon to disburse about £18,000 in behalf of those Volunteers whose name was so distasteful to his ears. First we have one enthusiast handing over the contract for clothing the Legion, at a commission of 5 per cent., to a contractor with sympathies. This individual passes the good thing on to a friend, receiving 10 per cent. The latter hands it over, having levelled the same black mail, to our respected acquaintance the Jew, who does his little bit with Garibaldi after dinner, "for clothes supplied," burdened with 35 per cent. commission. Then we have steamers taken up for 700 men, at £10 a head, only carrying out 400, but getting paid the whole amount of the freight, besides numerous minor transactions which we would rather not specify, but which have caused Garibaldi to regard the British Legion as somewhat an expensive luxury.

I regret that I, or any one else, should have to speak in such terms of an enterprise which was doubtless undertaken from the best of motives, and which had its origin in a generous sentiment which all must share. We only deprecate the lamentable rashness and ignorance of military matters, which betrayed honest men into so foolish an undertaking. Soldiers are not made in a day, nor does a campaign consist entirely of pleasurable excitement. If men wish to be volunteers, let them join that national movement at home which furnishes to every neophyte the noblest and purest stimulus to endure hardship, and submit to discipline when the day of trial comes.

It is sad to think that there is not a Garibaldian who does not regret that the British Legion ever came to Naples—scarcely a member of that Legion who does not wish himself heartily out of it. The whole thing has been a *fiasco*. It is the business of the British people to profit by the lesson which it has taught them.

ONE WHO HAS JUST RETURNED FROM ITALY.

A SCOTCH FOREIGNER!—A Galloway fiddler, whose services had been engaged for a festival occasion, not many years since, persisted in the most malicious efforts to draw from his instrument the religious strains of a great Scottish martyr. At last one of the company ventured to ask him whether he could not possibly oblige the company with something native—"Maggie Lauder," for example, or "Bonny Wee?" The minstrel shook his head, dubiously—"Nae, sir, I'm sair in the Rellies saug."

THE GOUTY PHILOSOPHER.—No. XXI.

MR. WAGSTAFF'S DISCOURSE ON THE INADVANTAGES OF THE "BLUE SKY,"
AND ON THE ADVANTAGES OF FOG AND MIST.

It is the characteristic of a true Englishman to grumble at the climate, I am not a true Englishman. Fog, and mist, and rain, I love them every one, and maintain that, severally and collectively, they do good, not harm; and that, all things considered, the climate of England is the best and healthiest in the world. Its abundant moisture, of which we ignorantly complain, is, next to our religion and our liberty, the greatest blessing we enjoy. What makes our meadows greener—our men stronger, sturdier, and stender—our women lovelier, than any other, if it be not our moist atmosphere wrapping us in a blanket? In addition to these things, the warm rains which we owe to the great gulf stream from Mexico, that flows lovingly into all our western creeks and harbours, anoints our western hills with verdure and fertility, tempers the wrath of winter, mellifies the iron features of the frost, and gives us better food for the nourishment of our population than can be procured anywhere out of the limits of the British isles. How can good beef or mutton be raised without grass? How can there be perpetual grass without perpetual rain? And is there anything like grass to be seen, except for a brief spring season, and a part of the summer, on the continents of Europe or America? In England and over all our happy isles, the grass is green and succulent under the midwinter snow, and is not only the charm and the beauty of all the seasons, but as faithful to December as to June.

Frenchmen and other foreigners who have never been amongst us as refugees or visitors, have a tradition that the sun is never seen in England—except dimly through a mist; that a Londoner never has a chance of beholding the blue sky until he looks at it from the jetty at Boulogne, or from the middle of the Place de la Concorde—a tradition about as venerable and as well-founded as that which was once current in England, that every Frenchman dined twice a week upon frogs, wore wooden shoes, was polite to the ladies, and was a half-blooded between a monkey and a tiger. Frenchmen still have a vague idea that the month of November (so ignorantly maligned by human parasites, who talk by rote for want of wit, like with such a leaden weight of mist and cloud upon our brains, as to make life intolerable, and cause us to jump off monuments and bridges; to the ourselves up to trees or helopets; to swallow strychnine and arsenic; to send bullets through our brains, and sharp razor-blades through our carotid arteries.

If people in whose ill-furnished noddles these ideas find a lodging without paying any rent for it, would but visit me at Withy Grange any day in any November in any year, I would undertake to show them glories of foliage, of landscape, and of sky, which would prevent them from ever again repeating such abominations either about the month of November, or about the English climate generally.

"*London est laqueus
Metropole du spleen!*"

Such is the description, by a French poet, of the healthiest, as it is the greatest, city in the world; the bad character of which his countrymen persist in extending to the whole island. I grant that a London fog is not pleasant, and that a Manchester or a Glasgow fog is worse; but the unpleasantness is not the fault of the innocent fog, but of the coal smoke that comes from the fire-sides or the cotton-mills of our comfortable and industrious people. For this reason, Paris, that lorna weed, is and is never warm except in the dog-days, has a more agreeable fog than London whenever it is favoured with such a blessing. And if Paris have not the disagreeable fog, neither has it the agreeable indoor comfort, nor the ceaseless manufacturing industry of its dingier cousins. So that, after all, the "balances of heaven are just," in fog, as in everything else. But I do not wish to institute any comparisons between the two cities. My theme is not the climate of London, but that of the British Isles. Paris is all very well, so is Vienna, so is Rome, so is Naples, so are a thousand other places; but London, with all its ugliness, has the advantage over them in health, and in the beauty of its women. Did ever any one meet a pretty girl in Paris? Yes, if she were an Englishwoman. Not else.

No one loves the blue sky more than I do; but what I complain of is the fog of Englishmen, who admire blue skies everywhere else, but refuse to look at them at home. I can but say for myself that when the warm mantle of our British moisture is lifted up, and I am enabled to gaze at the great air-ship through which our globe sails for ever and ever, along with the other ships that form the fleet of Heaven, I see a sky that is not to be surpassed in blueness or in loveliness in any part of the world. But, fortunately for us Englishmen, the blue sky is not always with us. If any one particularly desires to enjoy a very blue sky, let him go to Marseilles, and from Marseilles to Genoa, and from Genoa to Leghorn, and from Leghorn to Civita Vecchia, and from Civita Vecchia to Naples, and from Naples to Corfu, Constantinople, Egypt, and Nubia, and he will find what he seeks. But he will find something that, in his guileless innocence, he never anticipated. He will find a perpetual, irremovable, all-pervading, and eternal *SPLINE*. The word *spleen* is far too weak, pultry, shadowy, and attenuated to express the thorough and substantial meaning. It is *SPINE*—athletic and abledoid—that comes up from the gutters and gully-holes, from the highways and the byways, and seizes the unhappy wayfarer by the nose, and then by the neck, and knocks him down,

asphyxiated and helpless—to rise again, perchance, if his constitution be good, or a doctor be near to relieve him;—but not otherwise. And all from too much blue sky, without rain and fog to clear away the impurities of human and animal life. **THE BLUE SKY!** A little of it is a good thing, but too much of it is poison and death! It is the blue sky that breeds pestilence; and those who doubt have but to travel to the lands of malaria in Europe, and to those of the yellow fever in America, to doubt no longer. Blue sky—beautiful as it is—must be enjoyed in infinitesimal quantities, or it does mischief; and this is one of many reasons why we in England admire it on the rare occasions when we get it, and why we thrive so luxuriantly for want of it. Let the greatest grumbler against fog and mist, the most enthusiastic lover of blue sky answer one question ere he denigrate again; would he like the sky to be cloudless from the 1st of January to the 31st of December? He might if he were a fool, but not if he were a minister of state, or a member of Parliament, or a man largely engaged in business, or a mechanic working for his week's wage, or an unskilled labourer toiling for his daily bread.

Blue sky usually excites the brain, and makes a man rash, impetuous, and impulsive. Where does assassination most prevail? In the lands of the blue sky! In Naples, and Rome, and Spain on this side the globe,—in New Orleans, Mobile, Savannah, and all the yellow-feverish South on the other. Did ever any one hear of a Dante, a Giotto, a Vermeer, a Fleming, a Scotchman, or an Englishman, stabbing a foe in a chance quarrel? Rarely! If the thing occurs it is the exception to the rule. The rule in the land of Fog is to delegate individual vengeance to the Community and the functionaries whom it appoints. Patience, sobriety, calm judgment, order, and low grow out of the fog and the mist. The people who live under a perpetual blue sky take the law into their own hands, and are barbarians. Those who live in the fog delegate the power of the law to responsible officials, and never make themselves the judges in their own cause. Hence their liberty and their civilization, their press and their Parliament! For as mist is a physical, it must, to some extent, be a moral blessing. It is the ballast of the ship of the brain, and keeps the judgment steady in the men of the North, and makes them "canine," prudent, and far-seeing. In lands without mist and fog (to continue the metaphor of the ship), the main carries too much sail, is unduly stimulated by all the vagrant winds of fancy, and tilts over into the great sea of impulse, or into the whirlpool of madness.

Upon the picturesque as well as upon the social and moral aspects of mist and fog I could largely expatiate. Any one who has been upon a British mountain-top upon Suonond or Helvellyn, upon Ben Lomond, Ben Nevis, Ben MacDui, or the noble Goat-Fell in Arran, must, if he have any soul at all, remember with delight the solemn grandeur of the rolling mist beneath his feet, spreading away like a turbulent sea into the far infinitude, ever and anon heaving, and shifting, and changing into countless panoramas of ever varying beauty and magnificence. I know that in more youthful days, when I never caught sight of a distant mountain-top without resolving to place my feet upon it, a resolution which I seldom broke, and never for want of the will, I have shouted with joy, alone or in company, at the sublimity of the spectacle which rewarded me for my toil. I have remained for long hours amid the mists, in positions where to move a few yards to either side was perilous to limb and life, and where each person of the company—

"—seem'd spectral and remote;
A thing of shadows in a shadowy lead;
The mountain top and twenty years ago
The only visible earth, ourselves alone
The earth's subsistence."

And then when the mist was whirled away by a sudden wind, but seemingly by its own volition, and by the strength of its own inward agencies, I have felt overpaid a thousand-fold for all the peril and toil of the adventure, by a glory of glories, as of an unknown but yet familiar world emerging out of chaos, fresh with all the bloom and lustre of a new creation; hills, valleys, towns, rivers, and lakes, and far-off glimpses of the sea. It is not possible for any gorgeous sunset of the East or of the West, any sunrise of the tropics, or any magnificence of Egyptian noon, can surpass, in sublimity of effect the melancholy majesty of the Scottish mountains when their mists are set in motion by an Atlantic wind; and when, in the parlance of the people, "the Bens take off their nightcaps." Glencoe, with the mists upon the rugged steeps on either side of its blood-stained pass, is a scene which will teach respect for mist to any one who has once beheld it in its mountain birthplaces, however strongly he may prefer the more placid beauties of blue sky and green meadows.

It is only to intellectual mist and fog that solid objection can be taken. Misty speeches, misty sermons, misty essays, misty novels, and misty poems, are alike detestable, except to some of the young ladies, to all the simpletons, and to a few of the reviewers of this age. True genius is always as bright as sunshine. There is no fog in Homer, Shakespeare, or Milton. The great minds of literature sit on the highest mountain peaks, in a clear pure atmosphere, far above the regions of the fog, and look at the clear sun by day, and at the clear stars by night. It is only when they come down from their celestial heights, and mix in the ordinary business of the world, that they get into the fog. And being in it, the base world takes advantage of their simplicity and unworldeities, denies bread to its benefactors, and sends them up again to their mountain-tops, and to the contemplation of the blue sky, as specially as may be. Alas, poor Genius! Better would it be for thee if thou couldst understand the foggiest of the world a little better, so as to be able to make thy way through it, and profit by it!

vessels, or the great law-giver Moses, stretching the rock, from which burst forth the living stream to slake the parched tongues of the children of Israel—the fittest and most suggestive, perhaps, of all for a fountain dedicated to the poor: but whatever class of subject is adopted, let us be rid of those puerile animal conceits that are scarcely less offensive to all delicacy of taste than the filthy sporting “manikin.” Brewster’s “manikin” is a good deal better.

Another important consideration, which appears to have been entirely overlooked, is *sanitary*. We cannot think the attacks of hospitals and graveyards proper places for the erection of drinking-fountains. The water flowing from the little Norman structure, the first drinking-fountain erected in London, by Mr. Samuel Gurney, within the walls of St. Dunstons, appears to come from the mouldering graves, by which it is closely backed; and the pump in St. Paul’s Churchyard, to which has been added a drinking-cup, is similarly situated and equally objectionable; whilst the miserable contrivance at the railway terminus of London Bridge, attached to a gas-lamp, is in such close proximity to a repulsive structure, that the water is any degree of thirst can induce the passer-by to drink from such a source. Though it may not always be possible in overcrowded neighbourhoods to surround the fountains with pure air, there can be little difficulty in placing them apart from offensive matters or offensive associations. The enjoyment of a draught of water is increased by the brightness of the cup and the isolation from proximate impurities. The moral condition of the poor is not a little influenced by that which meets the eye. We desire them to drink, then let them do so under the most refreshing circumstances of sweetness and cleanliness, that they may be lured again and again to partake of the blessing that is offered.

The position of the fountain at the Oxford-street circus is better chosen, and offers an example for the placing of others in similar situations, where they might be erected under a covering that would afford shelter from the rain, as well as a place of refuge in the centre of thronged crossings. In our various cities, where we so often need, that it is surprising no attempt has been made to meet this deficiency. Light elegant structures, in ornamental iron, open at the sides, with a glass roof, would afford some protection from the weather, and be a boon to the public, who have so often to abide the peltings of the pitiless storm whilst waiting for a conveyance. In fountain, a shelter might be a work of utility and beauty, and contribute to the adornment of the town. There is so little of ornamental attraction in London streets, that the opportunity of introducing and encouraging it should not be lost. Our public statues can scarcely be said to decorate our highways and squares, but are for the most part a disfigurement and a laughing-stock. Unusually indicators have got possession of our lamp-posts, advertising their supreme ugliness to the passer-by; and ungainly and tasteless structures greet us at every turn. We can understand that, in the early stage of the fountain movement, its promoters would be more solicited to set the fountains on foot, than to consider the architectural excellence or fitness of them. Now that the good work is in active operation, we would earnestly impress upon the estimable gentlemen forming the “Association for the Erection of Public Drinking-Fountains,” the necessity of paying, in future, a little more attention to the choice of situation, propriety of ornament, and beauty of design.

THE HERRING FISHERIES.

Our herring fisheries are of great antiquity, and have always been considered as an important branch of industry; and very deservedly so, inasmuch as they produce a vast supply of food, especially for the poorer classes; give employment to a large population, and to no inconsiderable extent are a nursery for our navy, by continually encouraging and maintaining a hardy race of seamen. This being the case, any intimation of their decline instantly and very naturally suggests the necessity of the strictest and most careful inquiry into the cause. That they have declined in prosperity on the Scotch coasts, we believe, is not only matter of notoriety, but has for some time since been a subject of serious complaint. A question then arises whether this unfavourable change has resulted from natural causes, or been produced by artificial means; and this question is very easily answered—at least, if we are to believe several practical fishermen who have given their evidence upon the subject. They aver that the decrease in the number of herrings is to be traced to the unfair and illegal means which are employed for their capture—and this at a time when the fish are more numerous than ever.

The trawl and the drift-net are the two nets which are generally in use for the capture of herring. The former is illegal, and many contend that it ought on no account to be used at any season of the year: others are of opinion that it may be used only at certain seasons, and that it is the only implement with which the best and bravest fishers can be taken; but these persons would confine its use to the interval between the middle of June and Christmas, and at the same time insist on the meshes being one and a quarter of an inch from knot to knot. Whether these persons are right or wrong in their theory as to the use of the trawl, with the suggested restrictions, we do not pretend to decide; but of one thing we are quite sure, that the use of the trawl is the cause of all the mischief complained of, and if this be the case, it would perhaps be safer if the law were rigidly carried into effect, and its use altogether prevented. It is prohibited by law, but we know that the law is evaded, and that it is constantly used in and out of season, and with such small meshes, that thousands of small fish are captured which are unfit for use. That herrings are a migratory fish, and come from the northern latitudes, from those seas so difficult of access, which are covered for a great part of the year with ice, is a well known fact, and a naturalist makes the following remark as to the causes of their annual migration:—“The quantity of insect food which these seas supply is very great; and in that remote situation, defended by the icy rigour of the climate, they live at ease and multiply almost beyond conception; and from this retreat it is probable they would never depart, but that their numbers compel them to leave it. This mighty army begins to put itself in motion from the icy Sea early in the spring; this vast body is distinguished by that name; for the way to the herring is deemed from the term ‘herring’ an army to express their number, which is so vast, that were all the men in the world to be loaded with herrings, they could not carry the thousandth part away. No sooner is their

army quitted, than millions of enemies collect to thin their *armadas*. We are well aware of the number of enemies by which these fish are pursued, having frequently witnessed the arrival of large shoals of them on different parts of the west coast of Scotland. They begin to appear off the Shetland Islands in April and May; these are merely small shoals compared with the larger ones which arrive in June, during which time is given by the presence and noise of innumerable seagulls, gulls, &c., hovering and screaming over them, and by porpoises following in the rear. The quantities which we have, year after year, witnessed arriving, are so great that it would be difficult to suppose that any kind of fishing implements which could be invented would prove sufficiently destructive to decrease their numbers or thin their ranks; yet it appears by the evidence of competent witnesses, that the trawl with small meshes, when used unscrupulously in and out of season, has had the effect, in particular districts, of seriously injuring the fishing; and to such an extent, that the Lord Advocate has taken the subject into his serious consideration, with a view to further legislation.

The trawl with small meshes, when used during the winter months, not only captures innumerable small fish, which, if not wholesome, are certainly tasteless and of little value, but destroys thousands which are too small to be taken into the boat, and which, if left for a few months, would furnish a very valuable and wholesome food; and, moreover, it is affirmed—and we think with much reason—that the disturbance of the fish in the spawning-beds, and the dispersion of the fry, not only prevents the increase of the herring in the succeeding year, but that it acts upon that wonderful instinct which all living creatures possess, of forsaking those haunts which have become liable to disturbance, and seeking more peaceful and healthy more distant localities, for the deposit of their spawn and the rearing of their young. Self-interest and common sense, one would think, would suggest, even if the law did not insist, that the herring, which constitutes so considerable a source of food and wealth, should not be disturbed during any period of the spawning season; and that individuals who are blind to their interests, and indifferent to those of the public at large, as to commit this wholesale species of havoc, merely for a trifling immediate advantage, surely every exertion ought to be made to bring the strong arm of the law into operation to prevent them. Complaints have long been made, but in vain: the interference of the law is therefore our only resource.

The Scotch Fishery Board has the power of suppressing trawling; but, if several statements which have appeared from time to time in the Scotch papers be true, it has not exerted that power, but, on the contrary, has evinced an amount of supineness which has occasioned the greatest dissatisfaction amongst those who attach that importance to the herring fisheries which really belongs to them. If the trawl be injurious to the breed of herrings, and its use be illegal, why does not the Fishery Board make every exertion to suppress it? They have cutters at their disposition: how does it then happen that those who command them are not authorized by the Fishery Board to prevent trawling by the seizure of the illegal and unlicensed implements? That this is not the case would appear from the following statement, which we extract from an article on the subject in a Glasgow paper:—

“For several years past the trawling system has grown in magnitude, and in the length of time in winter in which it is prosecuted. Both on the east and west coast of Scotland there has arisen a great suppression, and the Scotch Fishery Board, which many seem to suppose had power sufficient to put it down, if it had chosen to employ them, has been very hesitantly handled for not having done so. It has been frequently mentioned to its discredit: that the trawlers have placed their nets under the bow of their officers’ command to stop the work, but because of the want of orders to do so from their superiors the Fishery Board.”

This is rather a strong accusation against the Fishery Board, and, although it has been made publicly, has not received any answer or explanation, which has provoked the further remark “that a watch or cutter not being what is supposed to be its duty is worse than useless, because it becomes a counter-nature and encourager of the wrong doing.”

If the Fishery Board has power legally to interfere and prevent trawling, we shall be glad to be informed why it neglects the performance of its duty? If it has no power, for what purpose is a cutter allowed to be present to give indirect sanction and countenance to an illegal proceeding? certainly the public have a right to be informed on this point.

There can be no question as to the injurious effects of the trawl when used throughout the winter; no one conversant with the subject disputes this; why is it then permitted, and of what use is the Fishery Board, if not either disarmed, or which has not sufficient power to interfere effectively?

If the injury done to the breed of herrings by this illegal mode of fishing were confined exclusively to the loss of a certain amount of food, even then the subject would merit general attention as well as that of the legislature; but the evil is not simply confined to this one evil; it involves a loss of employment to hundreds of our poorer population on the different sea-coasts where the herring-fisheries formerly flourished. It thus inflicts injury on the community at large by checking and discouraging industry which furnished sailors of the best description for the public service. The French Government are well aware of the importance of the herring fisheries in a national point of view; they well know they are a nursery for their navy, and consequently give them all the encouragement in their power, and why should we, under the immediate circumstances of the country, neglect all attention to so important a motive?

HOW TO FIND OUT AN IRISHMAN.—The Rev. Dr. Guthrie, in his late book on Ragged Schools, tells the following amusing anecdote:—“With all its drunkenness, I will not deny my country. I would find that, perhaps, as useless as did an Irishman of my acquaintance, who, when he was asked to give evidence, boldly claimed to be an Englishman, as to silence if not convince us. Unfortunately for him, an Irish lady who lived in our prison in Paris, had not forgotten, though she had resided long in France, the habits of her country. Fixing her green eyes on him one day at the table, she said, ‘I know you are an Irishman, for I have been in his throat by this characteristic, and to the English and Scotch part of the company, most diverting remark, “I know it, sir, by the way you peel your potato!”’

Navy, and shipowners who have made that the pretext for claiming immunities, have been laughed out of the field.

The Navy must now, therefore, if this were not necessary before, be regulated in conformity with the enlightenment of the mass of the population. "Jack" reads the newspapers; he has friends and relations who read them also; he knows what the rewards obtained for other skilled labour; he knows what liberty, what enjoyments, other men have, and he judges of the Royal Navy rather by the occupations of civil life than those of the merchant marine. He can no longer be kept in bondage or treated like a slave. Unnecessary restraints on his personal liberty—cutting him off too much, if not entirely, from the shore and from the society of the other sex, while he has large remuneration—particularly if these restraints be arbitrarily enforced, will no longer be borne. Such restraints were the source of the mutiny on board the *Princess Royal*, and as long as they are continued they will be sources of perpetual discontent.

Cruel punishments, too, such as flogging—which they themselves, in communications to the daily journals, describe as "degrading, demoralizing, detestable, dog-like, worse than slaves"—must be done away with. They are thoroughly at variance with the usages of civilized society, and by continuing flogging in the Navy we exclude from it the classes who are most sought after, and the best adapted to defend the country. On this point the opinions of naval men who cling to flogging as essential to discipline, must be overruled.

We can also venture to assert, that as the merchant marine has ceased to be the mirror in which "Jack" finds the opportunity of leading a life, the necessity has become urgent to reform the merchant marine, and make it more in accordance with improved civil usages. The great recommendation it still possesses is, that the crews are discharged at the end of each voyage. Their servitude is always limited to short periods; but the many complaints which arise at the end of the voyage—the very painful reports we continually read from the police-courts—remain us that our merchant marine is governed by usages and laws incompatible with maintaining our maritime superiority. Very often it experiences great difficulty in getting men, and notoriously is very frequently supplied by crimps with men of the very lowest description.

We must caution the public, too, against supposing that the usages on board American ships, with which our men-of-war are sometimes favourably contrasted, are what they ought to be. The terrible vices of our own mercantile marine derived from arbitrarily treating seamen, have extended to that of the United States. Manumitted partly by negroes, partly by the offences of our own ports, American ships are by no means models of those civil usages to which discipline and order on board ship must, as much as possible, be made to conform. It is the more necessary to draw public attention to this point, because the suggestion of Mr. Lindsay to make desertion from the capitalist shipowner a serious offence, like that of desertion from Her Majesty's service has met the approbation of the Americans. It would add to the degradation of a seafaring life were the rupture of a civil contract with a shipowner to be classed with treasonable offences against the State.

For a maritime population sea-going is not merely a healthy but a cheerful occupation. The dangers excite rather than damp the spirits of enterprising youth. In former times our shipping was manned by a respectable part of the population, who had generally an interest in the vessels, as fishermen now have in their boats; and even the foremost of our people did not disdain to enter for voyages of adventure. As shipping became exclusively a money-making service, and those who actually went to sea only toiled for a master, considerations more exclusively pecuniary guided the conduct of all, and the capitalist, always desiring to best down wages, was served by a class diminishing in respectability. The inevitable tendency to degradation involved in this process, unless under perfect freedom, was strengthened by the practices of the Government. For a long period they drove respectable men away from the sea. They were founded on a very arbitrary principle only too readily followed in the merchant marine. The conduct of the Government has always a vast influence over all the subordinate parts of society; and it is certain that the principles it followed in treating the seamen of the Royal Navy have had a very deleterious effect on the shipowners and on the men engaged to serve them. The merchant marine is now in a low condition, because the principles, hitherto followed in the Royal Navy, and imitated in the merchant service, have been arbitrary and unjust. Instead of looking to the merchant marine as a model for the navy, both, beginning with the latter, require extensive reform.

NATIONAL EDUCATION.

THE time is fast approaching when the subject of national education will be fully brought under public discussion, by the appearance of the report of the Royal Commission of Inquiry. Those who happen to know that nearly eighteen months ago the Commissioners announced at the Treasury that they were winding up, that the inquiry was finished, and that the salaries of their assistants might be discontinued, have wondered, of course, of this winding-

up has proved so tedious, and that the report, so anxiously looked for, is still delayed. But those who consider the enormous materials of which the Commission is composed as to opinion, and how much the main questions at issue depend on matters of theory in which opinion is not likely to be swayed by any amount of facts that can be collected, cannot be surprised that it has been found all but impossible to come to any unanimous conclusion as to the "means to be adopted for bringing a good and cheap education within the reach of all classes of the community."

At the very threshold lies the question whether the State ought to meddle at all with the education of the people; and it is well known that there are on the commission those who have always maintained that it ought not. It may be thought that the very fact of the commission implies that a system of national education is to be organized; but the terms of it—"what measures, if any, should be used"—provide for the possibility of the conclusion that the thing cannot or ought not to be attempted. There is little probability of this opinion carrying the day; but the fact of its existence must aggravate the difficulty of each succeeding step in deciding how and to what extent the State ought to busy itself in this matter. Suppose it settled that something ought to be done towards providing education for the people, it must be asked for what classes of them should it provide, that is, to how low an order should it reach, and how high an order should it exclude? Then, ought it to do the work in whole or in part? That is, ought it to make provision for the entire expense, or only a share of it? And if only a share, who is the remissor to be supplied? Further, by what means is the State to raise the money to administer the educational supply? Is it to be done by local taxation and management? And if so, on what class is the burden to fall, and in whose hands is the management to be vested? Or is it to be, as heretofore, by a Parliamentary grant administered from a Government office in London? Supposing all that concerns the ways and means to be agreed upon, there occurs the vexed question about what kind and amount of instruction the State ought to provide. As it regards the secular part, ought it to be wholly intellectual or partly industrial? And ought the intellectual to be merely elementary? Or, must the teachers be qualified to give instruction in grammar, geography, history, mathematics, natural science, drawing, &c.? And ought measures to be taken for inducing or compelling the children to remain long enough at school to avail themselves of the opportunity of acquiring these accomplishments? And suppose all that concerns the subject-matter of secular instruction fully decided, what is to be done about the religious? There are members of the Commission who are understood to be favourable to a merely secular education; but if they cannot prevail, how shall it be settled what kind or amount of religious teaching ought to be communicated? We hope to return to some of these points at a future time, in connection with facts which have been ascertained for their elucidation.

Perhaps, not the least serious of the difficulties attending the subject is, What is to be done with the extensive machinery which is now in operation, if any very different system be adopted? Many years ago our Government, not seeing the way to establish a national system, said to those who were benevolently devoting their energies to the cause of popular education, "We will help you if you will do this work in an efficient manner. If you will build school-houses such as we can approve, we will bear part of the expense; if you will educate a set of intelligent and well-conducted young persons to become teachers, we will pay you for doing it; if you will employ teachers whose qualifications we approve, we will be responsible for part of their salaries; and if you will induce the tolerably regular attendance of a certain number of children, we will contribute towards the various expenses of your schools, in proportion to the number thus induced to attend them." The offer was eagerly accepted, and, on the faith of these promises, between thirty and forty training schools for teachers have been established, and several thousand elementary ones for children. How are they to be dealt with? To drop them at once would seem a grievous breach of faith; to continue supporting them would be a serious hindrance to any new scheme, perhaps in more than pecuniary respects.

So formidable is this difficulty, that some time ago it was generally believed the commission would recommend nothing to supersede the present plan, but only that its provisions might be modified for the extension of its usefulness. Those, however, who, through their official position, are best acquainted with the Privy Council system, have been the most ready to declare that it cannot in the nature of things become a national one. Its fundamental principle is to help those who maintain schools of certain merits for their poorer needy hours. It deals with this voluntary agency, and with this alone, as its medium of access to the poor. Consequently it excludes, and unless completely revolutionized, it must for ever exclude, all those populations which are not so fortunate as to have benefactors rich enough, generous enough, and active enough, to prosecute the undertaking; all those likewise whose benefactors do not choose to involve themselves in the difficulties, and delays, and perplexities, and troubles inseparable from forming and maintaining a connection with the Privy Council. Every one sees, when it is thus put, that though

the present system has done immense good, it can never meet the whole case; that it cannot even with propriety proceed much further. We do not now insist on any of the natural or necessary consequences of its principles; on the fact, for instance—though fact it is—that so far as the Government assists those only whose case has already been taken up by private benevolence, and apportion its grants to the amount of that benevolence, it really gives most aid where least is needed; nor yet on the fact, though it can be proved, that the more it grants for education in each case, the further it places that education out of the reach of the very children for whom it professes to interest itself, namely those who, if neglected, are likely to swell the criminal population of the country. But we desire, in the first instance, to fix public attention on the insufficiency of the principle itself, that voluntary agency should be the indispensable medium of parliamentary grants for the education of the people. It is obvious that as soon as the sum required for maintaining public schools rises to an amount really felt in the taxation, the channels of its distribution should not be dependent on individual caprice. The administration ought to be such that every one belonging to the class for whom the provision is intended should be able to avail himself of that provision, without being indebted to any one's supplementary benevolence, or dependent on any one's personal whims.

The principle of the Privy Council distribution has been triumphantly stated again and again, to be that "it helps those who help themselves." This would be admirable if it were true; but there can be no greater fallacy than that which appears to be conveyed by this statement; for the fact is, that no account whatever is made of any help which the people themselves are disposed to give in support of education for their families. There is, however, a sense in which it is true. If it is considered—as indeed it seems to be—that the persons to be benefited by education are not the parties who receive it, but their secular superiors, who find it for their own interest to have them educated, and their clerical patrons of various denominations, who expect thus to swell the number of their own adherents, then truly the Privy Council does help those who help themselves to compass their own ends. But if the poor man pays his full share of the taxation in proportion to his means, he ought not to be considered a mere serf or chattel of his superiors, to be favoured with education for his children, or excluded from it, just as they may happen to be influenced by a calculation of their own interest. It is on this ground, first and chiefly, that we plead for the present scheme being superseded by a truly national system.

MAGYAR HUNGARY, OR HUNGARIAN HUNGARY I

THE doctrine of "natural frontiers" was first broached towards the end of the eighteenth century by the Abbé Siéyès. His object was to establish a pretext for the annexation of the Rhineland to France. Since then the doctrine has been applied by political theorists to a variety of cases—for instance, to Hungary, which, by the way, can boast of a tolerably clearly-defined natural boundary, if not in the entirety, at least in the greater part of her circumference. There is the Carpathian Wall, and the range of the Transylvanian Alps, towards the north and the east, whilst in the south the broad waters of the Danube or of the Save may be taken as a line of demarcation. In the west, it is true, the frontier is less defined. There we find, in the physical configuration of the soil, a transition somewhat imperceptible from the German to the Hungarian side. However, we are loath to adopt at any price the theory of the Abbé Siéyès. To carry it out would require long and sanguinary wars, during which states at present independent and flourishing would have to disappear before the incroachments of more powerful nations. Belgium and Holland would have to be struck off the map, to give place, the one to French, the other to German supremacy. Portugal would have to be merged into Spain; Switzerland would be partitioned; France and Germany tear each other to pieces, the one declaring that the Rhine was her natural frontier, the other insisting that geographical configuration, history, race, and language, all indicated the Vesges as the proper boundary. In short, there would be quarrels without end, and progress, civilization, and liberty would have to stand still or retrograde.

Side by side with the "natural frontiers" doctrine, another is at present in vogue, viz. the theory of the "Nationality principle." There is more sense in this; but still, care should be taken here too, lest men fly out into vague generalities, for which there is but little basis. If we only look at home, do we not find, in what we fondly call our "right little island," no less than five quasi-nationalities—the English, the Welsh, the Scotch, the Irish, and the French of the Norman Isles? And among the French themselves, have they not, on their soil, the German, the Flemish, the Breton, the Basque, and the Provencal languages, spoken by races most distinct from each other; whilst the French language, it is true, dominates as a superstructure? Has not Switzerland, in the same way, the German, the French, the Italian, and the Romanic languages, within a population of not quite two millions and a half? And are we, in consequence, to advise the dismemberment of that commonwealth to suit the conditions of the

nationality principle? Have not the Italians, otherwise the most united nation as regards "nationality," lost Savoy on the ground of that principle—Savoy, which gives to a powerful military nation the key of the Helvetic Confederacy, as well as that of the Italian peninsula?

But we need not multiply the instances of exception to the nationality theory, and only point to the fact, that whilst it appears desirable that a united and strong Hungary should exist, the materials for constructing such a one are certainly not to be found in any unity of race and language. There is no country on earth, containing, on a soil comparatively so confined, more diversified ramifications of nationality and idiom. If the north has been called by an ancient Gothic writer the *officina gentium*, Hungary might properly be termed an *olla podrida* of the human species. On her soil the Magyar, descended from the Hun, the offspring of the nomadic hordes of Attila, shares the broad acres with the Teutonic settlers, whose sires first immigrated under the early German emperors. The Rouman, who prides himself on classic ancestry, and who speaks a semi-Latin dialect, lives together with the Slavonian, who, by blood and idiom, has an affinity with the Russ. It is, in fact, a remarkable example of the "happy family" *ménage* applied to the nations. A common language for all classes is wanting, unless it is to be found in that receding Ciceronian language known under the name of "Husser's Latin," or in the German tongue, which is understood by a large portion of the more educated and well-to-do classes. Thus Magyar and German, Wallachian and Slavonian, form the Hungarian nationality—the Slavonian branching off into Slavak and Croat, into Raize, Ruthene, Schokaze, Bulgarian, and a host of other tribes, which, though allied to each other by consanguinity, have scarcely yet a common Slavonian idiom. Of Gipsies, Arnauts, and other fragments of races, we will not speak, nor allude more than cursorily to the fact, that, besides the Catholic, Protestant, and Jew religion, the doctrine of the orthodox Greek Church is professed in Hungary by more than two millions of people. There is no lack of variety in this polyglot country.

But it is impossible, for all this, that a united Hungarian kingdom should exist! History has shown the contrary. For a thousand years that country, under the leadership of the Magyar element, has been bound together, with but few intermissions, by political ties; and strong and unquenchable has been the spirit of independence, as well as the aspiration to self-government there. The war of independence of 1848-49 has shown the active energy of populations so diversified in race and tongue. The history of these latter days has proved how tenacious these populations are, in spite of eleven years of despotic terror, and how even their passive force is able to wring concessions from an unwilling and tyrannical ruler. This is certainly evidence of the compact, and, if we may say so, "national" character of these Danubian races; albeit the nationality principle which the propagandists of Paris spout forth for the benefit of their master, the great "Annexander," is certainly nowhere less applicable than in Hungary.

From the foregoing it will be seen that the scheme of constituting an exclusively Magyar Hungary, which has been attempted by Austria, in the true *divide et impera* style, can never be accepted by Hungarian patriots. The Court of Austria, after the overthrow of popular liberty in 1849, cut off from Hungary not only Transylvania, Slavonia, and Croatia, but even the Temesch Banat,—thus surrounding Hungary proper, as it were, with a ring of non-Magyar provinces, in which it was hoped a feeling of jealousy, of antagonism, of hatred, against the Magyars would be fostered. The Magyars were to be neutralized, to be rendered powerless, to be politically stifled. Events have proved that this is rather a hopeless task. Yet, even after the Austrian Government has been compelled by dire necessity to give up its harsh and cruel policy, there is still a desire lurking in the Hofburg to detach the so-called *Partes Aduectæ* from the kingdom of Hungary, and thereby to weaken its political and military strength.

The leaders of the Opposition, we understand, will combat this plan at the forthcoming Conference at Gran. They will insist on the reunion of all those territories which before 1849 formed part, in a more or less strict manner, of the "Hungarian Crown." They are right in doing so. There is no reason why the ancient Danubian confederacy should be dissolved into its several component parts, unless it be for the advantage of a governmental despotism at Vienna, or to further the Pan-Slavistic propaganda carried on by Russia. Everything else speaks only in favour of a strong Hungary, on the large basis of its historical frontiers. We may cite here some passages of a speech Kosuth made on this subject in the United States, at a time when Plonjowski had not yet the influence in European politics which it possesses at present:—

"Permit me," said he, "to speak on the question of Nationalities, a false theory, which plays so mischievous a part in the destinies of Europe. No word has been more misinterpreted than the word nationality, which is become, in the hands of absolutism, a dangerous instrument against liberty."

And again:—

"If language alone makes a nation, then there is no great nation on earth; for there is no country, whose population is counted by millions, but speaks more

than one language. No! it is not language only. Community of interests, of rights, of duties, of history, but chiefly community of institutions, by which a population, varying perhaps in tongue and race, is bound together through daily intercourse in the towns, which are the centres and home of commerce and industry—besides these, the very mountain ranges, the system of rivers and streams; the soil, the dust of which is mingled with the mortal remains of those ancestors who lived on the same field, for the same interests; the common inheritance of glory and of woe, the community of laws and institutions, common freedom or common oppression—all this enters into the complex idea of Nationality."

In this sense Hungary is a nation, and must insist on remaining so, in spite of theories which, while flattering the ear as the most new-fashioned phrase of progress, would in reality lead us back to an ante-historical state of utter barbarity.

THE RATE OF DISCOUNT.

THE Bank of England, on Thursday, reduced the rate of discount from six to five per cent. The efflux of bullion from its own coffers had been arrested; bills were discounted in Lombard-street below the Bank rate; money, instead of coming out of the public securities to supply the demands of commerce, was going into them, showing that commerce did not want it, and the Bank had no alterative but to reduce the rate. Had it followed the suggestion of our Correspondent some weeks ago, and then raised the rate to five per cent., which was required to meet the demands of commerce, it would not have seen itself compelled to raise the rate to six per cent. one week, to lower it to five, for its own convenience, two weeks after, while there have been no similar changes in the relations between capital and commerce. The Bank of England has been hampered by the conduct of the Bank of France; but capital, for the supply of trade, has been uniformly and steadily abundant in the general market.

MEN OF MARK.—No. XI.

THE LATE WALTER COULSON, Q.C.

In reading the name of this gentleman in the ordinary obituary of the daily journals, the public would hardly be aware that a person of very considerable celebrity and great worth had passed from amongst us. Yet those acquainted with the history of Mr. Walter Coulson, Q.C., know that, for many years, he has been "a man of mark" in the business of the nation. The situation he filled, for many years, as Parliamentary Draughtsman or Counsel to the Home Department, made him practically one of our chief legislators. All the measures devised by Government, to be submitted to Parliament, were reduced into form by him, and every one, more or less, felt the influence of his mind. His labours, unlike those of a favourite orator, who never opens his mouth, whether in Parliament or at societies, whether he utter foolishness or wisdom, truth or falsehood, without the public being called on to admire and applaud—were all silent and obscure, and affected the march of events in a manner unknown to the world. Formerly this was still more the case, when Mr. Coulson was a member of the press, one of these anonymous editors, who day by day impress their views on the public mind, bringing about, in time, revolutions at which the unthinking stand and gaze with wonder. It is as one of these—as an illustrious member of the craft in which we are humble participants—that we desire to preserve, as far as we can, the memory of a man so able and so excellent as Walter Coulson.

He was, we believe, a native of Plymouth, and first known in London as a *proofreader* of Mr. Bentham, and a parliamentary reporter for the *Morning Chronicle*. A short time before the death of Mr. Perry, he became attached to that journal, and then there began the friendship between him and the late Mr. John Black, for several years the editor, which was alike honourable to both. With Mr. Bentham, Mr. James Mill (the historian of India), and Mr. Francis Place (the active parolical Westminster Reformer), Mr. Black was closely connected, and with them also Mr. Coulson lived in habits of the closest intimacy and friendship. His labours were not confined to reporting—though, in those days, the task, from the general want of familiarity with the subject, was more difficult than now—and he wrote articles for the *Edinburgh Review*, particularly a notice of Mr. Mill's "History of India," which gained him at the time great credit, and added to his literary and general reputation.

When the *Transfer* and the *Globe* were united about 1829, he was appointed editor, and for some time performed the arduous duties of a reporter for one journal, and of editor for another. As the success of the concern became assured, he gave up his connection with the *Chronicle*, and confined his labours as a journalist to editing the *Globe*. For several years he filled this post, wrote leading articles, and contributed by his wit and his wisdom to forward the great reform which the Liberal party achieved in 1832. Many others contributed to this great end in a similar sphere, who are now as little remembered in this capacity as Mr. Coulson; while some, who rather took advantage of the occasion, then helped to ripen public opinion, are still honoured as the authors of the change.

Mr. Coulson's labours were not confined to the press. He had been called to the bar at an early period, and the reputation he had acquired as a journalist was by no means an impediment to his success as a barrister. Connected with the leaders of the Liberal party, and being a man of remarkably sound judgment, endowed with a capacity readily to acquire knowledge, his friends looked forward to his reaching the highest position in the arduous profession of the law. From a natural reserve, as from an innate hatred of every kind of noisy vulgarity—possessing a refined and truthful intellect, averse from mixing with anything false, harsh, and

duff, abhorring the arts by which sharp practitioners and noisy declaimers win their way in law-courts and in the favour of the multitude,—he never practised that pleading in public which makes every barrister a public man. He was an acute, well-instructed, profound lawyer, a fearless logician, a witty and a jocund and a sarcastic talker; but he was not an orator. Hence he was far less known to the world than many a man in every way his inferior.

The Whigs, however, to which party he belonged, and especially Lord Brougham, knew Mr. Coulson's worth, and when the great change was made in the administration of Indian affairs, the post of collecting information on the laws of India, and drawing up a code for the country (which was afterwards filled by the late Lord Macaulay), was first, we believe, offered to Mr. Coulson, and declined. He was then gaining wealth and distinction at home, and he wisely avoided the risk of shortening his life by the anxieties of such an office in India, merely in order to accumulate a large fortune with greater rapidity.

The branch of the profession which he selected was that of a conveyancer, and in this he became very eminent. He was much employed, especially by the late Mr. Morrison, of the well-known firm of Morrison, Dillon, & Co., and acquired considerable wealth. Fortunately he was not amiable; and, though the highest places in the Government were within his reach, he contented himself with a position higher in the scale of social enjoyment than of political renown. He loved society; he loved conversation; he lived with his friends, and was, as the world goes, what must be considered, a happy man. He could assist those he loved, and to him, more than to any other individual, was his former chief and friend, Mr. Black, indebted for the comfort in which the last few years of a very laborious literary life were passed.

The situation Mr. Coulson held is one of great responsibility, and he filled it carefully, performing with little a diligent performance of duty in silence to demand the notice and approbation of a not very discerning public. But for these few words of well-deserved eulogium he might probably have passed away wholly unremembered, for his name does not even appear in that account of the fourth estate which was compiled only a few years ago, by one of its members, to give an accurate history of the distinguished writers for the press. The few facts here noticed are stated from the personal recollections of one who laboured with him on the same journal and in the same cause.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

The news by the last China mail breaks off at a most tantalizing point. It is not merely the anxiety felt for the officers, civilians, and chroniclers of this interesting crisis brought under the very walls of Peking, that occupies our minds, but there is also the uncertainty that was over the progress of the negotiations. There is no doubt that the capture of so many gentlemen, whose assistance was so essential at such a moment, must greatly embarrass Lord Elgin and Baron Gros, and there is too much reason to fear that the Chinese, who know the value of their prize, may be puffed up by this chance success, and protract the settlement, which Lord Elgin is evidently so anxious to bring to a close. There have been three Cabinet Councils held, and one Cabinet dinner at the Chancellor's house, since the arrival of the despatches, and the Queen herself is most anxious for further intelligence. I cannot help taking an augur view myself, and I still cling to the belief that the final settlement is certain to come soon, and that the pacification is only deferred for a very short time. But the dangerous and very costly.

The regiments left at Tien-Tsin have gone to reinforce the main army in the front, and their place has been taken by the marines, who have been handed to garrison that fort, which is, as it were, the base of our operations, and between which and Tung-Tsueh it is necessary to keep open, and to protect, the water-communication. The delay at the commencement, caused by waiting for the French, is now severely felt, and our Allies, after all, are behind as generally in all the forces necessary to bring the war to a speedy end. It was to be expected that they would not have had anything like a proportionate naval force; but they have no horses, and their Infantry is not two-thirds of ours. Still the force is first rate—though small in comparison with the Chinese—and I have no fear of the result in fighting, so long as we are not cajoled by deceptive attempts at negotiation.

The Italian news is considered good. Things are progressing in the right direction. It will take some time to settle, but in the mean time it is satisfactory to see that the army and the navy of Italy are thoroughly cared for by the government of the King. It may still be hoped that the great struggle, which is threatened in the spring, may be averted, and I think it will. If Austria be wise, she may yet avert the storms that threaten her on every side; and if she can keep out of the *middle*, there will really be no choice left to the Pope but to make friends with the King and the people of Italy. I have some strong information, however, that the Hungarian estates are busy; and that the people of Hungary, Croatia, and Transylvania are prepared to rise in revolt. Nothing but wisdom and courage can save Austria from a revolt of some of her best provinces, and Europe from a general war. We are well prepared—and at the same time with every desire to prevent so dire a calamity.

At home we are prosperous and content, in spite of the undoubted loss from the worst season on record; the only disturbance in trade is feared from the other side of the Atlantic. Commercial interests are proverbially sensitive. Sidney Smith said that nothing was so capricious as the Three-per-Cents. The moneyed people are not at ease, although the Bank has reduced the rate of interest again. But all well-informed politicians at this end of the town look upon the noise made by the Southern States party in America as so much stage trick to influence the policy of the new President, who is not a man to be deterred from the exigencies of the great position to which he has been called by

the public voice of his countrymen. When the late Mr. O'Connell was engaged in his latest and noisiest agitation, a friend of mine designated his proceedings as totally free from danger—nothing more than "Irish Dialectics." I suspect there is much of this which the Americans, in one of their own significant slang phrases designate as "Buncombe." Our commercial friends need not fear. The Election squabbles in the States will settle down before the 4th of March, and Mr. Buchanan will keep the White House at Washington safe and sound for his worthy and successful successor.

The Attorney-General has proceeded, as I told you a couple of weeks back, in his visit *ad solium imperatorum* in the case of the mysterious death of the child at Road. The Court of Queen's Bench naturally took the case into consideration, but a rule nisi in the first instance, in order to enable the coroner to be heard, who is to some extent, though not criminally, implicated in the inquiry. The delay has arisen from the necessity of sending down a writ of *certiorari*, to bring the inquisition into court. The rule served on the coroner is not returnable until the first day of the January term; and although the judges declined to grant an absolute rule in the first instance, enough has transpired to make it sure that they will do so, when the proper time arrives. The inquiry will be intrusted to a commission, consisting of barristers and officers of the court, and the public will have the satisfaction of a full and searching investigation, whatever may be the result.

The Metropolitan Police Authorities are loud in their complaints of the want of assistance on the part of the local constabulary, and, indeed, the coroner and the jury must be said to have been particularly careless in their investigation of this affair.

There are some curious cases set down for hearing in London within the next day or two. In one of these, a queen's counsel has taken the unusual course of disposing of his leaving property to the relations of a deceased person, who had previously left it to himself. Another is an action for false imprisonment, brought by a young female against the heads of Kensington University, in pursuance of the custody of the proctors, now so generally condemned. Whatever way the case goes, it will probably be the death-blow of a tyranny which is no longer fit for modern times.

The notices given in the *London Gazette* for Private Bills in the evening Session are more numerous than any since the memorable year of 1815. Several of these relate to the metropolis. Of these the two most important and interesting are the one for the "Thames Embankment" and that for the Courts and offices of the law between Lincoln's Inn and Fleet-street, and the Strand. The first is promoted by the Office of Works, and will probably be carried out by the Special Commission, although the Metropolitan Board are trying hard to get the job. The second will be ably seconded by the Attorney-General, who is anxious, on the part of the profession now scattered across the town, to promote this most desirable improvement, the consolidation of all the offices of the courts. There are ample funds in hand in the Fee Funds of Chancery and the other Courts. The public, too, will be vast gainers in the architectural improvement of so central a neighbourhood, and in the removal of some wretched and crowded courts and houses, and not least in the destruction of that most unightly and incongruous structure, Temple Bar. The Metropolitan members ought to stir themselves in support of these great improvements of our streets and thoroughfares.

There is an admirable plan to connect the City and West-end by a branch railway from the Charing Cross and South Eastern line, to cross the river to the back of the Mansion House.

There are several projects also for large hotels on the American model. One is to face the Strand, and to destroy Holywell and Wyck-street, running back to Lyon's-Inn and New-Inn. Another, more promising still, is to face the river, with no embankment, on the east of the new Westminster Bridge on the Millbank side, to match the Houses of Parliament, taking away Manchester-building, Cannon-row, &c., with another front in Parliament-street. This is a most favourable position for a great enterprise of the kind.

There is a project for a new bridge from Millbank to Lambeth, but it is embarrassed by provisions for taking tolls. There ought to be no more toll bridges in the metropolis, and there ought to be a public, open bridge on the site of the old Hersey-bridge. Mr. Paine's beautiful and commodious new bridge at Westminster will be finished next year, and some means should be provided to sit him on the erection of another where it is so much wanted by the inhabitants on both sides of the water. The Marquis of Westminster and the Archbishop of Canterbury ought to join heartily in promoting this good work.

There is not much new this week in the theatrical world. The latest novelty is a lively *Spanish dancer*, at the St. James's, who is a complete success.

Madame Doche has continued to fill the *Edgewood Theatre* in the Haymarket, spite of the dull season. It is inexcusable why the Lord Chamberlain will not allow her to appear in her best part, the *Dance aux Canailles*, which surely might be produced in French, as well as in Italian.

Mr. E. T. Smith has been playing with his audience by announcing Mr. Sims Reeves, and substituting Mr. George Fennell, at which the audience express their indignation in no measured terms. There is an English singer, a Mr. Swift, substituted for the formidable Giuglini in *Italian opera*.

THE POST-OFFICE.

The Post-office is one of the most important official branches of the Government. Its business may truly be said to come home to everybody's door. So vast, and yet running into such minute details, its management requires great comprehension, and the discharge of its duties infinite particularity. In both ways it is intimately connected with the broadest principles of policy and equity, the wisest rules of just government, the most accurate yet liberal views of financial science, and administrative powers at once efficient and humane. That there are shortcomings in some of these requirements we pointed out in our

third number, and followed the subject up with a few further remarks on the ensuing week. Having by this means attracted public and official attention to it, having bronzed the inquiry, and stated certain striking facts, and suggested possible improvements, it seems to be peculiarly incumbent upon "THE LONDON REVIEW" not to suffer the subject to drop.

The Rev. Ordinary of Newgate, Mr. John Davis, makes, *ex officio*, an annual report on the gaol to the Lord Mayor and Court of Aldermen. An individual of clear good sense, true humanity, and great experience, it has gratified us to observe that in his recent report for this year he has not only endorsed and enlarged upon our statements, but warmly adopted our views; and brought his singular knowledge of the statistics of crime and punishment, of the character of the prisoners, the nature of their antecedents, and of the just measure and effects of their sentences, to bear upon this question. The Rev. Reporter notices that the delinquencies in the Post-office seem to continue with unabated perseverance, and (well-informed as he is) observes that "the remedies against this species of dishonesty are not to be looked for in the prison, nor in the sentences passed upon offenders; for no better-behaved men can be found in any of the prisons, and the sentences are out of all proportion severe, compared with such an act of dishonesty committed by a carrier's servant."

We are not of those who fall into one of the prevalent, and by no means innocuous, fallacies of our time, and join in the mania for whitewashing every criminal, especially the most atrocious; re-trying them without judge or jury, and endeavouring to shield them from whatever retribution the law has awarded. On the contrary, we deem the now over-operating desire to reverse the verdicts of juries, and obtain a second, irresponsible, irregular, secret, and, of necessity, imperfect consideration of every case, to be most injurious to the righteous ministering of justice, and dangerous to the public weal. It is as great an encouragement to murder, poisoning, and lesser felonies, as can be imagined, and Mr. Davis is well aware of its fatal influence.

But we do deprecate the Post-office system of inefficient pay for excessive toil, leading to the dishonesty of the clerks, and the consequent great and probable consequences cited in letters, and the demand for vindictive punishment. We formerly cited the case of a first officer after eighteen years' service—we are not excusing the robber—but eighteen years, without a chance or prospect of promotion or improved circumstances to cheer him on, a wife and six children, and only a thin bit of paper between him and relief from want, is some temptation; and becomes cruel, when purposely placed in the man's way. In such cases as these it will not do for the rich and untempted to lift up their hands, and wonder how poor men can commit such offences. The wonder would be if they did not commit them.

In trivial mistakes, the Post-office functionaries are no pretences, as to be almost chronically busy with their small proceedings. They are penny-wise but, in these really important affairs, they appear to be more than pound-foolish. The costs of the prosecutions are enormous; the habits of espionage, thoughtfulness, and inaccuracy is increasing, in spite of the present precautions and penalties. Surely some remedy should be tried. We ventured to suggest that money orders under £1 should be granted for one penny, and thus the enclosure of bills be discontinued. Mr. Davis offers his opinion, that "very much good would be done if the Post-office either positively refused (could they without an Act of Parliament) to convey bills in letters, or made the price of a Post-office Order for sums not exceeding ten shillings, one penny." We would go to the point, but it would be something to know half-crown or five-shilling pieces out of weak paper envelopes, at the charge of registry on a money letter, or the more usual risk of posting without any cover whatever. We believe it would get rid of one half of the existing temptations, and save many a wrench from ruin.

We have reason to believe that the Post-office authorities have entered upon the investigation of the evils we have brought under their and the public notice; and we shall be well contented if our movement in the cause leads to the application of the needful reforms.

MODERN ENGLISH WOMEN.—No. I.

THE INFLUENCE OF WOMEN.

It is impossible to over-estimate the importance of woman's influence. Beginning before birth it ends only with death, during life pervading the whole moral and social spheres in its quality of light or darkness—with the blessing of love or the curse of sin. As mother, wife, and mother, woman is always the chief power of a man's life; the hand by which he is shaped to nobleness and virtue, or warped to evil deeds and deformity of soul. Not as the graceful ornaments of society, nor as the ideals of human beauty, nor as the sources whence flow art and poetry, nor yet as the sharers of his love and the dear companions of his home, are they of this supreme importance to man, but as the guardians of private virtue, as the watchmen over the standard of public morality, as the ultimate arbiters of good and ill, who, if they hold the lower way, drag all the world down to the baseness of their level. When women are bad, men are vile; when women wander into evil-paths, men respect no markings of law or nature. It is useless labour to seek to elevate men while women creep in the lowly range, careless of all progress, and defiant of most virtues; for, though God has given the thews and sinews which work and do to the one, He has given the spiritual force which stimulates and excites to the other, and, unless that force can first be roused, the thews and sinews will never do more than hollown work. The instinct which, under unworthy conditions, is the most ignoble of all influences, becomes, when nobly born, the unswerving of the highest efforts and the source of the deepest virtues in man; and it is for this reason, that what manner of woman has borne him, and what manner of woman he loves, and with what love he loves her, make or mar his spiritual conduct for life.

There must be some special reason for the peculiar regard paid to female reputation by all nations and eras. It is not only man's strength, his self-reliance, nor the tyranny of a jealous love, which demands this singular purity and steadfast adherence to the highest morality; nor is it only for

the preservation of direct lineage, and the rightful transmission of property. No great noble truths rest on such shifting foundations as these. Though the wholesome wheat may get mixed up with chaff and straw, it has always within itself the divine grain of life—always is useful food for the human family. We cannot make our daily bread of wheat. What, then, is the hidden meaning of our large regard for women?—of our tender regret, or our fierce abhorrence, at any departure from the higher law made manifest among them? Why is the indulgence which is so readily shown to the male prodigals, so rarely extended, even to mercy, for the female wanderer? Truly there may be some reason for this in pride, and the evil disposition of society; in the instinct, so large with some, to crush the weaker; in the disallowing of equality in action to women; and the many other small social injustices under which they labour. But behind and deeper than all this, lies the indelustrable need which the world has of a high living standard of purity, and the fact that to women is bestowed the sublime and sublime substance by example. On this ground, then, of influence, the national character and position of women is of vital national importance; it is the concrete expression of public morality; the wave-line which marks the height of the tide, and shows how far the sterile sands extend, and where the rich growth of God's best blessing begins. Where stands that wave-line with us! Have we redeemed something of the sterile rock, or have we suffered the salt waters to steal onwards over banks where once grew sweet flowers, and healing herbs, and the heavy weight of fruit raining beauty and richness on the ground beneath? Perhaps we have done both. Perhaps we have rescued from salt and lapidation the land, but have not sown the seed of life on the other; planted gardens where lately were but long lines of worthless woad, and seen the hedgegrove and fruit-trees of old time swept down by the advancing waves of a new and tyrannous evil. Relief in the absolute value of the past is a folly; if no worse, for the divine law of life is progress and the infinite elevation of humanity. We cannot go back. But if progress is not always regular; civilisation never comes in a straight line, without sideways and deviation; and so with our modern womanhood. Where it stands in the front ranks here, it has fallen back among the bellows elsewhere, making the line a long flat waver with compensating rises in the rear, but always in the rear. The line of the future. To save the stakes planted farther afield may well excuse the partial losses. To save the slack rope swings back, and the wind drives the cord sharp from the poles. To know that women, as a race, are better educated, more refined, more self-reliant, fitter to uphold the truth, and bedazzled to see what is truth than formerly, is a gross gain; it is far greater gain than the losses suffered by the fashionable follies, of which I shall soon have to speak. Yet inasmuch as to woman is given the charge of the sacred fire, it is needful that she keep her vestal garments pure from all stain, that she never slackens in her work, and never lets the flame burn down to blackened ashes. The world's best teachers of what is good—if they offer evil in its stead, but little hope is left to humanity.

Everything comes from them. The child's first prayer is taught by a woman; the man's noblest deed has ever the influence and the love of woman in it, else it is not of the noblest; the high-bred gentleman learns his gentleness and chivalry from his mother; the higher education, the poet's deeper insight into nature and the human heart, half the progress of conscience is made for her exclusive needs; and without woman to refine him, man would soon sink into barbarism and insensible coarseness. It is the true motive force of society, the firm which sets all that mighty machinery in action. It is because woman is the truest saint, and her office of perpetually looking upward, that we resent all vice and vulgarity in her so much more strongly than in man, and lament over her moral delinquencies with the passionate lamentation as for a great life destroyed. Her petty meannesses, her small jealousies, her want of judgment, her slanders, and gossip, and reckless expenditures, and shallow intellect, and all the other shortcomings of her lower nature, we pursue pitilessly; not from evil nature or want of the truest reverence and love, but rather with the writhing sorrow of those who have been wronged falsely, and now see in the idol overthrown but scoured rage and painted wood, where once they believed stood an angel from heaven. It will be no good sign when woman's sins and follies are accepted as of course, and meet with only a scornful indulgence, as who should look for ought else! This, too, is the reason why the world is so bitter against all so-called *maternalism* when made on the woman's side. We forgive the youth who marries his mother's maid, but bar our doors for ever against the girl who runs off with her father's money. The maid, by virtue of her womanhood and the grace of sex, may be fashioned into the possible semblance of a gentleman; the coachman will never be a gentleman, for his mother's hand shaped him from the beginning, and that impression can never be lost. Our lady girl who marries him must sink to his level; she cannot raise him to hers, and he will be a coachman to the end of his life. From her, but not for retrogression—because she has failed in her appointed service as spiritual leader and social refiner—that we cast her out, and refuse to her the pardon our coarser sex has little trouble to obtain. Very unjust, doubtless, to the individual; oftentimes very cruel, very heartless, and a shameful sacrifice of the higher good; but the human race progresses frequently unward event is, after all, but the recognition of her higher worth and natural office, and thus is not, in its origin, all a social beseness or a moral crime. Thus, too, is there a great truth in the ambition so characteristic of women; it is not only woman and self-love, but, like all else, has its deeper inner meaning, which rebukes it from within, and is wiser than folly. Still, the casting-off of girls who marry their father's coachman, or who do worse even than this, must not be advocated as a rule of right; only it is good sometimes to remind the rulers why this cruel thing is done, and show them where the wholesome root lies deeper than the poisonous flower. Neither must that characteristic ambition be encouraged till it broadens into worldliness and heartless pride—the real is forgotten in the seeming.

High-minded, noble, delicate, trusting to her instincts, and not ashamed of the feminine quality of her brain, nor anxious to be that something less than man which is the sad sign of unwomanly women—glad to live in her affections—glad to be the recipient of stress and the gift of purity—grateful for the gracious duties of her home—grateful for the precious burdens of maternity—grateful that her path lies in the sheltered ways, and that the keen winds do not blow and the sharp struggle is unseen—loving, giving,

self-devoted—commanding by an unseen influence—guiding with a silken rein as light as it is firm, as elastic as it is true—moulding body and soul, and giving shape and laws to a world, as the future generations hang upon her breasts for life, and take from her lips those first great lessons on which all the rest rests—builder of the ark where peace and trust and love and the revival of man's wearied strength overshadow, as with angel's wings, the mercy-seat of home;—what is there in a woman's lot, when rightly taken, which should seem scant and poor to herself, and rouse up a host of friends to cry out on its injustice? It is the fullest and most beautiful of all upon this earth, where we love reverence, and love to be reverenced, and worship as the divine mystery of loveliness whom we dare not approach too near, and fear to sully even while we love;—wife, who stands by our side as the helpmate sent from God, without whom the world were blank, and life too hard a toil—friend, counsellor, beloved;—mother, whose love makes our young heaven, and the memory of whose virtuous shames like our guiding star in woe, through the outside storms and bear our part in the great fight of souls, teacher of all good, our first, best friend of noble life, faithful and wise when the days of our own influence have come, and we seek anxiously for direction how best to direct; oh! would you did you know this triple crown of gold for the soiled head of unsexed youth, the peace and scars of many strife! Has Love no throne for you? has Love no place of rest? does life mean only strong outward action, and is there no grace of service, no gift of love, no appointed work, or sweet office of charity and help in the portion which God and Nature have allotted you? Believe me, sisters, the rich-natured woman can and her husband as her own soul, and fill him with the peace and high up-lifted that not an idle moment shall be left for weary complainings. It is not nature, nor yet society which impoverishes the life of woman—it is her own blindness—as to her real duties, her own ignorance of what is her best happiness, her own waywardness in tramping under foot that which she has, and her selfishness as her own soul, and fill him with the peace and high up-lifted that not an idle moment shall be left for weary complainings. It is not nature, nor yet society which impoverishes the life of woman—it is her own blindness—as to her real duties, her own ignorance of what is her best happiness, her own waywardness in tramping under foot that which she has, and her selfishness as her own soul, and fill him with the peace and high up-lifted that not an idle moment shall be left for weary complainings. It is not nature, nor yet society which impoverishes the life of woman—it is her own blindness—as to her real duties, her own ignorance of what is her best happiness, her own waywardness in tramping under foot that which she has, and her selfishness as her own soul, and fill him with the peace and high up-lifted that not an idle moment shall be left for weary complainings.

And now my question is with our modern English womanhood, and how far she fulfils its divinely appointed duties, and whether its office of ennobling spiritual leadership is being maintained, or whether it is being lost. There are many sharply-defined characters among us—typical women, in fact,—to describe whom is to describe so many distinct moral and social phases, so many distinct faces, and the rulers and governors thereof; and by them we shall see why some fail and others succeed, and what are the spots and stains which shame that beautiful white robe which ought not to bear the slightest shade upon its glory.

SPIRITUALISM—ELIZABETHAN AND VICTORIAN.

[FIRST ARTICLE.]

THE age has been truly termed an age of revivals. Of these revivals by far the most curious and exciting is Spiritualism. By many it is regarded in the light of a celestial novelty; but if there really be anything new under the sun, most assuredly it is not the doctrine of spirits now so fashionable among people of all ages and of all complexions. Spiritualism, indeed, corresponds closely to the demonism of ancient times. Thousands of years since we meet with it on the banks of the Jordan and of the Nile, in the seven-billed city, and in the classic land of Greece. We find it in mediæval Europe. To go no further back in our own history than three hundred years, we find it flourishing in the neighbourhood of London, with a man of undoubted genius and great learning for its expounder and chief priest, and princes, peers, and other fashionable folk amongst its firmest partisans. Now, while the public are discussing the claims of the spiritualists, and the objections of their opponents, it strikes us that a quiet glance at some of the main points of resemblance, as well as of difference, between the spiritualism of the sixteenth and that of the nineteenth century, will be the means of dispelling some ignorance, will furnish matter for much interesting speculation, and be otherwise productive of useful results. And first for a few words respecting Dr. Dee, the leading spiritualist of Elizabeth's time.

"A very considerable fellow-member of the body politique governed under the scepter royal of our earthly supreme head (Queen Elizabeth), and a lively sympathetic and truly symmetrical fellow-member of that holy and mystical body antithetically extended and placed (wheresoever) on the earth," such is Dr. Dee's opinion of himself in his "Letter Apologetic" sent to the Archbishop of Canterbury in 1594-5.

From the full, accurate, and interesting account of Dr. Dee in "Memoirs of Extraordinary Popular Delusions," we find that he was born in London in 1577; that in early youth his habits were those of a bad student; that through his passion for alchemy and astrology he got suspected of sorcery at Cambridge; that making his way thence to Louvain, he devoted himself still further to the study of the occult sciences; that returning to England at the age of twenty-four he set up in London as an astrologer, and "lived by casting nativities, telling fortunes, and pointing out lucky and unlucky days;" that after some time he was elected with Henry, and with attempting the life of Queen Mary by his incantations; and that, escaping the deadly perils of those days, his prospects were improved considerably on the accession of Elizabeth, who actually sent the Earl of Leicester "to know the most suspicious day for her coronation," and afterwards bestowed upon the doctor a few proofs of her confidence and respect. In the year 1588, the mysteries of the Talmud and in the sacred annals of the Esotericism, Dee had long affirmed that it was possible for a man to enjoy personal communication with the angels, and to be able to "summon these kindly spirits at will." Dr. Dee's account of his first interview with the angel "Uriel," and his results, have been given with some accuracy by the author of the work before cited, and that we gladly avail ourselves of the passage:—

"By dint of continually brooding upon the subject, his [Dee's] imagination became so disordered, that he at last persuaded himself that an angel appeared to him and promised to be his friend and companion as long as he lived. He relates that one day in November, 1582, while he was engaged in fervent

prayer, the window of his museum looking towards the west suddenly glowed with a dazzling light, in the midst of which, in all his glory, stood the great angel Uriel. Awe and wonder rendered him speechless but the angel, smiling graciously upon him, gave him a crystal of a convex form, and told him that whenever he wished to hold converse with the beings of another sphere, he had only to gaze intently upon it, and they would appear in the crystal and reveal to him all the secrets of futurity. Thus saying, the angel disappeared. Dee found from experience that it was necessary that all the faculties of his soul should be concentrated upon it, otherwise the spirits did not appear. He also found that he could never recollect the conversations he had with the angels. He therefore determined to communicate the secret to another person who might converse with the spirits, while he (Dee) sat in another part of the room, and took down in writing the revelations which they made."

Edward Kelly, formerly an apothecary at Worcester, was the person selected by Dee for his confidant and assistant.

The "crystal globe," or "show-stone," as it is indifferently called by Dee, has after travelling about the considerable portion of Europe, and passing through various hands, at length found a permanent abode in the Department of Antiquities, British Museum, where the reader will find it snugly deposited in a glass case, through which fair spiritualists, we are told, are in the habit of gazing at it for hours at a time. Here is a representation of the "show-stone," diminished as to size. Its bulk is about that of a goose-egg.

In many books this stone is declared to be composed of "polished canal coal." In reality it is made of brown quartz. The name given by its adepts, once in the possession of Dr. Dee, and afterwards of Horace Walpole, is composed of obsidian, or volcanic glass.

We proceed to point out the most striking resemblances between the spiritualism of to-day and that of the sixteenth century, as also between the implements and mode of action employed by the spiritualists of each century. We have—

1. *The Magic Mirror and Crystal Globe.*—After what we have written it is needless to do more here than remind the reader of the magic mirrors in which certain of the leading spiritualists are represented as beholding such strange sights.

2. *The Spirit of Malina.*—Here Mr. Home, Mrs. Marshall, and others, have their counterparts in Dr. Dee and Edward Kelly.

3. *Knockings, Rappings, Vocal Sounds, &c.*—As regards those knockings, rattlings, crackings, vocal sounds, &c., in the supernatural nature of which so many estimable people have such unflinching faith, if we turn to the records of what took place in the "crystal globe," we shall find that the spirits conjured up by Dee are fully equal to producing the sounds produced by the spirits invoked by our modern mediums—may, far surpass them in variety and compass. First, we have the winds making themselves heard from the interior of the show-stone. Then Zephyr is whispering in softest murmurs. Anon rule Boreas holds forth with such tempestuous violence that you cannot help trembling for the fate of ships far out at sea. Their ceaseless murmur is presently you are startled by a terrible clattering and thumping, and other sounds which, in ordinary circumstances, would justify you in apprehending a tremendous breach of the peace. At other seasons you hear weeping and wailing, and roaring and shouting; and persons howling like dogs. Then you have sounds as of people who are reckoning money. After that a tremendous crash as of mountains falling, &c. &c. As to this point of noises, therefore, we are justified in contending that our modern spiritualists are beaten hollow by their English prototypes.

As for musical sounds, we find that those accordeons which figure so conspicuously at spiritual sittings, have their counterparts in certain angelic "pipes." Subjoined is an engraving of this instrument, taken from a sketch of the original by Dr. Dee, as it appeared to him in the show-stone, and which is now to be seen in the Sloane Collection of Manuscripts in the British Museum.

With the melody drawn forth by seven angelic performers from this curiously-shaped instrument, and six others of a similar make, the men of Dr. Dee and his assistants were regaled about an hour after midday on the 19th of November, 1582. The doctor gives us no idea as to the nature of the tunes with which he was favoured. We are informed, however, that these "pipes," or "anastases" as they are called, were occasionally from their artful labours. After such pauses, "they bobbed one another, and then played again."

4. *Romping Tables, Hollicking Chairs, &c.*—Now as to objects which are generally set down as inanimate. The searcher after coincidences will here be richly rewarded. For the chairs which truly, and the dining-tables which rear like wild horses in the spacious mansions of Belgium, he will meet in the show-stone with four-legged tables which have a trick of standing occasionally on two legs, and chairs which rise from the ground into the air and then vanish aloft. His organ of wonder will be still more strongly appealed to. He will meet with astonishing gold plates, which make up their own wings, and, like the angels who are called,—"and, with peripatetic pillars, which are changed eventually into vast and stormy seas." We place before the reader a sketch of one of the interesting and highly intelligent tables alluded to. It is taken from a cut in that very scarce book, "A True and Faithful Relation of what passed between J. Dee and some Spirits," &c. &c. published in 1659, and edited by Meric Casaubon, D.D.

Dr. Dee's "Crystall Globe" or "show-stone."

In the squares of this table certain letters and characters appeared.

"They," writes Dee, "by the true images of God his spiritual creatures." These letters and hieroglyphics, we learn, were copied on paper by Kelly.

5. *Spectral Hands, Arms, &c.*—As for those spectral hands and arms, which, appearing in darkened Occidental drawing-rooms, busy themselves in geranium-blossoms to the company, in turning over the leaves of books, or in removing books out of sight, we meet with phenomena quite as wonderful in the magic globe. In it spectral figures come into view, and spread themselves out so as to spell sentences by means of spectral letters attached, one to each finger; spectral hands, too, present themselves, and take the greatest possible liberties. Amongst other freaks, they snatch the book that he is writing in out of the hands of Dr. Dee. Nay, they even carry off the show-stone itself, but soon after return it to its place. Then there are spectral legs and spectral hands, and—but we feel that we need summe up more apparitions to prove our case.

6. *Medical Advice, Ghostly Counsel, a New Religious Revelation, &c.*—Here again we have resemblances of the most startling kind. In illustration of these we are presented just now, by a grant of space, from referring to more than the following example. In "Doctoree De Mysterium Libri Quinque" the Doctor addresses the spirit Murfi in behalf of a woman named Isabel Lister, "whom the wicked enemy hath soe afflicted with dangerous temptations, and hath brought her knives to destroy herself withall." Murfi at once prescribes the "Magic Lamin," of which we subjoin an engraving.

Here again we have resemblances of the most startling kind. In illustration of these we are presented just now, by a grant of space, from referring to more than the following example. In "Doctoree De Mysterium Libri Quinque" the Doctor addresses the spirit Murfi in behalf of a woman named Isabel Lister, "whom the wicked enemy hath soe afflicted with dangerous temptations, and hath brought her knives to destroy herself withall." Murfi at once prescribes the "Magic Lamin," of which we subjoin an engraving.

The Fore Part of the "Magic Lamin."

The Back Part of the "Magic Lamin."

This "Lamin," or plate, was of lead. The figures on it represent the letters which go to form certain names, including those of the spirit Murfi and the afflicted woman. We are not told to what spot the plate was to be applied. The directions are simply to "use it on the body molested."

But not only do we note such astonishing resemblances as we have indicated between the spiritualism of to-day and that of the sixteenth century; we note also that the parties into which the public are divided on this question, had their corresponding parties in Elizabeth's time. There, too, we find earnest disciples, who believe firmly that the "manifestations" are from God; and others who believe that they are the workings of evil spirits. And there also are the unbelievers, who laugh derisively at the whole affair, as juggle and imposture from beginning to end. Nay, the very terms of abuse which are now scattered about so lavishly—"conjurer," "impostor," "infidel," "atheist," "Sadducee," and so forth, bed about and bed service then. Truly there is little that is totally new under the sun, and the nineteenth is not in all things so far ahead of the sixteenth century, as in our overweening vanity we are in the habit of assesting.

NECROLOGY OF EMINENT PERSONS.

THE REV. DR. CROLY.

On Saturday, the 24th ult., from a sudden attack of disease of the heart, the Rev. George Croly, LL.D., for twenty-six years Rector of St. Stephen's, Walbrook. Dr. Croly was a native of Dublin, and was born about 1784. He received his early education at Trinity College, Dublin, where he graduated. He came to London in the beginning of the present century, and devoted himself, especially in early manhood, and more or less throughout his later life, to literary pursuits, chiefly in the department of dramatic poetry. His earliest attempt, we believe, was a satire entitled "The Times," which was published about 1810. His romance of "Salathiel," which is founded on the story of the Wandering Jew, is usually quoted as the best exemplification of his powers in that line. He also wrote a "Life of Edmund Burke," and was a frequent contributor to the periodical literature of his time, principally in the pages of Blackwood, in which he wrote at its first starting. He was also for some time editor of the *Universal Magazine*, and his name is well-known as the author of some of the ablest leading articles in the Britannica, in its palmy days of Toryism and Protectionism. Among his other voluminous writings we ought to mention his "Catalina," a tragedy; his "Pride shall have a Fall," a comedy; and also a volume on the Apocalypse; besides sundry sermons, tracts, and pamphlets on theological controversy, and the religious questions of the day. A selected edition of his poems was published by Messrs. Blackwood some years since.

Dr. Croly's first presentation was to Boddleigh, a parish on the skirts of Exmoor, in Devon; but on going there he was so dissatisfied with the place, on account of its wildness and desolation, that he never returned on his duties, and it was not until he was upwards of 50 years of age that he succeeded to the living of St. Stephen's, with which he was presented by Lord Lyndhurst, then Chancellor, it is said, on the urgent recommendation of Lord Brougham. Of necessity almost, from the position as actor of the century, he was identified with the protracted pious squabble in which Alderman Gibbs took so

memorable and conspicuous a part. Of late years his reputation as a literary man was, to a considerable extent, merged in that of a preacher, and numbers of strangers used to frequent the fine church of St. Stephen's to listen to his sermons, the last of which he delivered so recently as Sunday week. It may be remembered that one of Dr. Grey's sons, an officer in the East-India Company's service, of more than ordinary promise, fell gloriously in the campaign against the Sikhs about fourteen years ago.

THE DUKE OF NORFOLK.

On Sunday, the 25th ult., at Arundel Castle, Sussex, aged 45, after an illness of several weeks, from enlargement of the liver, his Grace the Duke of Norfolk. The deceased peer, the Most Noble Henry Granville Fitz-Alan Howard, 14th Duke of Norfolk, Premier Duke and Earl in the peerage of England, Earl of Arundel, Surrey, and Norfolk, and Baron Fitz-Alan, Clm, Oswaldston, and Malvern, Hertfordshire, Earl-Marshal and Chief Butler of England, was the eldest son of Henry Charles, 13th Duke of Norfolk, K.G., by the Lady Charlotte Leveson-Gower, eldest daughter of George Granville, Marquis of Stafford, who was eventually raised, in 1833, to the dukedom of Rutland, and died the same year. He was born in Great St. Martin's-street, London, on the 7th of November, 1815. Although a Roman Catholic by profession, he was sent to Eton, and passed thence to Trinity College, Cambridge, where he completed his education. He entered the army as cornet in the Royal Horse Guards, but retired soon after attaining the rank of captain, and entered parliament in the general election consequent on the death of the late King in July, 1837, as M.P. in the Liberal interest for the family borough of Arundel, which he represented without intermission (while bearing the courtesy titles of Lord Fitz-Alan and Earl of Arundel and Surrey) down to the year 1851, when, finding that his sentiments on the Ecclesiastical Titles Bill were not in accordance with those of the "patron" of the constituency, his father, the late duke—he accepted the Chiltern Hundreds, and was immediately returned by the electors of Limerick, Mr. John O'Connor being the Chiltern Hundreds in his favour. He retired from the House of Commons at the dissolution of 1852. The Earl of Arundel and Surrey succeeded to the honours and representation of the noble house of Howard on the death of his father, the late duke, on the 14th of February, 1856, the same year, when, finding that the dukedom of somewhat less than five years. The late duke was a magistrate for the counties of Middlesex and Sussex, and enjoyed the entire patronage of the College of Arms (better known to the public under the name of the Herald's College), and was of extensive living in the Strand Church, the late duke married in June, 1839, Augusta Mary Minna Catharine, second daughter of the late Admiral Lord Lyons, G.C.B., by whom, who survive him, he has left a family of two sons and six daughters, besides two children who died in infancy. The eldest son, Henry Fitz-Alan Howard, Earl of Arundel and Surrey, who succeeds his father, was born on the 27th of December, 1847, so that he is now on the eve of completing his thirteenth year. The duke also leaves two sisters, Lady Foley and Lady Adeline Mansers, and also a brother, Lord Edward Henry M.P. for Arundel, and a daughter, Lady Catherine, the wife of Hon. Thomas, who is married to Miss Augusta Talbot, cousin of the late Earl of Shrewsbury.

COLONEL TYNTE.

On Friday, the 23rd ult., at Hallowell House, Somerset, aged 82, Colonel Charles Kemys Tynnt, formerly M.P. for Bridgwater. The deceased gentleman, who was the head and representative of one of our most ancient county families, was the son of the late Colonel Tynnt, of the 1st Foot Guards, who was Groom of the Bedchamber to George IV. whilst Prince of Wales, and nephew and heir of the late Sir Charles Kemys Tynnt, formerly M.P. for Bridgwater. He was born in 1778, and was for some time in the army, and for many years Colonel Commandant of the West Somerset Yeomanry Cavalry. He sat in Parliament for Bridgwater in the Liberal interest from 1820 to 1827, when he retired from public life, and was a Deputy-Lieutenant for Somerset, Glamorgan, and Monmouth, in each of which counties he held large landed property, including some valuable church preferments. Whilst in Parliament he voted for the Reform Bill of 1832, and for Catholic Emancipation, but against the Ballot Bill. He was re-elected for Bridgwater in 1837, and was again returned in 1841, Lewis, Esq., of St. Pierre, co. Monmouth. He is succeeded in his large estates by his only son, Charles John Kemys Tynnt, Esq., M.P. for Bridgwater, Colonel of the Royal Glamorgan Militia, and Provincial Grand Master of the Freemasons in Monmouthshire, who was M.P. for West Somerset from 1852 to 1857. The late Colonel Tynnt was declared by the House of Lords, in 1816, a peer to the barony of Wharton, and he was also a coheritor to the barony of Grey de Wilton. The present Colonel Tynnt is well known in the world of letters as the author of a "Sketch of the History of the Revolution of 1830." He has been twice married, 1st, to Elizabeth, 3rd daughter and coheir of Thomas Swinerton, Esq., of Butterton Hall, co. Stafford, and secondly, to Vincenza, daughter of Wallop Brinsford, Esq., of Bath House, co. Lincoln, Ireland.

J. A. WARRE, ESQ.

On Sunday, the 18th ult., at West Cliff, near Ramsgate, aged 73, John Ashley Warre, Esq., M.P. for Ripon. His death was the result of a cold caught in returning from church at Ramsgate, on the previous Sunday. Mr. Warre, who was a magistrate and deputy-lieutenant for Kent, was born in 1787, and was educated at Harrow, and at Christchurch, Oxford. He entered Parliament in 1815, and represented Lord Russell's disaffectedshire, Taunton, and Hastings, in various Parliaments in the unreformed House of Commons, and he held a seat in the first reformed Parliament. He had not taken any public part in politics since the dissolution of December, 1834, until the last general election, when he was returned as M.P. for Ripon in the Liberal interest, in conjunction with Mr. Greenwood, the Conservative candidate, Mr. A. Richards, being "nowhere" at the close of the poll. The borough had previously returned a succession of Tory

members, but the accession of the present Earl de Grey to the Yorkshire property of his father, the late Earl of Ripon, turned the balance of the constituency the other way most decidedly. Mr. Warre married, in 1830, Caroline, daughter of the late Prince George, Earl, and daughter of the Duke of Gloucester, Esq., Dr. Fox, President by whom he left issue. His second son, Arthur, Esq., married in February last, to Laura Frances, eldest daughter of Edward J. Cooper, Esq., of Marckoe Castle, co. Sligo.

SIR E. McDONNELL.

On Friday, the 23rd ult., at his residence in Merrion-square, Dublin, aged 54, Sir Edward McDonnell. The deceased was a native of Dublin, and was born in 1806, and was for some years a Magistrate and Alderman, and ultimately (in 1854) Lord Mayor of Dublin. He was an extensive paper-manufacturer in Ireland, and was also connected with trade and commercial interests. He received the honour of knighthood, in 1849, from the Earl of Clarendon, then Lord-Lieutenant of Ireland, on the opening of the Great Western and Southern Railway of Ireland, of which company he was chairman. The following testimony is borne to his character by the deceased knight by the Dublin *Mercantile Advertiser*:—"Sir Edward was one of our most respected and useful citizens, and his loss will be deeply and generally regretted. He has been for several years the chairman of the Great Southern and Western Railway Company, and in that and other positions has rendered great service to the company and to the country." Sir Edward married, in 1832, Catharine, daughter of Sylvester Costigan, Esq.

WILLS AND BEQUESTS.

Jonathan Bullock, Esq., of Faulkbourne Hall, near Witham, Essex, and of 2, Brynmore-street, London, died on the 27th of November last, leaving as his will on the 3rd of December, 1859, appointing his wife and his son-in-law, the Rev. John F. Bullock, M.A., Rural Dean, Rector of Radwinter, Essex, the executors. The personalty was sworn under £12,000. This venerable gentleman, who reached the great age of 87, was the captain of the 1st Dragoon Guards, was a magistrate and deputy-lieutenant for Essex, and high sheriff for the county in 1837. His name was originally Watson, but his father succeeding to the estates of an uncle—Colonel Bullock, M.P. for Essex—he adopted, in the year 1800, the name of Bullock. The estate of the testator was divided into three children—giving each on the option of purchase; and from the proceeds thereof to pay certain annuities and charges to his four daughters, and the residue to his wife for her life, and, on her decease, to pay to his daughter Elizabeth Ann Bullock, the wife of his second son, the residue of the testator's personalty. The residue of his personalty he bequeathed to his wife. The testator particularly directs that the furniture, fixtures, paintings, and the household effects, together with his collection of curiosities, and specimens of natural history, are to be consigned to Sir Edward in the family, and not to be removed from the family domain of Faulkbourne Hall.

The Reverend Thomas Henry Heathcote, of M.A., Rural Dean, Vicar of Leek, Stafford, and Domestic Chaplain to the Earl of Macclesfield, died on his vicarage on the 16th of September last, leaving made his will on the 26th of June preceding, appointing his relict and four gentlemen executors, namely, W. Shuttleworth, Esq., Town Clerk of Liverpool, Colonel Harper, Francis Falkner, Esq., of Bath, and E. Harvey, Esq., of Liverpool. Probate of the will was taken out in the London Court on the 22nd of November, and the personalty was sworn under £25,000. This gentleman held the vicarage of Leek for the period of thirty-eight years, to which he was presented by the Earl of Macclesfield, to whom he was Domestic Chaplain, the value of the preferment is stated to be £170 per annum, to which is added a pastoral residence. He was twice married, but left no issue by either marriage. To his relict he leaves an annuity of £500, also an immediate legacy of £500, together with the furniture, plate, carriage, and other household effects. To his niece, Mary Ellen Bullock, an annuity of £40, and a legacy of £200. There are several legacies left to other members of his family. The residue of his estate, both real and personal, he has directed to be divided equally between seven of his nieces. All legacies, annuities, &c. are directed to be paid in full, and to be free of legacy-duty.

The Right Hon. Christophera Barones Downes, of Bort House, near Athy, Kildare, Binsted, Isle of Wight; and of 19, Grafton-street, Piccadilly; who died on the 18th of October last, aged 61, was the wife of General Lord Downes, Dnyases de Burgh, G.C.B., a representative peer of Ireland, and noble and gallant soldier, who was distinguished by the fact that he has received several foreign orders and distinctions under the late Duke of Wellington; viz. K.T.S. of Portugal, and K.A.S. of Russia. The Baroness possessed in her own right a power of disposition over her property amounting to £100,000, which she was frequently entirely amongst the members of her family by her first marriage with her late husband, John Willis Fleming, Esq., M.P. for Hants. Her ladyship has bequeathed to her daughter Christophera a variety of diamonds and other jewellery; and to her daughter Henrietta, wife of Colonel Vassall, of the Coldstream Guards, she leaves her library; and to her other children and to grandchildren there are several bequests of jewellery. The remainder of her property to her son Arthur, who is appointed residuary legatee, and is also an executor with his sister Christophera. Her ladyship's effects were sworn under £5,000.

General Thackeray, C.B., Colonel Commandant Royal Engineers, died on the 18th of August preceding, at the Cedars, Witleton, Surrey. His will, made on the 13th of August preceding, was proved by the Hon. John Jervis Carnegie, of Fair Oak, near Petersfield, one of the executors. The personalty was sworn under £8,000. The widow takes the whole of the property, both real and personal, for her life; and on her decease the general has directed that it shall be equally divided among his two sons and his four daughters. This gallant veteran, who attained the patriarchal age of 85, began his career as a subaltern in the Royal Engineers, and rose by progressive steps, and meritorious active military services, to the rank and honours he so well deserved.

Lady Fisher, the widow of the late Sir George Fisher, Bart., of Woolrich, died on Thursday, Kent, on the 27th of September last. She made her will on the 26th of June, 1859, appointing, as executors, W. F. Beadon, Esq., of Stratford-place, G. A. K. Homan, Esq., of Sojourners' Inn, Fleet-street, and H. W. Fisher,

comfortable mansions for those who had assisted him when he was a boy and in distress. He not only did not forget himself, but he would not allow others to treat him as if he had ever forgotten the meanness of his condition and the humility of his early life.

FAIRY LAND.*

THREE is a very interesting story connected with the compilation of this little book. The late Thomas Hood was a child, when the toils of the day were over, of sitting with his wife and children, and their meeting for them, according to the mood of the moment, some tale, or ballad, or history. The ballads, we may suppose, were either his own composition or recited from memory; the history, it is to be imagined, was some striking passage that he had met with in that day's reading; and the tales, most probably, most captivations suited to the capacity of the majority of his listeners. The tales so told by Thomas Hood "in the dim twilight, by the flickering fire," are unfortunately lost. All that can now be stated with respect to them is cautiously sketched in the following words:—

"Of most of these, alas! after so many years of change, the very faintest memories have faded, and the few we have preserved here are all that remain, being necessarily but imperfect copies."

The loss of fairy tales, as Thomas Hood actually told them to his own children, or as he could have composed and written them for the purpose of being told to, or read by children of others, is greatly to be deplored. A "fairy tale" is like a ballad? it must be either a genuine *source* of antiquity, or it must be the composition both of a true and of a great genius. The "fairy tale" like the "ballad," must speak with the voice of ages long since passed away. It must be either a genuine narrative told by one who believed in the potency of fairies, and the malignant powers of wizards, or it must be the creation of a Shakespearean mind that can breathe upon its own idea the substance of a reality, and impart to it facilities such as will win the attention and command the sympathies of the young, for whose amusement it is easily to be invented.

A ready rhyme-fancie it is easy to jot down lines in rude verse, like "The Battle of Otterburn," or "Sir Peveril's Epics," and a smart paragraph suppose he has only to sit down and he can throw off, with perfect ease, a child's "story-book," or a "fairy tale." But when other experience has been used, it almost universally proves to be a failure. The first will be found deficient in those qualities which are at the same time the charm and the strength of the ancient ballad. It will not be possible to apply to the modern imitation those words which are so descriptive of the characteristics of the genuine and the antique ballad—"The inconceivable, equally present in their force and their weakness, is the magic power which dissolves the most refined criticism, and thrills the nerves of strong and hard men." And so it is with "the fairy tale." Its *simplicity*, its quaintness, combined with its apparently effortless production of marvelous incidents, such as the old and true fairy tale develops, baffle the efforts of the modern imitator who is not gifted with genius of the first order. The imitation will not please either grown up men or boys, or women or children. It will sound upon the ear like a bad piece of music, rendered still more disagreeable by being played out of tune.

In this volume we have a well-told genuine old "fairy tale," and of a new or modern fairy tale that is spotted in the telling. The first is "The Grateful Animals," a Hungarian legend. The incidents in it are old—they are more than three thousand years—they may be found in many other stories—the tale itself is utterly improbable, and yet there is the ring of the genuine simile in every sentence. The other, "The Three Great Giants," was originally a fairy tale by Thomas Hood, but manifestly a most "imperfect version," for it is told in such a manner as to be incomprehensible to ninety out of every hundred children in whose hands it might be put. It is full of wit, humor, and irony; but the wit will not be appreciated, nor the humor relished, by those for whom it was composed, whilst as to the fancy displayed, a child will not be astonished by it, although he will probably, with that shrewdness to be found in many children, inquire for what purpose it was exhibited.

There are, however, many things in the volume with which children will be greatly pleased. There are pretty rhymes, and more than one good story; but those that will, we expect, be the most popular, are the verses and stories, published as the composition, of Jane Hood. For the sake of the living and the dead we shall rejoice to hear that "Fairy Land" has found many purchasers during the Christmas holidays.

SCARTH ON THE CHINESE.

MR. JOHN SCARTH has been twelve years in China, and having made a good deal with the people, claims to be an authority on questions concerning them. His two works, particularly the second, treat of political questions; but we refer only to that part of them which concerns the manners of the Chinese. This people are the most interesting amongst the nations of the earth for a continuous and almost undisturbed existence. From the beginning of their annals, so remote at least as those of any other people ever known, they have enjoyed great prosperity with few vicissitudes. They are said to have no history, from having suffered few changes. Their existence far surpassing that of any other people, they seem now, from an insurrection having its basis in religion, and from coming into conflict with the governments of Europe, likely to break to pieces and supply the elements of some new political combinations. Neither of these things can we easily imagine, but some new condition will ensue. We have no inclination to follow Mr. Scarth into the mysteries of the triplets and his relation to Christianity, about which there are many differences of opinion, we confine ourselves to the more secular effect illustrated by this example, that religion has at all times had much to do with the changes in the world. It does not itself remain unchanged, its first form is nominal, and its practice, but substantially, like everything earthly, is in continually undergoing changes, if they are silent, and at the time unobserved. Westminster Abbey has stood for many ages; but the religion in which it has been devoted was different, under the Plantagenets, the Tudors, the Georges, and the Victorias, from what it now is. Within a very short period it has undergone, and is now undergoing, great changes, and it seems only where this inevitable law of change is attempted to be controverted, as in Rome and in China, that serious disturbances ensue. Our petty assemblies, at St. Omer in the East, under one name to improve, contracted with the violence going on in Italy and China illustrated.

* *Fairy Land*, or, Recreation for the Young Generation. By the late Thomas and Jane Hood, formerly of St. Paul's Churchyard. 1861.

† Twelve Years in China. By a Gentleman. Edinburgh: Edmonstone & Douglas. British People in China. In our War with the Tartars of the Chinese? By John Scarth, author of "Twelve Years in China." London: Smith, Elder, & Co.

One of the most remarkable features in the Chinese character, and which is at once the basis of the stability of their empire and of their continual growth, is the great respect they have ever shown for industry, the means by which life is sustained. Throughout Europe, for the early ages, as we know, the renowned empires of antiquity, industry or labour was performed by slaves, and, till very modern times, was connected with ideas of disgrace and ignominy. To trade, was peddling; to toil, slavery. In China, the Emperor has ever been proud to hold the plough, and yearly sends the commands to his people, of honoring that first grade of mechanical labor. The Government has also been careful to encourage and impress on all the people the same sentiment. In Greece, Rome, and medieval Europe, in Egypt too, and probably in Persia and Assyria, and especially in India, war was more honored than the industry practised by a degraded class of slaves, the key to the continued prosperity of the empire continued increase of the Chinese. They appear to have recognized from the first the great natural law, that man must eat bread by the sweat of his brow. Their soil is fertile, but they long ago discovered and acted on the great principle, that labour is the source of all wealth. They were rewarded by ages of domestic prosperity.

It might be inferred from this leading fact, if we did not know it from the meagre annals of the Chinese which we possess, that though their Government has been corrupted, they and their country have never been reduced to personal slavery. They grew in domestic peace to be a more numerous and more homogeneous people than any other known. Other great states fought their way into power, and by their own warlike passions and the similar passions of their neighbours, were destroyed. They fell victims to each other in turn, and were all in time reduced to desolation. The history of China is a moral lesson on a grand scale. The nation has flourished continuously, from avoiding war and its consequences—slavery. Labour has been free, and in the interior of China trade seems to have been free.

Their present condition reflects light on their past condition. They are at once amazingly numerous and amazingly industrious. They do not possess the peculiar skill of Europeans, but they have great skill of their own. For ages they have been successful navigators and successful agriculturists, and the powers of the magnet and turned it to use before it was discovered in Europe. Ages ago they built their vessels in water-tight compartments, one of our boasted modern improvements. Before canals were made in Europe they had constructed one more than that which alone has been the cause of the great increase of their power. They invented and used paper money long before it was known in Europe, where to this day, neither governments nor people are acquainted with the laws which govern it, nor are they, except in a few instances, familiar with its use. They have been for centuries acquainted with many explosive substances, including gunpowder. They are excellent agriculturists, florists, and fashers, and in all the useful arts might give lessons to most Europeans. Their agriculture is not, perhaps, equal to our own; they do not yet use much machinery—but ours is only lately improved; and if we except Lombardy and Tuscany, all the best modern agriculture in the northern part of France, and some portions of Germany, the agriculture generally of China, though carried on by few instruments, is far superior to the agriculture of the greater part of Europe. Compared with that of Hungary or Poland it is in perfection. Our most horticultural countries, such as the Netherlands, are not so richly and so tastefully adorned with the flowers cultivated by the Chinese. Their industry has not, in fact, been confined to procuring subsistence; it has extended to adorning their lives. It pervades their whole existence. At an early period they acted on the chief principle of political economy, and made the most judicious use of their having discovered, and carried further than any other people. Nay there are even amongst many clever men, who darken knowledge by words, and still preach that there is something superior to labour and its free development, and more generous to man's capacities.

They have followed nature, too, in being prodigal of life. She produces it and destroys it so plentifully, that those who have no other light but hers are likely to be careless of it too. To torture criminals and others was common throughout the Pacific Islands, and the Tartar countries contrary to the laws of nature, but the Chinese do not appear, though regardless of life, to be prone to inflict torture. They are a mixture of cowardice and fortitude; they succumb to an accident like the fall of a mast, and give themselves up to death, while in battle they will blow up the vessel rather than be taken. Like other civilized people they think disgrace worse than death, and say with the German poet, "The highest good of life is not life itself." To get a favourable idea of the Chinese, such as we have outlined from Mr. Scarth's book, it should be read.

GOLD VEINS AND GOLD DEPOSITS.*

THE discovery of gold in Australia was an epoch vitally important to the various colonies of that continent, not only because of the value of the gold itself, but perhaps even more than that, because its discovery caused rapid immigration. Whether, therefore, it be looked on in the light of the vast mineral wealth following in its train, or as so large an addition to the means of the means of commerce in civilized countries, there can be no doubt that Mr. Hargraves, the reputed discoverer, deserved well of his country; and his companion, Mr. Davidson, may, with great propriety and justice, claim a hearing. The latter gentleman, however, has not been able to make a satisfactory statement of his theory.

We desire, in perfect fairness and good feeling, to consider both these. The grievance seems to be, that Mr. Hargraves, whom he had accompanied to California previous to 1851, with whom he had frequent conversation concerning the gold mines, and who he had communicated his impressions that gold must exist in certain parts of Australia, did not give to his friend and associate, the author of this volume, a fair and sufficient share of the credit he himself obtained in the various colonies for the good work he had initiated.

The credit due to discoverers like that of Mr. Hargraves and Mr. Davidson, must, we believe, always be estimated by the result. It is certain that gold had been found in the rivers of California, when that country was first discovered by the Spaniards. A convict, in Australia, as long ago as in 1798 or 1799, is said to have found a gold mine, but he had found a gold mine, but the man was flogged because he could not verify his statement, in other words, because he was unsuccessful in prospecting. In 1811, the Rev. Mr. Clarke, a resident clergyman and a highly intelligent and instructed geologist of the old school, secondarily of the new, and a man of great energy, and of great enterprise, the fact should be kept secret. The difference was, that Mr. Hargraves not only discovered gold, but that, as a direct consequence of his discovery, others followed on the investigation, so that large and rich deposits were found, and a completely new life given to the Australian colonies, more immigration taking place, and

* The Discovery and Location of Gold Deposits in Australia, with comparisons and accounts of the gold fields in California, Russia, India, Brazil, &c.; including a philosophical description of the origin of gold in Placer-deposits and Quartz-creeks. By Thomas Davidson, 1 vol. 8vo. London: Longmans. 1860.

greater commercial movement being induced in a year, than had before occurred in twenty. It may be said that Mr. Davison was better informed, and better able to lead discovery than Mr. Hargraves, but it is certain that the latter was the one who did it, and he alone must have the credit. Nothing can be more simple than the account given of himself by Mr. Hargraves, and quoted in Mr. Davison's book, and with the extract we must dismiss the subject of his private life. He immediately tested by geological appearances, gold must exist in Australia as well as in California, it acted on that persuasion, and at the very first trial discovered the existence of gold where it had been supposed to be. He was the first to discover gold in Australia, and he immediately communicated the discovery to the Colonial Government and the public generally, the immediate result of which was the opening out and working of mines of enormous productiveness in various parts of the country."—p. 267.

Mr. Davison is at issue with established authorities both at home and abroad in his view of the origin of gold in what are called placer-deposits. Such deposits are by far the most abundant sources of gold in most of the larger and richer gold districts, and to them we owe at least nine-tenths of the vast supplies of the last twelve years. They consist of stones, often angular and sometimes rounded, of various sizes, irregularly mixed with mud, clay, and sand, and often two, three, or more such rough beds, all containing gold, are found, one lying over another. Under all other circumstances no doubt Mr. Davison would agree that these are local drifts, resembling what in England is called *builder clay*; and we have the authority of some of the geologists sent out to survey these districts that they are just such beds, and that they belong to various geological periods. They are clearly due to the action of water flowing over the surface. In all places the same general character prevails, and the gold is very irregularly deposited; some of it in very small detached grains and scales, some in moderate-sized lumps up to the size of a pea, and some occupying the whole of the surface. Occasionally huge masses of the precious metal are found scarcely more than spotted with rock and earthy impurities.* No wonder that the fortunate finders of such tangible wealth are tempted occasionally to speculate that no common or familiar natural cause can have produced so much gold.

Mr. Davison's theory shall be stated in his own words:—“Alluvial or placer-deposit gold has been distributed and deposited horizontally by means of an igneous liquid or perissable lava, and that quartz veins, as well as some other veins traversing districts, and some veins of quartz, and some veins of copper, supported by a series of propositions, which may be thus briefly stated:—(1) The gold in nuggets is ragged and angular; (2) it is found in positions where no merely mechanical force could have placed it; (3) it is found in existing water-courses which have undergone little change since the deposit of the gold; (4) it is found near ancient volcanic (?) disturbances, e.g., where, schists, and granites (these being the constants above alluded to); and (5) it is found in quartz, and quartz veins are due to matter in a fluid or vaporous state (1).”

We believe that most of these propositions confirm the more recognised geological view of the origin of placers. The gold has been formed in crevices in the altered rocks (not volcanic in any case, nor strictly heat-formed of certain localities, just as under other circumstances, ore of lead, copper, silver, tin, and other metals have been formed, but gold, not being ductile, and not readily combined with oxygen or sulphur as ordinary, or even high temperature, is deposited, or separated out, in a state either pure or alloyed only with other metals. Formed in this way, the veins or rocks containing it have been subject to the action of water, and have been worn away; but the gold, being much heavier than any other mineral, has been left behind, or carried to some new position, and is carried far. Collected in hollows, the larger fragments at the bottom, with more or less stone adhering to them, are often preserved unaltered, being soon covered up; but very much is broken into smaller particles or carried to some new position in the washing-bowl. Like all metals, gold has certain minerals with which it is generally mixed, and quartz, with some particular kinds of slate (those containing magnesia), are its common associates. Mr. Davison is evidently an intelligent and instructed gold-digger, and we can recommend his personal narrative as pleasant and useful reading; but we think the remaining part of his volume might with advantage have been left unpublished.

EVIDENCES OF CHRISTIANITY.†

This first edition of this work was issued for private circulation. It is now— in its second edition—placed before the public, for the first time, with a view to its general circulation. It is the work, not of a clergyman, but a layman, and, avoiding all discussion upon doctrinal points, it aims at showing the credibility of Christianity independent of the Bible. It seeks for the evidence of Christianity, not within, but outside the pale of Christianity itself. The apostle Julian is summoned as a witness—the Jew Josephus is forced to give his testimony, and avowed Pagans, such as Suetonius, Tacitus, Pliny, and Celsus, are made to prove the truth of that which they were either ignorant, or when submitted to them incapable of comprehending.

Such, in brief, is the aim of this little book. It is a popular treatise on a most important subject. It is a religious book, without the slightest taint of sectarianism; and therefore can be read, not only without offence but with advantage, by all persons, of all creeds, and we may add, of all ages.

TEMPLE BAR—A LONDON MAGAZINE.—No. 1.

The publication of the first number of the *Temple Bar* magazine, is an event in periodical literature. The price is one shilling, for which small volume is given 144 octavo pages, and no *Temple Bar* owes its claims to be the cheapest of all the monthly publications. There is an abundance of material; but as all-important question in these days of economisation and sharp criticism is this: what is the quality of the material? Is it good, indifferent, or bad? Such is the main consideration with purchasers, for the purpose of adding them in arriving at a just conclusion, it is necessary to take a glance at the principal articles of which the first number is composed.

The *Temple Bar* wisely assigns any grave dissertation for its opening article. The poet of honour, who has been given to the world, is a venture for public favour, is judiciously given to a tale, entitled, “For Better, For Worse.” The reader's sympathies are awakened by being placed, at once, in the society of a noble-hearted brother and sister, who are consulting together how they may best be able to sustain and help on in the world, the children of their father by a

* In 1867 a nugget was found, about 120 miles from Melbourne, measuring 1½ feet 4 inches in length and 1½ inches in width at the ends, and weighing 1½ lbs. It was the largest and richest yet known. It was found at Ballarat, in June 1868.

† An Introduction to the Evidences of Christianity. By J. O. Halliwell, Esq., F.R.S. Second edition. London: Longman, Green, Longman, & Roberts, 1860.

second marriage. The characters are drawn by a master hand; and then there is the beginning of a fine domestic story, with which the heroic brother and sister are but remotely connected; and so ends, in the first number, the fourth chapter of what is called “a romance,” but will inevitably turn out to be a novel of the present day—so well told as to secure, by itself alone, eager readers of *Temple Bar* for many months to come. The second article is a review of Mr. Hephworth Dixon's vindication of the character of Lord Bacon, and the following sentence will show that the reviewer coincides in the sentiments of the author upon whose work he is commenting:—

“To discover with patience and much toil the true history and worth of great men who are so many, is a more difficult and more important task than the history of a mighty nation reader must acceptably there thanksgiving to those fathers who were in the old time before them, and from whom they have inherited wisdom and strength.”

This is quite true; but then it sometimes happens that the vindicator of a great, or, it may be, only a very good man's memory, excites anxiety against himself, by the controversy which he provokes; and in such cases but little justice and scant mercy are meted out to him. This has happened before now, even in matters in which Mr. Hephworth Dixon has taken a part. “A word to the wise is enough.” The third prose article, “The Father of French Press,” is a lively bit of writing, not made up in a manner much to be approved of; for all its facts respecting Theophile Renaudot are taken from an authority to which the slightest possible reference is made—namely, Eugène Hatin's lately published “Political and Literary History of the French Press.” The fourth article is by Mr. John Greenleaf, on “the Kalevala, the long epic, which is to the mythology and traditional lore of the Finns what the *Iliad* and *Odyssey* of Homer are to the heroic story of ancient Greece.” The paper is learned—very learned—a capital article for a quarterly review, but so heavy for a monthly magazine, that it is almost enough to swamp the periodical in which it appears. The fifth article, “Gold and Drama,” is in itself a literary “sugar” for there is to be found in it, both the rich material of a good story and, intermingled with the pure ore, so small share of earthy and comparatively worthless matter. The selection of the tale composed perfectly with the title. And now we come to the great feature of the *Temple Bar* magazine, the contribution of its editor. The position of George Augustus Sala as a popular writer is established. His powers are recognised; and it is sufficient to say that the first number in the County of Middlesex is worthy of his reputation. It abounds in original thought, in shrewd observations, in quaint fancies, in pleasant jokes, and, occasionally, in the expression of sound thoughts, conveyed in pure and epigrammatic English. “Notes on Circumstantial Evidence,” “Criminal Lunacy,” “The Rev. J. C. Ball's ‘Over the Leaburn to Balliol,’” are severally excellent and readable papers.

ITHURIEL.

THURIEL the wide world he goes,
Surrounded but by few,
And sees each ancient falsehood where it lives;
He strikes them with his spear,
And, lo! in daylight clear,
They bring full-armed, and struggle for their lives.
He call on kings and laws
To their sacred oaths and vows,
On Church with its anathemas to ban—
For duels and for stakes,
Or wheel, his limbs to break,—
A mournful fate is his—Ithuriel!—yet a man!

No costly monsters hid
In grove or pyramid,
Though robed as angels to deceive his eyes,
Can hide them from his glance,
Or puncture of the lance,
With which he strips them of their false disguise.
Sad hero! must malign'd
And wronged of human kind,
Because he scorns the falsehoods we revere,
Why should he earn their hate?
The world's a Fane of Fate,
And Fate must reap the corn. Ithuriel! break thy spear!

COMPOSITE BLOCKS FOR PAVEMENT.—A patent has been taken out recently for what are called “patent composite blocks.” The novelty of the invention consists in the combination together of both wood and stone; and the cement by which both materials are thus united together is described as being impervious to water; whilst the materials themselves are rendered less liable to abrasion by ordinary traffic. It is notorious to all persons living in London, that wood and stone pavements are liable to two great objections—the wood in wet weather being dangerous to horses, and the stone causing great annoyance from the incessant noise of carriages rolling over granite blocks. It is supposed that a combination of wood and stone—such as has been effected in the construction of the “composite blocks”—will present these three advantages—cleanliness, safety to horses, and comparative freedom from noise. An experiment has been already made with the “composite blocks.” Three years ago a specimen was laid down at the Hibernian end of Little Queen-street, the great thoroughfare from Holborn to Covent Garden. This specimen has been examined by Mr. Braidwaite, a civil engineer, and Mr. Treboarne, surveyor to the Board of Works in the district, and both express the opinion, that having withstood the traffic to which it was exposed for thirty-three months without requiring repair, its general adoption would be advantageous to the public. The persons who have taken out a patent for the “composite blocks” are endeavouring to establish a company, and to induce the public to give them that support which they require, they maintain that the “composite blocks” are “not only better than granite blocks, or broken granite, on the Macadam principle, but that they also can be manufactured at much less expense.”

Just Published, imperial 4to., half-morocco, gilt edges, price 5s. 5s., with Index of nearly 130,000 Names, THE IMPERIAL ATLAS OF MODERN GEOGRAPHY;

A Series of One Hundred carefully Coloured Maps, embracing the most Recent Discoveries,
and the Latest Divisions of Territory in all parts of the World.

COMPILED FROM THE MOST AUTHENTIC SOURCES, UNDER THE SUPERVISION OF
W. G. BLACKIE, PH.D., F.R.G.S.

WITH AN INDEX OF NEARLY 130,000 NAMES, THE MOST COPIOUS EVER PUBLISHED.

"This fine series of accurate and beautiful maps,"—*Daily News*.
"A highly satisfactory publication."—"The Maps are everything that could be wished, so far as accuracy, distinctness, neatness, and fulness of detail are concerned."—*Advertiser*.
"One of the largest and most complete Atlases ever attempted."—*Critic*.
"Prettier maps than those of the Imperial Atlas are not often to be seen."—*Examiner*.
"After a careful perusal of the whole work, we can safely say that we know of no Atlas published at the same low price, which is so accurate and accurate in detail, and so well engraved; that the Maps have been laboriously constructed on scales as carefully adapted to the relative importance of countries, as viewed from the stand-point of English merchants and general readers; and that the Index attached to the engraved sheets is the most accurate and perfect which has yet been compiled."—*London Review*.

Two Vols. imp. 8vo., 2,670 pages, in 21. 6s.

THE IMPERIAL GAZETTEER.
A General Dictionary of GEOGRAPHY, Physical, Political, Statistical, and Descriptive.

Edited by W. G. BLACKIE, PH.D., F.R.G.S.
With above 700 Illustrations, Plans, Customs, Maps, &c.

"All the articles that we have examined—whether long or short—have exhibited a greater degree of correctness in minute details than we should have thought practicable in so comprehensive a work."—*Advertiser*.

"By far the best Gazetteer in our language."—*Critic*.

BLACKIE & SON, Warwick-square, City; and all Booksellers.

PRICE ONE SHILLING.

MACMILLAN'S MAGAZINE.

EDITED BY DAVID MARSON.

No. XIV., for DECEMBER, 1860, was published on Tuesday last.

CONTENTS.

- I. A Popular Exposition of Darwin on the Origin of Species. By Henry Faucett.
- II. Tom Brown at Oxford. Chaps. XXXIII. and XXXIV. By the Author of "Tom Brown's School Days."
- III. The Lost Expedition. By Thomas Hood.
- IV. The English Evangelical Clergy.
- V. Poetry, Prose, and Mr. Patmore. By Richard Garnett.

Volumes I. and II. are now published, handsomely bound in cloth, price 7s. 6d. each.

MACMILLAN & CO., Cambridge; and 29, Henrietta-street, Covent-garden, London.

SOLD BY ALL BOOKSELLERS, NEWSPAPERS, AND AT ALL THE RAILWAY STATIONS.

THE NATIONAL MAGAZINE;

ONE OF THE MOST POPULAR AND HIGHLY-ILLUSTRATED PERIODICALS OF THE DAY,

IS PUBLISHED ON THE FIRST OF EACH MONTH, PRICE ONE SHILLING.

The Half-Yearly Volume, handsomely bound, Gilt, price 7s. 6d., is now ready.

OPINIONS OF THE PRESS.

"On the whole, we consider it (the 'National') one of the best of our popular magazines. It bears genuinely, but powerfully, against the many evil that infect our age, such as profligacy in literature, sect in religion, and socialism in society. It only requires to be generally known to be generally valued."—*Standard* for June.

"The 'National Magazine' gives evidence of the vigour and taste of the new arrangement."—*Daily Telegraph*.

"The 'National Magazine' contains some of the best, and is certainly improving under the editorship of Mr. Elmhurst."—*Bel's Weekly Messenger*.

"It is understood that the proprietors and management of this magazine have been changed, and that the responsibility of both have been combined in a single person. There are few men in the literary world who are so well qualified for the conduct of a periodical, and if we had not been informed of the fact, we think we should have seen in the tone of the late number of the 'National Magazine' itself strong traces of a new and vigorous hand. The magazine has been given to the literary department; and, while illustration is still a chaste trifle, the picture is more predominant than hitherto. As there are pit and mistakes in the articles, we

are not disposed to complain of this partial change; and it is simple justice to say that quantity, quality, and variety are incidentally and satisfactorily combined in the current number."—*Illustrated London News*.

"We congratulate the new editor of this popular publication on the confidence of the first number that has appeared under his auspices. There is a gentleness of tone, a versatility of talent, and a softness of moral sentiment pervading every page which we cannot but approve. The articles are light, without being trifling; and the illustrations are good, without being trivial. The fiction is of a superior order to that which portends to be the province of this class of papers, and is written with eyes on a more thoroughly understanding magazine than the 'National' for a long time."—*Evening Times*.

"The 'National Magazine' for January is a great improvement upon its immediate predecessors. Both in the style of its engravings and the quality of the letterpress. Mr. Elmhurst has done much for it."—*Standard*.

"We think that the plan of this periodical, and the general character of the contributions, are and are perceived that it has only to be introduced to secure for itself a repeated welcome from thousands of householders."—*The Daily News*.
"This admirable periodical."—*Morning Chronicle*.
"This most agreeable periodical."—*London Review*.

[PRICE 3d.]

MASTERLY INACTIVITY.

SOME years ago it was asserted in Washington, by a popular Senator of the United States that it would be a happy thing for America and England if South Carolina and Ireland could be firmly linked together, tugged out into the middle of the Atlantic, and there scuttled. But the senator was wrong to complain, for South Carolina and Ireland are, doubtless, wise dispensations of Providence, and allowed to exist and to be troublesome for some beneficent purposes unknown to statesmen. Possibly the United States might wax too powerful and too proud, and become too dangerous to the rest of the world, if it were not for negro slavery and South Carolina. Great Britain also, like any very rich and over-powerful individual in private life, requires a drop of bitterness in the full cup of her prosperity, to warn her that she is but mortal at the best, and to teach her becoming humility. Perhaps she has more than one such drop in her cup, but if there be only one, that one is Ireland.

At the present moment a knot of persons in both of these regions are exhibiting themselves before the world, and discharging the recognised and possibly wholesome functions allotted to them, of stirring up the muddy pool of politics, and troubling the sleep of sensitive and quiet people by angry and minatory clamours. South Carolina, a poor, small, and but half-civilized state, threatens to secede from the great American confederacy; and Ireland, if she be represented by the person styled "The O'Donoghue," threatens, in a similar manner, to throw off her allegiance to the British Government, and to live independently of the tyrant *Sausmarch*. But the South Carolinians, foolish as they may be, are in one respect entitled to greater deference than the Irish under Mr. O'Donoghue. They are really alarmed and thoroughly in earnest, whereas the Irish cry is a shout from beginning to end,—as were a quart of ungovernable animal spirits and innate love of a row for a row's sake, as any whoop of defiance in a shebeen shop, or any flourishing of a shillelagh that ever cracked a skull at Donnybrook fair.

Every one knows the policy that will be pursued by the British Government in the case of the Irish malcontents—the great and wise policy of "LAISSEZ FAIRE." The Irish Roman Catholics do not know that they enjoy freedom, and are, consequently, not thankful for the blessing. All that can be done with them, or for them, is to let them talk till they become the world's laughing-stock, as they assuredly will be, if no one interferes with them. They prate about "nationality" as if there were any such thing in Europe as an unmixt nationality except that of the Jews, and as if nationality were in itself a cry that would or ought to rouse any nation to revolt, irrespective of grievous oppression, or denial of personal rights and civil and religious liberty. Their acts, too, are as senseless as their words. With fine phrases of liberty, independence, and nationality in their mouths, they despatch a thousand necessary poor wretches to aid the Pope and the Cardinals in depriving the Italians of Central Italy of every right of self-government. The Liberty that Irish patriots enjoy without knowing it, is not to be enjoyed by Italians of the Legations. Independence is declared to be a good thing for the people of Dublin, but not for those of Rome; while nationality, with "MacMahon, Roi d'Irlande," is in the estimation of all the O'Donoghues (for we suppose there must be more than one of the name), a proper thing on the western shores of St. George's Channel, but an improper thing between the Mediterranean and the Adriatic, with "Victor Emmanuel, King of Italy."

An agitation likely to be formidable to any Government must have some common sense and reason in it, and must be founded on a tangible grievance. But as Mr. O'Donoghue, and the silly people who support him, have no grievance, unless it be in the fact that they cannot destroy the Protestant Church; and as they exhibit as little wit as wisdom in the statement of their case, all that can be done with them is to let them alone. They prove, alike by the madness of their antics and their immunity from molestation, the strength of the Government under which they live, and the completeness of the liberty which they enjoy. A weak or tyrannical Government would have done the late Daniel O'Connell the honour of political martyrdom. It would certainly not have granted its contemptuous pardon to poor Mr. Smith O'Brien; and would just as certainly lay violent hands upon Mr. O'Donoghue of the Glen, or any other as outrageous a patriot.

The Federal Government of the United States will have a more difficult game to play with the discontented slave-owners of South Carolina, and of other States which may be inclined to join in the movement for secession. It must not be forgotten that the people of Charleston, even in the quietest times, live in a state of chronic alarm; and heads of families in that city, and elsewhere farther south, habitually sleep with revolvers under their pillows, to be prepared to defend themselves in what they consider the not improbable case of a rising of the slave population. All these alarms, the growth of their own pet institution, have been exasperated and intensified by the election of Mr. Lincoln to the Presidency—unbattered, moreover, by the approaching loss of that political ascendancy which the pro-slavery Democrats have so long enjoyed and misused.

But as time wears on, and long before Mr. Buchanan shall have finally vacated the White House, and disrobed himself of the uneasy splendours that attend its occupancy, the Carolinians and all the states that now rave and bluster about the establishment of a Southern Confederacy, will have discovered, to the great tranquillization of their minds, that Mr. Lincoln is not so very black a Republican as he has been painted, and that a rising of the Slaves is nothing more than the discomfited dream of their own consciences, and if attempted, would be put down by the North as vigorously as by the South. Mr. Buchanan is no greater friend of the stability of the Union than Mr. Lincoln, and Mr. Lincoln is no less its friend than Mr. Buchanan; and neither of those men will do anything to imperil the glorious fabric;—glorious in spite of slavery, and destined, there can be little doubt, to last for ages after negro slavery shall have become as much a tradition of past times as the feudal system of Great Britain. It is natural that the South should feel alarmed; it is not unnatural, under the circumstances, that it should talk of Disunion; but it will be most unnatural and most pernicious to the whole Confederation, but most seriously so to the South, if the talk should assume the form of action.

Mr. Buchanan's policy while in office, and Mr. Lincoln's policy, when he, in his turn, shall seat himself in the Presidential chair, will be alike the policy of "masterly inactivity." Far better to let Charleston, Mobile, and New Orleans sulk or talk sedition for a while, than to treat their discontent and terror as if they were crimes against the state, and invoke the power of the Federal law and authority against them. As in the case of Great Britain against the Irish repealers and disunionists, the wisest course is

the easiest; and it would be as cruel in a strong man to deny a weak woman the use of her tears or her tongue, or the relief of a hysterical fit, when fate, fortune, and circumstance go against her, as it would be in the strong North and West to deny the feeble and impatient South the necessary relief of angry words and bitter recriminations in so sad a reverse of political fortune. The fit of passion will subside if the Federal Government will simply trust to time, and do nothing; and the South, agreeably surprised a few months hence at finding all its alarms to be groundless, will fight with tongue and pen for the integrity of the Union as vehemently as it now attempts to assail it. LAISSEZ-FAIRE will save the Union, and the wisest men of both parties are quite aware of the fact.

THE NEW FRENCH TREATY.

THE commercial treaty with France was concluded, after eleven months' arduous and continued negotiations, on the 30th ult., and published in the *London Gazette* on the 1st inst. With its principal features the public are already acquainted. It enables the French to obtain our coal, iron, and machinery at an easy rate; and it enables them to send lighter wine at a very low rate of duty, and silks, millinery, fruits, &c., free of all duty. The latter part of the treaty now completed consists of the many regulations which the French Government has made for imposing duties on our manufactures when imported. None of them are above 30 per cent. *ad valorem*, and the majority of them are 15 per cent., and several only 10. Many are specific duties framed on these bases, the exact relation of which to the value of the articles, can only be estimated by our manufacturers themselves. In general they are well suited with the rates; and as these are either a great reduction of former rates, or in many cases the substitution of rates lower than in most other countries for previous prohibitions, this result of the treaty is to place the trade of the two countries on a comparatively free footing.

All such treaties are to be considered under two aspects—one in relation to perfectly free trade, the other in relation to much-restricted trade. It is now well known and generally acknowledged, that there is no essential difference between the trade carried on among the inhabitants of the same political community—such as that of Great Britain and Ireland, and that carried on between them and the inhabitants of another political community, such as France. Industry is everywhere subject to the same laws, and all exchange everywhere depends on division of labour, on individual, territorial, and climatic peculiarities, which are common to the whole family of man. The very same circumstances which lead to the exchange of Berkshire cattle for Norfolk barley, lead to the exchange of English coal for French wine. Exchange, in truth, is natural to human society, and it is equally natural that it should be perfectly free, or carried on without any impediment from political or fiscal regulations. Under this aspect every commercial treaty, which, if it lessen or remove many restrictions, necessarily impairs some, is condemned by some writers and some thinkers. On this ground chiefly, but also because the treaty compels us to substitute direct for indirect taxation, Mr. McCulloch and others condemn it. It really imposes many restrictions on natural freedom. It hampers us by binding us to the regulations of France, and a dim view of this principle has induced several persons, who are not free-traders, to censure the treaty.

The treaty must, however, be considered in relation to the much-restricted trade for which it is substituted, not in relation to perfectly free-trade, which has not hitherto been permitted between political communities. Under this aspect, when the wines and silks of France were burdened with heavy duties in England, and when the cutlery and cotton and earthenware of England were burdened with heavy duties in France, or totally prohibited, a commercial treaty which reciprocally lowers these duties, or abolishes these prohibitions is mutually extremely advantageous.

Under the former aspect, all the equivalent duties which diplomats have devised, are only sorrowful means of lessening the advantages which are conferred by nature on all mankind, by giving them in different places different means of production. They are all restrictions and adverse to free-trade. The diplomatists who have taken a great deal of pains to adjust the multifarious duties, and reconcile the rival claims of the manufacturers in both countries, have only troubled themselves to inflict mischief on their mutual trade. Under the latter aspect these great labours and these multifarious and really vexatious regulations are the only means by which a better system can be introduced; and the negotiators deserve all the praise bestowed on them. The time will probably come, though it yet seems far off, when the interchange between Manchester and Bordeaux shall be as unembarrassed by fiscal restrictions as the interchange between Glasgow and London; and till then we must be thankful for every diminution of restrictions now known to be merely inimical to social welfare.

It is clearly in the power of either State to lower its customs duties and abolish its prohibitions, without consulting the other; and as we know from experience that this is greatly for the benefit of the State that does it, whatever other states may do, it is generally considered

wise to do it, without consulting any other state. But our relations with France are very peculiar. We are allies, and yet we are mutually suspicious. It is therefore of great importance that the peaceful relations of the two states should be increased by a mutual treaty, by which the commercial relations of the two peoples will be extended, their substantial interests become more nearly identical, and suspicion dispelled. If all policy be not wholly void of foundation, it could surely aim at no more noble objects than these; and therefore the commercial treaty is to be praised for its political tendencies, even if it be obnoxious to the principles of abstract free-trade.

Such a consequence throws all mere preliminary advantages into the shade, and it seems idle and vain to declaim, after the manner of some of our contemporaries, against the superior advantages which the treaty will confer on France. We believe that it will confer much greater advantages on that country than on England, inasmuch as it is for a great step towards free trade, and for us a very small one. It only opens to us, who at present have the run of the markets of the world, a little additional market to France: in opening our markets it opens indirectly all other markets. Our people may sell a few more yards of woollen and cotton, a few more knives and razors, a few more cups and saucers; but, for the sale of all these things, they will have to compete with the manufacturers of France and the other producers of Europe, and we do not calculate on a very great increase of our exports to France from having the French for our customers. But they will acquire a great many new conveniences which will stimulate their industry and produce amongst them great improvements. To produce nearly all the manufactures we produce, they labour under no positive disability; to produce some, they have more facilities than we have; and we see no reason why they should not, after a season, produce for themselves many of those things which, in the first instance, we shall supply them with. Our coal, and perhaps our iron, their wines and olives and silks, are peculiar advantages of each, the exchange of which, though mutually advantageous, seems likely to open out for France greater facilities for future production than for England. She will send to us articles of luxury for consumption, and we shall send to her articles that aid production. As she produces more, though it be of articles with which we expect to supply her, she will be sure to become on the whole a better and more opulent customer.

It must not be supposed, as Mr. Monckton Milnes strangely asserted a short time ago, that we have hitherto had no trade with France. The total value of our trade with her, exclusive of the exchange of the precious metals, which is large, was in 1859 upwards of £26,000,000, our trade with her exceeding that with any other country of the world except the United States and India. In ten months of the present year the imports from France of wine have increased nearly one per cent, while of wheat they have fallen off to one-fourth, and of flour to nearly one-half. The change is partly due to the season, but as our demand for wine extends, and as the manufacturing interests in France expand, she will require a larger proportion of her own wheat and flour to feed her own people, and we shall not again, probably, ever receive from her in two successive years more grain of all kinds than from any other country. The trade between the two countries will undoubtedly increase much in consequence of the treaty, adding much to the wealth and happiness of both people, and strengthening the many bonds of peace that already exist between them; but probably its direction will be altered even more than it will increase. The more freedom industry enjoys the more it will use with skill the powers of nature, and the more delightful and profitable it will become.

TRUE—BUT INCREDIBLE.

WITH all the safeguards for personal liberty which are the Englishman's right, we occasionally note an occurrence which warns us of the imperfection of even the most wisely-devised institutions. Justice sometimes errs. The blind goddess, false to time, draws a prize for the criminal in the shape of impunity, and we are content to stroke our mental plumes, and exclaim, that it is better many guilty should escape, than one innocent man suffer. But when she draws a blank for the innocent, she is too apt to prove herself not blind only, but also deaf. The language which covers her eyes, stops her ears to all appeal less loud than the voice of public reprobation. Justice sober will listen to no appeal from justice drunk. A case is now before us, so repulsive in its features, that if the wrong, at length exposed, be not speedily redressed, we fear that an institution valuable in itself, and founded with the most benevolent objects, will suffer from the mistake of a petty judge, and the unreason, to use no harsher term, of its officers.

The case we refer to is that of Robert Stephenson, a poor boy, who has been now for two years a prisoner in the *Asker* reformatory ship, at Liverpool. His offence was the being found, with nine or ten other boys, sleeping in a boiler-house one cold December night. That when all very properly conveyed to the Bridewell for the night, and brought the next day before the magistrate, who dismissed all

but this one lad, eleven years of age, to their homes. He was remanded for seven days, then for fourteen, to Bridewell, and at last sentenced to five years' imprisonment in the *Albion*. He is the only surviving son of Scotch parents, poor but honest and industrious folk. At the time of their son's imprisonment, they were both on a sick bed; the mother suffering from a lingering illness, the father from temporary blindness, arising from an accident in the family he is still employed in. The boy had been brought up with all the care that the Scotch, more than other people, bestow upon the education of their children. He had received testimonials of good conduct, and prizes at the schools he had attended, and, at the age of eleven, was already earning six shillings a week in the service of the Cunard Company.

The sentence which the magistrate, appropriately named Raffles, drew out of his urn as the fitting punishment for the offence of seeking the warmth of a brazier-house in a cold winter's night, was imprisonment for five years. No other offence has been alleged against him, and the poor child has now nearly completed the second year of his punishment, in the degrading and corrupting society of the young felons to whose companionship he was condemned. In vain have his bereaved parents addressed themselves to the local authorities; equally vain have been their appeals to the Home Office. Poor Robert Stephenson has no redress to hope for, no escape from his misery, but through an appeal to public opinion, aroused by the Press. This may snatch him from the tender mercies of the law, but it is probably too late to save him from the fatal consequences of the lessons he must have learned from the idle life and vicious associates he has been forced among. Criminals may come out of a reformatory amended, but it is not a baptism which restores innocence. The innocent can only learn lessons of vice from their fellows and of rebellion from their masters. In those, as in all things, the poor boy has been unlucky. The governor of the convict-ship in which he is confined, though acknowledging that he ought never to have been sent there, shows no inclination to relax his grasp. Captain Fenwick is an excellent officer, no doubt an experienced captain of a jail, but his humanity knows but one receipt—the real—as a correction for boys' foibles. Like St. John's blistering fluid, it is sovereign in all diseases, and an admirable preventive in health. The boy is, or was, a lad of spirit. He revolts against the injustice of which he is the victim, and he is under the lash. These are crimes of insubordination more heinous in the captain's eyes, because committed against himself, than the peccadilloes of a felonious clown which consigned his other subjects to his care. The avowedly innocent prisoner is treated with greater rigour than the criminals.

The little indulgences which, by the rules of the establishment, may be provided by parents are withheld from him. The cheese and cakes which the mother from her poverty provides for him, are returned mildewed and worthless at the end of a month; and her attempt to smuggle them to him through another boy is still more savagely punished. She receives a letter from the Rev. Mr. Hankin, the chaplain, bitterly reproaching her with her infringement of rules, and admonishing to her, forty-eight hours beforehand, the severe caning he destined for her son on the Monday morning following. Not being able, in the present state of the law, to flog herself, this minister of the Gospel visits her breach of his commandments with the "fearful punishment" of her child. By Captain Fenwick's admission, the boy, who was a good boy and an industrious when he was sent to the *Albion*, is now at least an idler and a liar. His innocence revolted at being confounded with guilt; the governor punished the revolt, though convinced of the boy's innocence, and the chaplain adds gall to the bitterness. If justice and mercy go hand in hand, we see that justice and inhumanity are also fellows. If the regimen of the *Albion* succeeds in reforming vice, it is still more evidently calculated to corrupt innocence. It has been demonstrated that severity is not the fitting means for reforming adult criminals, and it has been long discarded in our schools. The employment of severity towards youth is attended with danger even in the sanctuary of home; it must be fatal when applied to the reformation of boys whose vicious propensities have been already developed. It can at best only make them hypocrites and liars. They may escape from Mr. Hankin's fustle to walk through life unconvicted, unscathed through slavish fear, not from good principle; but the greater number of his patients will relapse into worse ways than those out of which he hopes to flog them. But whether right or wrong in ordinary cases, there can be no doubt that such treatment was scandalously wrong in that of Robert Stephenson. If it was not the part of his governors or jailors to solicit his release, it was at least their imperative duty to soothe his wounded feelings by kindness, to master him by indulgence, and to atone to him by kindly, careful training for the injustice or stupidity of his judge.

PREVENTION OF MINE EXPLOSIONS.

A TERRIBLE disaster has occurred at Risa, South Wales, a few miles from Newport. An explosion in a mine, by what means caused we have yet to learn, has hurried upwards of one hundred and twenty human beings out of existence, and spread heartrending

anguish through a greater number of families. It will remind the public, already pained and dismayed by the frequency of such accidents, that a great deal is required to be done to prevent them. It is a sound to science that they ever take place; and till they be prevented they will be a scandal to our civilisation. Can they be prevented? We believe they can. We now see vast reservoirs in every town of a gas made from coal, which is nearly akin to the explosive air generated in coal-mines. We know that it only requires to be mixed with a certain quantity of atmospheric air to be equally dangerous, and yet we see it carefully kept under control, distributed over many miles, conveyed in the end to millions of burners, and there not merely harmlessly consumed, but consumed to the production of an artificial day which may almost be said to double our existence. The very substance—or gas so closely akin to it as scarcely to be distinguished from it—which below ground, untamed, unmanaged, destroys life in the most fearful manner, above ground illuminates our houses and our streets. It is like fire, which, properly controlled, is our ablest servant, and uncontrolled is the most terrible of our masters. "Wohlthatig," says Schiller,—

"Wohlthatig ist des Feuers Macht,
Wenn der Mensch beständig bewacht;
Ist es erlöst, was er schaffet,
Verdrückt er dieser Himmelskraft.
Durch Furchen wird die Himmelskraft,
Wenn sie der Fessel sich entrafft."

Why, then, is not this fearful agent in our mines put into chains, and made useful to us like fire, instead of being destructive? Why is it not collected in mines where it is naturally generated, and led in pipes to the pit's mouth and burnt there, lighting factories or setting steam machinery at work, or burnt in the case of the multitudes of ways in which coal gas is now so usefully employed? There is no difficulty known to theory in the way of accomplishing such a work, and the destruction now caused by gas, or fire-damp, not being judiciously employed or judiciously got rid of, is a strong admonition from Nature as to employ it, and so lessen labour, and save time, money, and lives.

Though it is too early to say from what cause this explosion occurred, it is well known that the dread of being blown up cannot make miners prudent. They will readily uncover a lamp to light a pipe; they need often more light than a "Davy" gives, and they impatiently procure it. No scheme of ventilating mines would be perfectly safe which does not prevent miners from coming with their lamps into contact with choke-damp. The question, then, for scientific and practical men is, Can it be collected as it is generated, and conveyed from the spot where it is generated, in pipes, beyond the reach of the miner to the mouth of the pit and the surface of the earth? It is a good principle to apply mechanism wherever it can be applied as a substitute for human agency; then we enlist the unerring powers of Nature on our side, and have no occasion to fear the want of discretion in any of the persons employed. A self-acting apparatus, constructed on the principle of the relative gravity of gases as affected by temperature, is the thing wanted; and this scientific men should teach miners how to construct, or their knowledge will be thought of little worth.

If it be not, however, possible, as we believe it is, to collect the gas naturally given out in coal-mines, and conduct it in one stream to the surface, at least there is no natural impediment to ventilating every mine effectually. The art of ventilating is fully known, and it is only necessary that it should be properly carried out. No cost can for one moment be permitted to stand in the way of such necessary work. There is not a family in the kingdom which, while it enjoys the conveniences and comforts of a coal fire, and is sensible of the wealth and strength the country derives from its collieries, which would not, most willingly, pay sixpence or one shilling a ton more for coals, in order to ensure the safety of the colliers. It would not willingly purchase its own enjoyments by sacrificing their lives; and whenever the mine-owners allege, as an excuse for neglecting the duty of saving the lives of the colliers, the expense of the necessary works, they will be answered by an indignant outcry of the pecuniary means from every family in the empire.

But this is not necessary. The coal-owners obtain enormous wealth by the mines secured to them as property by the public, and they are not justified in taking a sixpence for their own use, till the safety of the colliers is amply provided for. The public will willingly pay a tax for the purpose if necessary. It pays enormous taxes to obtain much less advantages. But as long as the owners of mines obtain immense wealth from them, it will hold them inexorable for neglecting a single precaution to secure the safety of the hard-working ill-faring colliers. No class of men is more serviceable to the community; no class undergoes greater privation, and the very least the public can do for them, is to insist that the owners to whom it concedes the property of the mines, should cherish the lives of the colliers as they cherish their own.

Not only from the example of what is done above ground with gas, but from what is done under ground in several mines and pits both on the Continent and in England, it is clearly demonstrated that these terrible accidents are preventable, and the mine-owners are bound to prevent them. They are confirmed in the possession of the mines by

the public in order that they may be worked for the public advantage. Every one now knows that this is always best secured by each seeking his own advantage; but the mine-owners and every one else must be firmly held to all the responsibilities which this principle imposes on them. The mine-owner must not by the support of the public grasp at wealth to the destruction of life; and the law which gives him the ownership should make him pay or recompense, as far as he can, every person in the least degree injured by his neglect. Railway companies some time ago used the privileges conferred on them by the Legislature with great negligence, to the infliction of much injury; and when they were made responsible in their purses, railway accidents were not so numerous. This example should encourage us to enforce very stringently on mine-owners the responsibility which they incur.

We do not advert further to the particular case which has called forth these remarks. The Government has taken on itself some responsibility for the collier's safety, by appointing inspectors and interfering in the management of mines, and we shall consider it blameworthy if it do not enforce on the mine-owners in every part of the empire the obligation of preventing all such accidents. If they can be avoided, the mine-owner who permits them is little better than a murderer; while the Government which supinely acquiesces in his negligence will be an accessory before the fact.

THE IRISH "EXODUS."

IRELAND is prospering, the cultivation of its lands extending, the amount of its produce increasing, its material wealth accumulating, various branches of industry developing, the remunerative prices of labour rising, and yet, its peasantry are emigrating—emigrating in such vast numbers as to excite the astonishment of the least observant spectator.

Why is there this constant tide of emigration pouring out of Ireland? and why, to use the words of an Irish journal, has "the tide of emigration become a torrent?"

The question is surely one of interest, not merely to the dweller in Ireland, but to the people of England.

If we look to the causes of this emigration, and endeavour briefly and accurately to describe them, we are forced to have recourse to two French terms, by declaring that the incidents of late years, and the laws enacted, have combined to elevate the Irish *bourgeoisie*, and to depress the *proletariat*.

The only exception that can be made to this general remark is the rise in wages consequent upon the decrease of population. Apart from this rise nothing has been done to attach the peasantry to the soil, whilst several circumstances have occurred calculated to induce them to abandon their native land. Old habits have been broken through; the ancient mode of living has been discontinued; unkindness, nay, even cruelty, has been exhibited in the time of direst distress; temptations to expatriation have been employed; the perpetuation of peasant holdings has been discouraged; these in whom the Irish peasantry reposed their confidence have disappeared, or have shown themselves to be "false prophets," and "the speculations," social and political, which such persons encouraged, have proved to be "delusions," and the hopes that were thus nurtured have had no other ending than blank disappointment, or absolute despair.

When men express their surprise at the menacing flow of emigration from Ireland, let us see what has become of the peasant-holdings in that country.

At the same time that there is a diminution in the number of farms in Ireland, there is an extension in the breadth of land available for agricultural purposes. We observe how as the means of feeding men have been enlarged, the number of small farmers and cottiers' holdings has lessened. A few figures will make these facts more comprehensible than any elaborated statement.

In 1841 the number of acres of arable land in Ireland was 13,461,300, and in 1851 it was 14,802,581. In 1841 the number of acres of uncultivated land in Ireland was 6,295,735, and in 1851 that number was reduced to 5,023,984 acres. Much more than this has been done in the way of improvement. The gradual reclamation of the estuaries of rivers, bog margins, and waste land, as well as the drainage of marshes, have increased the arable land from 13,461,300 acres in 1841 to 15,278,720 acres in 1858.

Let us now see what, at the same time, has become of the holdings of the small farmers—the peasantry of Ireland. In 1841 there were 310,375 farm holdings above 1 acre and not exceeding 5 acres; and in 1858 there were but 83,219 such holdings. There were in 1841, 252,778 holdings above 5 acres and not exceeding 15 acres, and in 1858 there were but 181,267 such holdings.

We wish, at once, to remark that we do not enter into the disputed question as to the desirability of having "large" in preference to "small" farms. What we are dealing with is the emigration of the peasantry from Ireland, and "the causes" of that emigration.

One great peculiarity of that emigration is its "nationality,"—that is, the manner in which it has most deeply affected those parts of

Ireland which are, beyond all others, purely Celtic. It is curious to find that the districts of Ireland that have been the most depopulated, whether by famine or emigration, are those in which the Irish language is most universally spoken. These are Clare, Cork, Donegal, Galway, Kerry, Limerick, and Sligo. The general total of emigration from all the Irish ports from 1851 to 1858 is 998,198 persons! Nearly one million of the Queen's subjects, in the prime of life, lost to the British islands!

There have been national migrations in former times—men, with arms in their hands, accompanied by wives and children, and led by their warrior kings, have sought to win or to settle the possession of lands more fertile, and the enjoyment of climate more genial than their own. But here we see a peaceful population abandoning civilization, their relatives, the birthplace of their sires, to seek for subsistence in wild forests, in bleak countries, or in inhospitable foreign cities, contaminated by vices of which their old fatherland was completely free. "Who," says Tacitus, "would ever seek an abiding home in Germany—uncultivated, miserable-looking, bleak Germany—if it were not the country in which he had been born?"—"Inqui sit patria sit!" But the Irish have emigrated, by hundreds of thousands, from Ireland; they have left its green soil to live amid the snows of New-England, and they have repudiated the protection of English law to expose themselves to the rude passions and murderous weapons of ruffian gold-seekers in California. They are scattered over the face of the globe, and yet have never settled down in a land as productive or as beautiful as their own.

What has urged on this "national" emigration from Ireland? Many things have done so, and we shall endeavour shortly and candidly to explain them.

Previous to the failure of the potato crop, the system almost universally adopted throughout Ireland with respect to small farmers and labourers was to allocate to them a small portion of land—used by the occupant for the production of vegetables, and, above all other purposes, for the growth of potatoes, the staple food of the poor man and his family. According to the circumstances of the farmer or labourer, this piece of land was either barely sufficient for a potato-crop, or it was sufficient to raise an additional quantity of potatoes to feed a pig; or it was, moreover, sufficient to grow a cow, and perhaps to have a smutty crew of oats. Attached to the scrap of land was a cabin, built, not by the landlord but the tenant, and upon both a high rent was placed—enormously high, considering the wretched condition of the land when first let to the cottier. This high rent was very seldom to be paid in money. The rent was calculated at so many days' labour, and by the small wages awarded to each day, the rent was expected to be discharged. No money passed between the landlord and such tenants. The only mode of procuring clothing and other necessities was by the sale of the pig or poultry, or oats or butter. In some parts of Ireland the dealings between farmers, labourers, and shopkeepers was by barter, a very small amount of coin circulating amongst the population.

In point of fact, previous to the potato-rot, the condition of the cottier—the small farmer and labourer—was like to the serfdom of the middle ages, but without the ameliorating spirit of the olden time; for it could not be said of them they were "paricidas ad opera et censea medicos hominis obstricti;" and never in Ireland did a humane law make this provision respecting them: "*pro nimia paupertate non servient neque adiant.*"

A society so constituted was overwhelmed by the failure of the potato-crop. The miserable population had no resource from starvation in the workhouse.

And here we come to a point very painful to dwell upon. Never did the generous and humane spirit of the English people more nobly manifest itself than during the great Irish famine. Public subscriptions, private donations, and magnificent grants from the Treasury, were calculated—if they had been wisely administered—to avert the horrors of starvation. But, as the British army was slain by maladministration in the Crimea, so were the Irish poor slaughtered by maladministration in Ireland. As Balaklava afforded the proof how, with abundance of food and clothing, a whole army, a few miles distant, could be decimated by hunger and cold, so did the managers of British generosity in Ireland contrive to misemploy the funds confided to them, and yet leave, as the proof of their incompetency, authenticated deaths, from sheer starvation, of no less than 21,770 persons. Taking into account those whose constitutions had been broken down by previous insufficiency of food, and so fell victims to fever, cholera, dysentery, and diarrhoea, the deaths caused by maladministration in Ireland amounted to 114,343!

We are well aware that it is the practice in Ireland to throw the whole responsibility of such an awful waste of human life upon English officials. Such an accusation is unjust and untrue. We do not for excuse English officials, because in such circumstances they were incompetent or negligent; but we maintain that the heaviest portion of the burden rests upon the shoulders of the Irish themselves, and upon the landlord class in particular. The Irish landlords were either directly themselves, or indirectly through their agents and dependents, the administrators of relief; and the manner in which they conducted

costs only about one-fourth of the money charged for the cattle compounds. There remain only the condiments or stimulants, which may perhaps be of use to working horses or weakly animals, but can scarcely be worth the vast sums paid for them in the "cattle food."

Finally, Mr. Lawes gives the results of the practical trial of the food on a lot of pigs. He put up two lots of three each. One lot he fed on nine parts of barley-meal and one part bran. The other lot received nine parts barley-meal, one part bran, and two parts manufactured food. In twenty-eight days the three pigs fed without the compound, consumed 547 lbs. of food, and increased 139 lbs. in weight. The other three, which received the same food, with two parts of the manufactured compound in addition, consumed 556 lbs. of food, and made precisely the same increase of weight, i.e. 139 lbs. Here we find the cost of the compound wholly thrown away. This would seem to be conclusive.

These compounds seem to consist of some of the ordinary substances used for feeding stock, reduced to a very fine powder, the agency of heat and machinery, to which are added condiments and stimulants in small proportions. Packed in imposing cases, and advertised and peddled without stint, they no doubt improve, in some instances, the condition of their manufacturers, whatever may be their effect on the stock of such farmers as are induced to buy them.

There is one thing, however, which farmers may learn, perhaps have learnt, from these food-manufacturers, which is, that occasional variety and some mixture of food for fattening stock are rather beneficial, and, especially when animals have been feeding for some time, tend to promote the health of their stock. The limits of such benefits are, however, very narrow, though in these days of farming competition, not to be altogether overlooked. Something of this sort was tried last year amongst the horses of a great public metropolitan company; the corn on which they were for some time fed, consisted of a mixture of oats, barley, and maize, instead of the same weight of oats—the barley and maize forming a small proportion of the whole—and the horses were found to be in better condition, and to have increased in condition, as when fed on oats alone, while, at the then relative prices of the several grains, a slight saving was effected.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

THE news from Italy has somewhat flagged in interest, but in real importance has not at all diminished. The consolidation of the new Kingdom of Italy goes heavily on. Victor Emmanuel has been most warmly received by the Sicilians, who seem to enjoy their long dream of a reunion with the House of Savoy, of which they were deprived in 1849, just as their hopes seemed to be on the eve of being realized. The salutes of the English ships as was their monarch left the Bay of Naples sounded most gratefully on the ears of the Italians, who regarded them as the death-knell of many a tyranny, lay and clerical. The ex-King of Naples still holds out at Gaeta, trusting to the doctrine of chances, but has sent away all his baggage and treasure, ready for a start.

Bonzo was the only Neapolitan general who made light against Garibaldi in the open field (at Melazzo). He has been rather foolish in consequence. He gave his word not to fight against Garibaldi, when he was allowed to depart in a parole. He left Naples in the same manner with distinguished Englishmen for Genoa. He went on shore at Civita Vecchia, where the Donais endeavoured to persuade him to return to Gaeta. They urged that, although he might not fight for Francis the Second, he might advise him. But he remained true to his word. He was deaf to the cautions of the priests, but his vanity has not been proof against the allurement of the Faubourg Saint Germain, and he is now at Gaeta, awaiting a more humiliating end of his crusade against liberty than even that of Lamoricière himself. The Bourbons are all assembling at Home. When Napoleon III. shows his confederate Victor Emmanuel, to dictate terms to the Garibaldis, he will be able to throw his net over a considerable number of his personal enemies in the Holy City.

In the mean time everything looks menacing for Austria in the coming spring. The Hungarians (under Klapka, the defender of Comorn), the Poles, and even the Greeks are joining foreign legions at Genoa, where the raw material of Garibaldi's force was first organized. It is not likely that the Austrians can look with unconcern upon all these preparations, and the organisation and increase of the army and navy of united Italy.

I have received strong confirmation of my statement of last week, of the activity of the Hungarian exiles, and of the sympathy and support they have received from quarters, able to give force to their opinions in favour of the restoration of the rights and privileges of the old Hungarian kingdom. The provinces on the Danube are all astir, and the Greeks are alive to the chances of strengthening the political importance of their race.

These are amongst the signs of the times, which it would be well for the Russians neither to disregard, and which Austria in particular should bear in mind in the settlement of the Venetian question.

The latest news from New York, where they must know the proper value to be placed upon the noise and bluster of the South, shows that the slave-owners have not succeeded in destroying the credit of New York, in intimidating the non-friends of Mr. Lincoln, or even in making any strong impression upon the non-interference of Mr. Buchanan. It is necessary to view these matters calmly, in order that our own moneyed interests may not suffer by a panic which is evidently got up.

The Emperor Eugénie has been received throughout Scotland and England, not only with respect, but with the delicacy due to her recent sorrows. The notice of the *Moniteur* shows how sensitive the Emperor is to public opinion in England. While describing, with evident satisfaction, the very cordial reception of the Empress by all classes of Englishmen, the official paper has a somewhat unnecessary and unbecoming attack upon the Press. It is difficult to make the French understand our perfect freedom of discussion, and the latitude with which

we assail not only the policy of our own rulers, but even the personal character of our public men. We may not approve the policy of the French Emperor in all things, nor be content with his secret designs, which only keep Europe in hot water; but that is quite consistent with admiration of the Empress, and hospitality to himself.

Although we are sorry to lose Count Persigny, when we look upon as the most honest and the most disinterested of the friends of the Bonaparte dynasty, we are glad to see him in the Home-office in France, because his presence there is an indication of greater freedom of discussion. The appointment of the Ministry, and the appointment of Ministers without a portfolio, specially commissioned to take part in the debates, is a vast improvement upon the spurious system of semi-official pamphlets, as indicating the imperial policy. The new system is more constitutional and satisfactory in every way, besides that it may lead to the restoration of discussions during the sittings, as well as at the opening of the session. We are informed that M. Fould was in favour of advancing farther, instead of being opposed, like M. De Morny, to the reform, even so far as it goes. The Ministry is improved by the change, and contains the men most favourable to further advances in commercial freedom.

The necessity of reinforcing Sir Crosswell Crosswell becomes more apparent every day. He ought to have an assistant Judge for Probate, and another for Divorce. If the House of Commons is parsimonious in small matters, the increasing business will produce enough of fee to pay the two assistant judges. As yet the court has not gone beyond the probate cases remaining for trial. The rehearing of the *Sheldon* case occupied twelve days, the great scandal of Dent and Denham three days. During the hearing of this last case, the notorious Dr. Smedley was in constant attendance.

The new copper coinage is issued. The delay has occurred from the inferior quality of the coin, and not from any controversy about the two T's in Brit, the inscription for Britanniarum. The repetition of the two last consonants was common on the Roman coins, and has been frequently used on our own. It is the formula in many Latin abbreviations, such as MSS., Cons. for Consul, L.L.D. for Doctor legens, &c. The new coin has one advantage—lightness—over the old. But it is meagre in design, and faulty in execution. It is not dark brown, but a mixture of copper and zinc, in which the copper predominates. The issue must be a great gain in weight of metal to the Government, or more likely to the contractors. It is probably a Birmingham job. The issue is a disgrace to the authorities, who have kept it back so long.

Those who dreaded the greater scandal from the cases of divorce, may see that the probate causes are not very fit to meet the public eye. I wonder what will be the lessons of Lincoln's law say to Mr. Justice.

The cruelty of the Cambridge proctors has received a blow from which it will not recover. Public opinion will not tolerate the brutal punishment of young female of humble rank, whilst their sex-called superiors of the other sex are allowed to go root-free. We trust Mr. Edwin James will extend the blessings of the *Habes Corpus* to the twenty-three cells of the Spinning House, as well as to the prisons of Italy.

The Southwark Election, fixed for Monday, has become more interesting than it promised at first. It was seen from the beginning that a political notoriety would have a good chance against any merely local notoriety. Whether Mr. Layard was the best man to win the county, he would be the disadvantage of being late in the field, and had also said that he would not interfere to divide the Liberal party. But he has been very active, and has made great way. The manner in which Mr. Fawcett has been received by the working men of Southwark, is highly to their credit. His infirmity has excited sympathy, instead of being regarded as a disqualification. He has been able to prove himself a very gifted and intellectual young man. There is a very able paper of his in the current number of *Macmillan's Magazine* on "Darwin's Origin of Species." If he goes to the poll, it is evident that he will receive a very considerable share of support.

THE LATE EARL OF CAMBRIA. The unexpected loss of this nobleman (says a personal acquaintance) at his seat Stockpole Court, Pembrokeshire, furnishes a source of extreme regret to his acquaintance and neighbourhood. With an agreeable person, prepossessing countenance, cheerful manners, and more of a youthful gaiety than common at his years, he won the esteem and good will of all with whom he associated. He was well read; had lived a good deal with literary men of repute, such as Rogers, Moore, and others of similar stamp, of whom he took some amusing anecdotes—and the present writer is obliged to him for pointing out some useful passages for biographical reference, in turning over several of the volumes in his well-stored library. For Rogers he had much regard; and, as a poet, thought of him highly. In company with Moore, he and two or three familiar friends, visited De Ville, in the Strand, to inquire their philosophical developments. All were unknown to the sage; and Moore's benevolence, upon examination, such as his dispassionate, furnished no evidence of being a sinner in poetry, but rather a tendency to mathematics! The adventure gave them some amusement in the walk home. Without even claiming the ear of the House of Lords, he was one of those practical men who, when there was business to be done, could do it diligently and well. He was often on committees. In conversation on this subject, he once remarked—"Laborious and commonly uncoloured as such duties are, I deem it matter of serious public duty to perform them conscientiously." By great presence of mind, he carried through an important business, the establishment of the "High School" to English Courts of Justice. He likewise carried, amid many obstructions, a bill for the better management of roads in South Wales, which had become a serious taxation on the agricultural classes. In political opinions, his tendency was towards a Whig about twenty years ago, however, when the ardour of change appeared to be pushing opinions to doubtful practical results, he joined in their support. The writer remembers to have heard him then express to an acquaintance in something of a jocular style—"A Whig. What I am now I can scarcely venture to designate, otherwise I should be liable to a direct rebuff to all the existing institutions of my country." It is said that at one of his seats—Gibben Grove, Carmarthenshire—there is an extensive collection of Welsh penological manuscripts, culled to throw light upon the pedigrees of various families in that country.

THE GOUTY PHILOSOPHER.—NO. XXII.

MR. WAGSTAFFE BLOWS HIS BLAST AGAINST TOBACCO.

I AM glad to see that Sir Benjamin Brodie and others, competent to speak on the question, have raised a warning voice against the evils likely to befall our civilisation from the rapidly-increasing passion for tobacco. I hail these men as converts to my doctrine. Ten years ago I, John Wagstaffe, broached the subject in print, though my incursions met the fate of those of all other too early reformers, and fell under the blighting influence of the great Poon Poon. I find my theory on the subject of tobacco—and that, I am glad to see, of Sir Benjamin Brodie and Dr. Copland also—in the following lines of a poem by a friend of mine, published more than a year ago:—

"Deterioration of the human race,
Steaming of stature, drying up of brain,
Shrivelling of beauty, and decrease of years,
All from tobacco, and its sensuous use."

And I assert that my friend is right, and that all these, and a thousand other evils, spring from the insatiable passion for tobacco, and leave from a tree Tobacco-smoking is my favourite aversion. I find it expedient that the hatred which is in me should find a legitimate vent, lest it should breed disease in my moral system,—and that vent is the Tobacco-phobia, from which not King James himself, of learned memory, suffered in a greater degree than I do. I may

"Composed for me I am inclined to,
By denouncing those who have no mind to."

But I shall not tell the world my sin; suffice it to say, that tobacco is my æneid-poem. I believe I should be too happy in this world were it not for the miseries inflicted upon me by the spectacle of the mad lore for the deleterious weed in which my fellow-creatures indulge. I am in good health, were it not for an occasional twinge of that GOUT which I am endeavouring to subdue; I have not been jilted by woman, or insulted or deceived by man. I neither crave money, power, nor honour from a human being; I have more money than I want, and far more than I can spend, except in charity; though, to be truly charitable, and to discriminate between rogery and misfortune is no easy matter, and a business by itself, as most millionaires, if they happen to have good hearts (a rare thing), doubtless can testify.

As for honours, I would rather be plain John Wagstaffe, than Sir John or Viscount Wagstaffe, or the Duke de Wagstaffe. The garter for Wagstaffe? Wagstaffe has two, but wears socks, and does not need them. A star for Wagstaffe? Wagstaffe has as much enjoyment of the stars, and of the sun and moon besides, as the Emperor of China. And as for power, where is the mighty monarch, whether he live in Bliflemen, Lilliput, France, or Turkey, who does not find power a burthen, of which he would now and then be gladly rid, if we could only get at the truth that sleeps in the deep recesses of his heart? As for me, I am persecuted by my fellow-creatures, whom I love; I am the martyr to a social nuisance; I am the victim of my over-sensitive nose. Civilized men have entered into a conspiracy to poison the air, my property as much as it is theirs. They smoke tobacco, and make furnaces of their jaws. "They feed upon ashes, and cannot deliver their souls." They chew or masticate the poison, and turn their mouths into abominations. They grind it into a powder, and make dust-holes of their nostrils. I, and the women and the children, and all the birds of the air, and all the beasts of the field (a clear and very decided majority of the creation), are assaulted, and distressed, and poisoned by this daily-increasing evil. It is not only men, petricians and plebeians, monks and monksini, law-makers and law-breakers, head-workers and hand-workers, and fellows who never work at all, but abominable boys in their teens, who indulge in the filthy habit! I must confess that I never see a boy smoking without feeling a strong impulse in my toe, urging it towards a part of his person that shall be nameless. Some day or other I am sure that I shall indulge my toe in the luxury it covets, and shall cheerfully resign myself to the consequences, which cannot be worse than a newspaper paragraph, with my respectable name in it, headed, "Savage Assault by the Gouty Philosopher," and a fine of forty shillings, or may be five pounds, inflicted by some staid Solon of a London police district. In my house a smoker never enters. I would discharge the best footman that ever wore plush, if he dared even to take a pinch of snuff within my gates. I would immolate my estimable butler—he is sixty-five years of age, and has been forty-five in the service of the Wagstaffes, *père et fils*, and has a head white as the driven snow. Yes! I would immolate even that good man with a just retribution if I discovered him with a pipe in his mouth.

It has been said that there must be some virtue in tobacco, of which people who hate it are unaware, when we find it such a favourite among men in all climates and latitudes—among men civilized, semi-civilized, and barbarous—among men of all religions and modes of thought—among men who agree in nothing but their love of it. Of course I do not deny that smokers find an enjoyment in their habit. I admit and deplore it. Multitudes of men and women in Europe and America find an enjoyment in drinking, to excess, of gin, whisky, rum, and brandy; other multitudes, still more dense, in Asia, find an enjoyment, equally fierce, in drinking ludanum and eating opium: but are we to defend the gin-drinker, the whisky-swiller, or the opium-eater, because he is not alone in his inanity, and because he has the countenance of the society in which he moves for his beastly indulgence? Let me retract the offensive epithet, O ye forlorned beasts! Ye live according to the laws of nature, and only eat and drink what she has pre-

scribed for you. No animal except man indulges in intoxication, whether of tobacco, of alcohol, or of opium. The pig, it is true, has been known to get drunk, when man took advantage of his ignorance and placed the brewer's wash in his way; and the goose has also been observed to become slightly intoxicated, when betrayed into it by man; but even pig and goose revolt indignantly against tobacco. No temptation can make them tolerate smoke for an instant.

Boileau has said, that,—

"Tous les hommes sont fous, et mangent tous leurs sens;
Ne diffèrent entre eux, que du plus ou du moins."

And Pope after him has repeated that nature can do no more than tell us we are fools. If proof were needed to confirm the dicta of these poetical philosophers, the passion for tobacco would of itself be sufficient. Disguise it as we will, tobacco is poison: poison to the nose, poison to the palate, poison to the lungs, and poison to the stomach. In the form of smoke it is doubly poisonous, for it not only poisons the smoker himself, but the harmless inhaler of the common atmosphere who has the misfortune to be in the same room, or in the same railway carriage with him. Good results may spring from a poison if administered medicinally. Were tobacco only taken by men as prussic acid is, in obedience to the prescription of a skilful physician, I should cheerfully acknowledge that, like prussic acid, or any other respectable poison created by an all-wise and all-beneficent Providence, it had its uses. But men do not use tobacco as a medicine; they abuse it as a luxury. They love it for its unwholesome effects. When the nerves are unduly excited by the competitions, struggles, sorrows, or excesses of a worldly life, they must be soothed, naturally or unnaturally. The natural mode is to discontinue the causes of the excitement, and to live temperately, moderately, and contentedly. The unnatural mode is to deaden and stupefy the nerves; and tobacco is the medium for accomplishing it. If a man is starving with hunger, or with cold, tobacco relieves him; but he would be relieved much better by a good dinner and a warm bed.

Every argument employed in favour of tobacco is an argument for alcohol and opium. If tobacco be found useful as a stimulant or a narcotic, so are other poisons; and if stimulants and narcotics are so good, so necessary, and so delightful, why should we confine ourselves to the one poison, when all the poisons of all-homocent Nature are before us? Why do we leave opium to the Chinese only? The strength temporarily given by laudanum to weak and nervous people, who addict themselves to it, is quite as great as that afforded by tobacco; and the bright visions that may be conjured up in the diseased brain of him who eats opium, are far greater than any that dawn upon the mind of the tobacco-smoker; but we think we shall escape the penalty more easily with tobacco than with either of them. But all such borrowings from Nature are ultimately injurious. Nature is inexorable. She exacts a penalty for all transgressions. She is filled with benevolence, but she never pardons a wrong done against the majesty of her laws. Nature cannot forgive a wrong against Nature. She punishes the use of tobacco, in all its forms of smoking, snuffing, and chewing, and has decreed that its abuse shall destroy the stomach and emaciate the frame; that it shall first soothe, then flatter, then destroy the nervous system. She has also decreed that it shall make the teeth black or yellow, cause the breath to become offensive, and that it shall disorder and impair the intellect. Doubtless it will be said that these are the results of the abuse of tobacco. But the smallest use of that which is not wholesome or necessary is an abuse. Let any one, who denies, appeal to all the doctors and all the philosophers of the world, and take their answer. If, after he has got it, he continues to smoke habitually, his punishment be on his own head. He will have doubly deserved it, for he will have sinned with his eyes open.

I once drew up the plan of a great work, in which I proposed to treat the subject of tobacco in all its bearings and under-bearings, in all its ramifications and sub-ramifications, historical and philosophical, political and religious, social and anti-social, public and domestic, national and individual, with a whole host of minor subdivisions branching one out of the other like the progeny of the polyp. The headings of my chapters threatened to become infinite. Unlike the author who, in 1797, circulated proposals for publishing by subscription a history of snuff and tobacco in two volumes, I did not intend to circumscribe the fair boundaries of this subject into any such compass. His proposal related almost entirely to snuff and to snuff-boxes, with the relative subjects of sneezing and pocket-handkerchiefs, and did not enter at all into the great and paramount evil of smoking. My subject on the contrary was of larger scope. There was, first of all, to be a chapter upon the influence of tobacco—including smoking, snuffing, and chewing—upon the wealth of nations and the fortunes of individuals. Then, again, there was to be a chapter on the influence of meerschaums upon the political and social progress of the Germans, and upon the probable obscuration of their national intellect by smoking. Cloudy metaphysics and clouds of tobacco-smoke would have been illustrative one of the other; or might have been proved to hold the relationship of effect and cause. Following out this line of thought, I should have had a chapter on the influence of cigars on the intellectual and moral condition of Englishmen, Frenchmen, Spaniards, and Italians, as well as on Asiatics and Americans. This would have led to an inquiry into the domestic consequences of smoking, and to a calculation of the number of women and homes made wretched by the insane passion. I was also prepared to prove that tobacco-smoking diminished the fecundity of the human race, and caused loss

of strength in the male children, and premature loss of beauty in the female after the second generation. I had also to moralize upon the vast amount of drunkenness which is directly and indirectly fostered; and to consider, at the same time, its effects on the human brain in relation to intellectual beauty, and to the Fine Arts, which had their origin in a love of intellectual and physical beauty combined. This was a most prolific vein to hit upon. I had a theory, though I soon abandoned it, that no man who snuffed, smoked, or chewed tobacco, ever did, could, or would, write a great poem, model a fine statue, paint a fine picture, or compose a beautiful piece of music. I gave this up, however, as regarded smoking and snuffing. The names were too many against me. Nevertheless I drew the line at chewing, and maintained, as I do still, that no man, Yankee or no Yankee, who chews tobacco, ever did or ever will, or ever can model, depict, or express physical or spiritual loveliness in any shape or mode whatsoever. I held out for a long time upon snuffing; but was driven into a corner by a friend who cited the names of many snufflers who had greatly distinguished themselves in every branch of the Fine Arts. I made a stand, however, against the snuff-takers on one great and essential point; and asserted that no snuff-taker ever enjoyed or could enjoy the delicious perfume of flowers—God's daily blessings and beauties showered upon us—with a tittle of the intensity of the man who never polluted his nostrils with the abomination. I asked triumphantly—and there was none to answer—whether any habitual inhaler of nupce could inhale satisfactorily and completely the delightful fragrance of the mix of the valley? Or, whether any man who indulged in Prince's snuff or Irish blackguard, could do so as I do upon the rose and the eglantine, the meadow-sweet or the orange-blossom?

Another and widely-extending branch of my subject was to state fairly and content triumphantly all the arguments that had been adduced in favour of tobacco, such as its soothing effects upon the nerves, its relief to the overburdened brain of the tolling student, its sociability, the kindness of disposition it engendered, and the friendships that were formed in asking for a light, or proffering the box, with many others of the same force or weakness. The subject at length grew so rapidly upon my hands, that I became scared at its magnitude. I had no idea of being the author of a book in twenty-five volumes; and, besides, I greatly doubted whether any enterprising publisher would have enterprise sufficient to take the money risk of such an adventure, even although I contributed, as I would have done, all my labour for the love of the cause. So I gave it up, after due cogitation. I recommended it, however, to aspiring youths who desire to immortalize their names, and only hope some great bibliopole will deal liberally by the author who shall accomplish it, and that after-ages will erect a respectable monument to his memory.

The derivation of the word tobacco has always been a puzzle. Some are of opinion that it comes from the name of the island of Tobago. Heriot, the mathematician, who was sent out to Virginia by Sir Walter Raleigh, to aid in colonizing the country, gives an amusing account of the pretended virtues of the plant, which, he says, was called Uppowoc, by the aboriginal Virginians. The passage is quoted from Hakluyt, by Mr. Fraser Tytler, in his life of Raleigh. The etymology, however, is of no consequence. Poison is poison, by whatever name we call it; and tobacco, whether derived from Tobago, or from Uppowoc, or from the Greek *baccia* (insanity), is neither more nor less a weed, given to the world by Providence for some good purpose as yet undiscovered, and in the mean time perverted to evil purpose by the love of intoxication so prevalent among men. Tobacco, alcohol, opium—the man that loves the one, only wants opportunity to love the others. They are all of the same detestable family—but by men into their mouths to steal away their brains—with this addition of evil in the case of tobacco, that it not only steals the brains through the mouth, like opium and brandy, but through the nose.

But the whole thing is baldi. I verily believe, if it were the custom of society that men should put a pungent powder in the eye for the sake of producing an excitement, that men, and boys also, would blind themselves with the same cheerfulness and good feeling with which they now smoke, or stuff their nostrils. Let the non-smokers rejoice. At all events can keep the roses on their cheeks, and bloom on to seventy. But the smoker withers away. The non-smoker is fresh as the apple on the tree; the smoker is the apple dried up into a Normandy pippin. In fact, the use of tobacco is drying up the very bowels of the French and the Americans, and fast destroying the fecundity of the European and the Anglo-Saxon race. The Americans are old men before they are fifty; and the loveliness of their women, the daughters of such men, withers away ere thirty. The same thing has happened in Germany and in Spain, and will happen in England in the next, if not in the present generation.

I may be asked, in conclusion, if I cannot say one good word for tobacco? To which I answer, yes, one, and one only. Were it not for the passion that Englishmen and English boys have conceived for it, the national revenue, from indirect taxation, would be less by about five millions sterling per annum. And that sum would have to be provided for by direct taxation in the shape of an increased Property and Income Tax. Therefore the people who smoke, and snuff, and chew tobacco, in these realms, diminish the amount of my income tax by at least five-pence in the pound. So I sate a round sum annually from that cause alone. That is the only good thing John Wagstaffe knows about tobacco.

THE MORAL OF THE PRINCE'S VISIT TO CANADA.

(FROM A CORRESPONDENT AT QUEBEC.)

THE heir-apparent to the throne of England has now seen republicans America, and a British colony. But he has seen these under circumstances not well calculated to afford a just idea of the normal condition of this country, through the provinces was a scene of confusion. Since he saw the people had laid aside their ordinary avocations to do honour to their Prince and the occasion; his advent was everywhere the signal for holiday, and the single thought in every city, town or hamlet (not even excepting Kingston and Belleville) was how to make the reception most complimentary—how most fully to demonstrate their own loyalty and devotion. Thus some mistakes have occurred can hardly be a matter of surprise, but as far as regards the people of Upper Canada, these were of the head, not of the heart. Other parties were undoubtedly to blame besides those who were ostensibly the delinquents. Much as has been said respecting the arch rascal, who was undoubtedly expressed was calculated to inspire.

True, there followed the unseasonably (as unseasonably the people) Upper Canada holding the pen would write a much stronger word, but let that pass—the unseasonably kicking about a picture of His Royal Highness—mounted and in the attitude as generally portrayed of the Prince of Orange—followed. One great authority scored, the lower end dissembled, and licked the dirt from the dical bone. The latter disgust of all Upper Canada was written by the Duke of Newcastle upon the propriety of avoiding religious or party distinctions; yet his grace made no remonstrance when the Anglican Bishop of Quebec was forced to appear at the landing of the Prince untended by his clergy, because the Roman Catholic hierarchy insisted upon precedence. The difficulty was compounded by the fact that the Prince had to walk with the Roman bishop, the Roman Catholic clergy following: the Anglican clergy not being present. Considering this to have occurred in a British colony, and in the presence of the future Protestant King of England, it cannot, when coupled with the very unfortunate *contemps* in the Western Province, be without its significance to eye-witnesses whatever it may appear at the end of the vista of 3,000 miles, and that, moreover, despite his grace's repudiations of religious distinctions.

The Prince of Wales, however, has accomplished his tour, and the colonists of the Saxon race are pleased to have had the opportunity of showing how strong are the attachments to their mother country, and to the time-honoured institutions which have made England great, and her sons the freest people of the earth. But the gratification has not been without its alloy. Many loyal hearts have been sorely hurt. These remember how, years ago, when Britain's hands were full, the grasp she held upon her American colonies was anything but mild. They well could, and also might, have been angry at that occasion. Again, at a later day, when treason endangered British retention of the country, a small but noble band confounded the traitors, and sent them skulking into exile. Where the traitors now are, and how the faithful were rewarded, those who live in Canada can tell. It is a pity that incidents should have been during the Prince's visit, which would bring to the remembrance. That such have occurred there can be no question. The popular feeling in the Upper Provinces is that Protestantism has been smothered; that Imperial policy, as affecting the Canadas, is not a British policy, but a policy the effect of which is to make the more populous and valuable section of these provinces subservient to the anti-British Roman minority.

Few events are without their moral; and it would be strange indeed if one so important as the visit of the Prince of Wales to one of the first dependencies of the crown of Britain, should not afford deductions more or less affecting the future relationship of the North-American Colonies to the mother country. However crude the speculations upon the future may be, it is at least safe to say that the royal visit has not prolonged by one half-hour the connection it is so much the interest of all to perpetuate. The danger to this connection is seen and felt; why must it not be fearlessly expressed every day? There is no reason why it should be in a frigid ignorance of a well-known evil? No one explains the obscurity of the King's name in Orangeism; but every intelligent elector of Western Canada knows that, if the present union is continued, the predominance of Romanism or Protestantism must, at no distant day, have a very practical and most definite settlement. Let us look at the thing in this face. Canadian has a double house of representatives, not "a union in practice," but a partition in fact, a Siamese-twain legislature, which, when the one half says no, and the other yes, each half goes in for the spoils, and the expenditure is doubled. This is the pith of the "corruption," which the intuition or five days' experience of the *Tinian* correspondent failed to discover.

A better acquaintance with Canadian grievances would also have pointed out the east of penumbrous government—a Rebellion *Loose* Bill, which enriched men for being traitors, and made the loyal and faithful find the means; it would have directed attention to the sterling million paid by Upper Canada for the abolition of antiquated French feudalism over the soil of a Lower Canada—land and simple present of the *seignior*—the purchase money paid by the country to the seigniors. Will any one in his senses believe that such a scheme would be the voluntary act of the people of Upper Canada. But this is not the place for a catalogue of the differences of the eastern and western sections. It is the fashion, and a convenient one with many, to place every difference at the door of "the one and creed." But is this the true issue? It is true so far only as it affects the political status. Did men not seek to perpetuate a distinctive community—did it not seek to foster a nationality antagonistic to the spirit of liberal and progressive institutions—did it not nurture disaffection—did it not cherish the hope of future latent yet visible provocation of a conquered people, we could then believe that it inherited no hostility to the rule to which it owes so large a portion of gratitude. Private conversations with individuals, it may be said, are not to be taken as the manifestations of the popular mind. This may either be true or false. If the expressions of discontent by one of the workmen of a strike were to be taken as a proof of a general disaffection.

fection, the deduction might well be false; but if repeated conversations and mixing with the people of Naples had taught us to believe in the prevailing sentiment, our intercourse with the people would have led us to a similar conclusion.

We cannot but remember that the affairs of Europe were—as they still are—in the early part of last summer, most unsettled. About this period arose alarming conjectures respecting the Anglo-French alliance, the almost certain of a rupture, and the instant invasion of England. It is no exaggeration of the fact, nor is it any libel—except as truth may be so upon the French of Lower Canada to say, that to very many this critical conjuncture was a source of exultation and hope, not silently indulged, but openly expressed. To state that their aspirations are to see Canada reconquered by the French is neither to belie nor to exaggerate the "new"—or if it be the one or the other, this affirmation of their desire is not first in the field. M. Barthe, their compatriot, and recently a candidate for a seat in the Legislative Council, published, more than three years since, his "Canada reconquis." M. Barthe was on a visit to Paris, and, for reasons best known to himself, though possessing a press in his own Quebec, published his book there. About the same time a French ship of war was sent to Canada. The commander, M. Beloise, had instructions to make the agreeable, and see what he could. The following year a French consul was sent out, and is still resident at Quebec. No French merchant ship has, however, entered the port since his arrival; in fact, there is no direct commerce between the countries. The use of a resident consul in the person of a French baron is, therefore, to the unsophisticated people is supposed to honour something of an enigma; while to the astute magician of the Tuileries nothing can be more simply demonstrative.

The moral effect of the untoward incidents of the royal visit upon minds already influenced by circumstances, which these incidents have and tend to soften, will be a more full determination to resist the foreign element. That this will take a practical shape at the elections of the next summer, can be little doubted. These, again, or rather their advent will materially increase the majesty of the winter's session. What the opinion of the masses may be a few months' patient observation will discover. It is an opinion that has to be fought out, and, like most inevitable things, the sooner the unpleasant business is assailed the better.

CHANCERY AND TEMPLE BAR.

THE announcement that, of all the powers and bodies of this world, the Court of Chancery is destined to ride the metropolis of Temple Bar, has singularly delighted us. The relief comes from the quarter least likely to have given it. The old, obstructive, never-moving, or slowly-moving, Court of Chancery—the court that is trusted round and walled in by traditions, that narrow the path, and shut all sorts of gates against the progress of every thing and every man that had the misfortune to get into it—this great immovability, that hasty and hasty movement by the Court of Chancery into calling an anomaly and a nuisance, is the agent that is to destroy it, a full of obstruction in many respects resembling itself. "Like cures like," is an old medical maxim; but never will there have been a more accurate illustration of its truth, than the day when Equity, in full wig and robe, shall take the corner of Chancery-lane, and marching deliberately westward, level Temple Bar with its base.

It will not be the first edifice by any means that Chancery has laid in ruin; but in this case the public will hail its withering hand as that of a benefactor. The destruction of Temple Bar will be to the Court of Chancery like the "one deed she did" of the which Syracuse. For a single good action, done in despite of her nature, "they would not take her life." True it is, that Chancery will knock down Temple Bar for its own accommodation, not purposely for the public convenience; but the benefit will not be the loss. It will be a set-off on the good side of a long, a complex, and heart-breaking account. Some visible advantage will come out of the Fee Fund of the suitors in Equity at last. The Corporation of London, the Board of Works, commissioners of all kinds, who have power enough to turn our streets upside down, and make their back as if an earthquake had passed along every thoroughfare of the metropolis—none of these could or would touch Temple Bar; and now the Court of Chancery and its Fee Fund comes to deliver us!

Before leaving the structure to Lord Campbell and its fate, we would add a few words on the allusion to it in the new magazine that bears its name, and we hope will outlive it. In a recent article we said that Temple Bar was, as an edifice, "heavy, ugly, and hybrid." It is not the only ancient or historical association to compare with its incongruity. To this, or a similar assertion made by others, Mr. Sala, in his "Middlesex Travels"—the best paper in the number—thus alludes: "They sneer and say, there are no historical memories connected with there." And to prove there are some, yea, Macaulay's "Grand Ballad of Naseby Fight." Sergeant Obadiah, of Eton's regiment, does certainly not the "cavalier heads" of the cavaliers as "predestined to rot on Temple Bar." But Obadiah on Naseby field must have thought of the old city gate, not the present bar. The belief that the existing nondescript building is of venerable antiquity is rooted in the public mind, like a superstition; neither Mr. Tins or Mr. Cunningham—even the date carved on the stone—can shake the superstitious prejudice. As the belief proceeds undisturbed for the modern imposture, we wish to destroy the idea that the Lord Chancellor may demolish it without being accused of something next to sacrilege. The "old and original" Temple-bar was, like most of the city, constructed of wood; it was burned down in the great fire, and the existing masonry was one of the few failures of Sir Christopher Wren; it was not completed till 1671, more than a generation after Sergeant Obadiah, if he escaped the perils of Naseby fight, had gone, we hope, to a peaceful grave. The ballad, by Macaulay, is no authority for the antiquity of Temple-bar; say, the great historian may, in poetry, have cast into the general error, but he often had to correct it. Mr. Sala says:—"No memories, O Bar! Wren thus formed the background to Hogarth's crowning tableau to Butler's 'Hudibras,'—Burning Rump at Temple-bar." The winter is a more unfortunate witness to character than the poet. The "rump" of the Long Parliament had been turned out of the House of Commons many a good year before 1663, when Butler wrote his

satire—slaying the slain for the amusement of the restored King and his Cavaliers.

In placing his "crowning tableau" in front of the existing Temple-Bar, Hogarth committed an anachronism, quite unworthy of the "alde edifice" of this better-read age. No, we repeat it, Temple Bar is neither ancient nor respectable for its associations. The only "memories" it possesses are of an evil time, when it was the pedestal of a belated exhibition of human leads and limbs; political vengeance carried beyond death, by a display almost too horrible for African savages. This is not a "memory" that ought to save a nuisance from destruction. But the belief in Temple Bar is a strange proof of the obstinacy of a popular impression. No one ever imagines St. Paul's to be the old cathedral of London; but thousands are convinced that Temple Bar, the unhappy work of the same architect, is the ancient city gate!

There is one other little slip of Mr. Sala's pen that we cannot avoid correcting. Hamlet's fellow-student and friend, Horatio, does not perform the Japanese "happy dispatch" in the last scene of the tragedy that, Voltaire says, ends only because "everybody is dead." But Hamlet is the one exception. He lives, by Hamlet's particular desire, to explain matters, lest a "wounded lion" should "live behind him." The Prince's last words to Horatio are:—

"Alas! that from felicity awhile,
And in this hard world draw thy breath in pain,
To tell my story."

It is only eminent French writers who can be allowed to misquote and pervert Shakespeare uncorrected, they do so so completely, and with such a courageous ignorance.

MEN OF MARK.—NO. XI.

THE RIGHT HON. SIR E. BULWER-LYTTON, BART., M.P.

SIR E. BULWER-LYTTON is the Burke of the Conservative benches. His speeches are essays of political philosophy, abounding in law, antithesis, and the whole artillery of eloquence. He reserves himself for great occasions. When the Senate is deeply stirred upon some question, a rumour runs round the benches that "Bulwer-Lytton will address the House." Every seat is filled, and the listeners resign themselves to what is after all, however, only a chequered enjoyment. The orator's seat, in Opposition or in office, is on the front bench, usually next to Mr. Disraeli. The stranger in the gallery sees a tall, thin, attenuated figure come to the table. The face is pale, the eye speaking and intelligent, the hair abundant, on head, lips, and chin, but neither artistically arranged nor carefully tended; the attire careless, not to say shabby—*anatomia mensura ab infamia*, the "glass of fashion and mould of form," the youth of thirty years ago! The features are eminently aristocratic and intellectual. The hearty cheer that greets him is succeeded by respectful silence and strained attention, the reason for which is soon seen. Nature, so beautiful to him in oratorical gifts, has denied him the faculty of clear and distinct utterance. Now you miss a word, then a sentence. Sometimes those whom he catches a happy allusion, which is scarcely understood by those at whom the shaft is aimed, but who are separated from him by the speaker's table. Whether the defect be one of palate, or tongue, or lips, it would be no easy task to say; but those who say not opposite to him at public banquets, when he has harangued large audiences, have found it impossible to follow him throughout, although sitting in front of him at a distance of only five or six feet. To listen to Bulwer-Lytton is therefore one of the most tantalizing of oratorical enjoyments. All that is heard sharpens the rest to hear more. Of so carefully-considered and highly-elaborated an oration, you would not willingly miss one word. In moments of venation, with which admiration is largely intermingled, you ask yourself whether a Deosthenic regimen of pulchres and washes ought not to have been prescribed for the young politician? If any is heard, why not all? The singer who sings his words is made to practice with a cork between his lips. Why are inarticulate sounds so provokingly mixed up by this orator with subtle words of weight and wisdom which "give us pause," even when they do not carry conviction. His guests confirm you in the belief that this versatile genius never thought it worth his while to go through the drudgery of preparation for parliamentary and political life. He often gesticulates with his spine, makes low salutes to the door, and will neither learn grace from Disraeli nor dignity from Gladstone. Yet all these defects are swallowed up and lost in the pleasure which his brilliant sallies and pointed apostrophes produce.

A quaint old author says:—"The works of Xenius, Polyseus, and Phidias were much beloved by the fore-conceived opinion of the great skill these artificers had." See *Maritima Terrene Descent*. "This softness of passion of our sense," with Plutarch, "doth not alike move our mind when it is not accompanied by an opinion that the work is well and studiously performed." This vantage-ground our "Man of Mark" undeniably occupies. The Conservatives are proud of their most thoughtful and accomplished orator—the Liberals listen with generous sympathy and the disposition to admire. Sir Edward's greatest party-speeches were delivered, first, in defence of the Derby Reform Bill, and a year afterwards in opposition to that of Lord John Russell. On both occasions the House presented a strangely excited scene. His attacks upon political opponents (never exceeding the limits of fair parliamentary warfare) were eagerly caught up, and enthusiastically cheered. Nor were the crowded benches quite unimpressed by the value of certain admissions which so candid and enlightened a politician is sure to make; for Bulwer-Lytton remembers Charles James Fox and the Holland family in stating the arguments of his political opponents with so much force that it appears difficult, if not impossible, to answer them. Thus few speeches are made after him in debate which do not contain some allusion to the "magnificent oration of the right hon. gentleman the member for Herefordshire." They sit opposite are proud to break a lance with so renowned a knight; while his allies are glad to shelter themselves under the wings of his authority.

One of the happiest allusions in his Reform Bill speech of 1859 derived additional

force from the presence of the youthful Comte de Paris in the Diplomatist's Gallery. Sir Edward was quoting a sentiment of Mirabeau's, who said,—"In destroying an aristocracy of land you have made an aristocracy of money, which of all aristocracies is the most timid; you have made a democracy of large towns, which of all democracies is the most feeble." Every eye was turned to the loquacious figure of the French peer, and the expectation it may well be believed, that nothing of its effect from the presence of the youthful victim of a timid aristocracy and feeble democracy, who listened with lively interest and emotion. When the orator resumed his seat, he was rewarded by a cheer, frequently taken up and renewed after momentary intervals. Disraeli, the most generous and least envious of politicians, could not conceal his delight. He first thanked his brother novelist and brother minister, and then, unable to conceal his admiration, turned to his supporters on the benches behind to exchange his praise and congratulation with them. Sir Edward's speech last session on the Reform Bill of the present Cabinet secured the home quite as deeply, and won for the successful rhetorician increased fame.

Candour, however, has its disadvantages in party warfare, and Bulwer-Lytton's antagonists sometimes successfully join issue with him upon his own propositions conveyed in his own language. Thus in the debate on the Derby Reform Bill of 1859, or more accurately upon Lord John Russell's amendment, Sir E. Bulwer-Lytton put the issue in these words:—"Has the time come when it is safe to accept the principle that political power should begin to descend to the lower classes?" Sir James Graham, who followed in the debate, gave a frank answer.

"So challenged (he replied) I do not, for a moment hesitate to say that the time has come when political power should begin to descend to the lower classes." Liberal radicals turned the question and answer to good account at the next general election, perhaps without due attention to the context, for the Derby Reform Bill in its longer clauses and saving-bank qualifications had recognized the propriety of admitting the more intelligent and provident working classes to the franchise. An unfriendly note was also made of the right hon. gentleman's protest last Session against handing over political power to "poverty and passion," under which epithet he was held unjustly to stigmatize Lord John's £10 householders in boroughs. The germ of this speech will be found in "Bismarck." Speaking of the multitude, the author in his Notes says—"Their own passions are the real despots they should subdue, their own reason the true regulator of abuses."

Some critics, who we may be sure was inferior both in breadth and extent of knowledge to Bulwer-Lytton, having complained that he was superficial, it was well remarked that the industry which had made his learning so extensive might as easily have made it deep and profound had he chosen to restrict himself to one branch of study. This industry found ample employment when his Majesty intrusted the seals of the Colonial office to Sir Edward. A more painstaking, business-like, and indefatigable minister never entered Downing-street. The brilliant novelist shrank from no toil, and indeed undertook a good deal of drudgery which former ministers have been content to leave to subordinates. Our smaller colonies have long laboured under the conviction that they are handed over simply to some clerk or other in the Colonial office who "does" for them, and who being practically unknown and irresponsible, and making himself chiefly felt by a wanton interference with their desire to manage their own affairs, naturally comes to be regarded as a concealed prig. Lord Derby's Colonial Secretary manifested such a passion for work, and such an appetite for details, that he made himself cognizant of all that was going on in the smaller as well as more important dependencies of the Crown. Our colonies were already becoming conscious that a master-mind was at work, making its influence felt in every niche and cranny of the Colonial office, when a change of government occurred which diminished the zealous and assiduous Secretary of State to his literary pursuits.

Sir E. Bulwer-Lytton inaugurated a new social as well as administrative epoch in his dealings with the colonists. The laxest neglect and languor with which gentlemen holding high official positions in some of our most important colonies have been treated by some recent Colonial Ministers, would scarcely be believed. The Whig Hercules, who bled their seats in a Whig Cabinet through some fortunate relationship or intermarriage, are, in the House of Commons, humility itself. How deferentially they behave to opposition leaders, as who should say, "Do not make me the target for your arrows. See how modest and diffident I am—how unwilling to offend, how desirous to please!" See them turn aside to Mr. Bright, and the Liberals below the gangway! How gratified they are for the faintest cheer—how anxious to conciliate the Dagon of Radicalism! But your Whig Hercules, when he crossed the threshold of the Colonial Office, threw off all his humility, and with it the observance of social usages, may, even the forms of common politeness. Canadian ministers and Australian senators complained that they could not only obtain no social recognition from the Colonial Minister, but that they could not even get an interview to tell him that which it behooved him to know. Letters were unanswered—colonists of rank and standing were allowed to cool their heels in the ante-chambers of the Colonial Office, while the great man manifested the most contemptuous disregard for their time and convenience. It is impossible to describe the indignation engendered in the minds of gentlemen of standing and influence by this treatment, which can only be explained by a fear, on the part of the minister, lest the colonists should discover how very little he knew of the dependencies he had to administer. Sir Edward gave the coup de grâce to this halting system of rudeness and insult. He reformed it a privilege to learn all that a colonist of influence and position could teach him. Some Canadian ministers and high officials who happened to be in this country soon after his arrival, were received with marked *empressement*. The doors of the Colonial Office were open to them. When the minister could spare a few hours' leisure, the hospitalities of Kensington were dispensed with winning ease and cordiality. These gentlemen returned to Canada charmed with their accomplished host, and disposed, it need scarcely be added, to put the most favourable construction upon the acts of a minister whose intelligence, fairness, and candour, they had themselves had an opportunity of sounding,

in the unreservedness of social and friendly intercourse. Let no one deem these courtesies unimportant. In periods of emergency, a colony might be preserved or lost, as some influential official arrived fresh from the urbanity and hospitality of a Bulwer-Lytton, or smarting under the superciliousness of a Labouchere—in both Houses of Parliament, the mildest-mannered, and most deprecating of men.

Dr. Johnson said of some one, that he was "a satisfactory concomb." Such was the Pelham of our youth, and such were those who dressed themselves in his guise, and aped his versatility. Most men who are worth anything pass through a stage of dandyism, which, in the young man, often indicates neatness, precision, cleanliness, and self-respect, run a little to excess, if you will, like mint in the housewife's garden. Right wisdom, philosophic observation, enlarged experience succeed, and then it becomes the most natural thing in the world for the pencil that dashed off "Pelham," with his foppishness and affectations, to paint the calmer and more enduring pleasures of home and the delights of learned leisure as we find them portrayed in "The Customs" and "My Niece." The difference is great, but not greater than that which separates the impulsive Cambridge student from the grave statesman and the successful minister. The charm had been bridged over by a series of ardent and pious of rare architectural beauty. First he gave the world the fashionable novel, then the romantic and incidental, then the sentimental, and then the historical. The transition, lastly, to the domestic novel, was both natural and consistent.

But, while the novelist has been growing wiser, has not the world progressed somewhat? In 1847 he said, in "Alice, or the Mysteries"—"If a man is called a genius, it means that he is to be feared out of all the good things in his life. He is not fit for anything but a game." Put a *genius* into office! make a *genius* a bishop! or a Lord Chancellor!—the world would be turned topsy-turvy! You see that you are quite astonished that a genius can be even a county magistrate, and know the difference between a spade and a poker! In fact, a genius is supposed to be the most ignorant, impetuous, good-for-nothing, do-nothing sort of thing that ever walked upon two legs. The world is so fond of that drab habit the hare and the tortoise, it really believes that because (I suppose the fable to be true) a tortoise once beat a hare, that all tortoises are much better runners than hares can possibly be. Medicine men have the monopoly of the knives and fisher; and even when talent does rise in life, it is a talent that only differs from mediocrity by being more energetic and bolder." The public of the present day have seen a Cabinet of which two men of genius were not the least honoured and influential members; while the author of "Alice" may be felicitated upon having shown his countrymen that a man of genius may be something higher than a county magistrate, may, indeed, discharge the loftiest functions with as much assiduity as the meanest pedagogue, and may aspire to fill the highest offices in the State.

If in this brief sketch we attempted to estimate Sir E. Bulwer-Lytton's rank among his contemporaries, we should be tempted to adopt Lord Byron's high eulogium upon Sheridan—"Walter Sheridan has done, or close upon it, has been, *par excellence*, always the best of his kind. He has written the best comedy ('School for Scandal'), the best drama, the best farce ('The Critic')—it is only too good for a farce, the best address (Monologue on Garrick), and, to crown all, delivered the very best oration (the famous Begum Speech) ever conceived or heard in this country." Sir E. Bulwer-Lytton has exhibited accomplishments and excellences infinitely more versatile and scarcely lower in degree. He has written not simply the best novel of the nineteenth century, but half-a-dozen of the best, and of a character the most variously contrasted. He has written the best political satire of his day (the "New Timon"). If there is any more favorite modern drama than the "Lady of Lyons," or a play containing a more effective stage situation than "Richard III." we have yet to learn its name. He has written the best political pamphlet of the century. He has given us the best translations of many of Goethe's poems. If we do not, indeed, accord him a high place on Parnassus, it is not that he is deficient in "the vision and the faculty divine." He has imagination, fancy, invention; but Nature has cruelly denied him a true musical ear, and the natural defect is as little to be overcome as the imperfect and capricious utterance that condemns in indistinctness some of his noblest declamations in the senate. "To crown all," in the words of Byron, it will scarcely be questioned that he has delivered two of the very best orations that have been heard in the House of Commons since he returned to it in 1852. The minds of Sheridan and Bulwer-Lytton may differ as widely as the brilliant diamond and the glowing and iridescent opal. But the parallelism between the two men in their successes is not, we venture to think, ill-sustained, the advantage in the Goethe faculty of many-sidedness being wholly with the great novelist.

In estimating both the intellectual character and writings of Bulwer-Lytton, we must take Byron for a more accurate comparison. It has been truly said—although some years have elapsed since the criticism was penned—that "even the circumstances of their private lives are strikingly similar." Their relationship, however, their great dependence, in early years, upon a mother, their unfortunate matrimonial connection; their attachment to a daughter, in both cases, though from different causes, frustrated; their personal vanity, warm temper, and egotism; even their noisiness in Parliament [the writer must have forgotten Bulwer-Lytton's exertions in favour of dramatic copyright, and the reduction of the newspaper stamp to one penny, effected by his instrumentality]; also, sundry high and generous qualities and feelings which have modestly distinguished them both. And those peculiarities of life and disposition have tinged the prose of the one and the poetry of the other. Each has shown a morbid desire to put on a student, and be the hero of poem or tale. ("Childe Harold," "The Rival Poets," &c., are vehicles for the personal conceits of their authors; "Pelham," "The Student," &c., are self-indulgences of their author. This habit is incompatible with attaining the high highest step which poetry is entitled to reach. Byron was cut off before he became wise; but, as Johnson said of Goldsmith, we predict that Bulwer-Lytton is "coming right, for Lis works seem to be acquiring that breadth and depth which can make them worthy of coming from a great master

of the English tongue." The critical faculty was not at fault in this prophecy.

The self-imposed devotion and perseverance which have accomplished such mighty tasks, may not be accurately estimated unless we remember the gnawing cares and bitter humiliations which have been of late years heaped upon him. Domestic affections, poisoned in their source, the chalice of gall and wormwood, continually commended to his lips, have been the bitter drink of him who, in happier times, thus described, in "Allen," the use and glory of the afflictions:—"The men who are most happy at home are the most active abroad. The animal spirits are necessary to beautiful action; and dejection and the sense of solitude will turn the stoutest into dreamers. The hermit is the antipodes of the citizen; and *an gola antedrae* and *inspire us like the Loves*." How Bulwer-Lytton's household gods have frowned and looked askance as the Muses have smiled benignantly upon their votary, none require to be told.

Novelist of three decades, poet, dramatist, pamphleteer, satirist, magazine-editor, political philosopher, orator, minister of state! Who of living men can match the career of our "Man of Mark"? or how can we more fully dismiss him to the balmy air of the southern isle which he has chosen for his winter home than by quoting that noble and elevating passage in "Ernest Maltravers," in which the man who has done, written, thought, and suffered so much has given us a glimpse at the future state of ever-renewed progress and activity towards which his own thoughts and aspirations characteristically tend?

"The home of a spirit is wherever spreads the universal presence of God; and to what numerous states of being, what pads, what states, what active and glorious tasks in other worlds may yet be reserved? Perhaps he knows and shares them together, and mounts as often after age higher in the scale of being. For surely in heaven there is no pause or torpor; we do not lie down in calm and unimprovable repose. Movement and progress will remain the law and condition of existence; and there will be efforts and duties for us above as there have been below."

THE ETHNOLOGICAL SOCIETY.

THE INDO-GERMANIC THEORY.

At the Ethnological Society on Wednesday night, Mr. Crawford, the late Governor of Singapore, read an elaborate and most ingenious paper on the Indo-Germanic or Aryan theory, in which he endeavored to show that the enthusiastic scholars who have in our own times founded the science of comparative philology, intoxicated with the partial success of their inquiries, have mistaken wild hypotheses, the mere creation of their fancy, for scientific truths, elaborated by sound inductive research.

Varied and profound as is the scholarship necessary to prosecute original investigation in the field of philology, one of the most eminent living writers on the subject asserts, that any one attempting the ordinary acquirements of a cultivated Englishman, may, by the perusal of the works of Bopp, Benzen, or Max Müller, convince himself, without much labour, that the startling announcements made by recent scholars concerning the common origin of the Indo-Germanic languages, and of the Greek, Scandinavian, and Hindoo mythologies, regarding the identity of the various peoples and domestic animals were made subservient to the uses of man, and regarding the habits of the Aryans, an early people who were the common ancestors of the leading races of Europe and India, are based upon well-ascertained facts, which render the conclusions of philology as certain as the most generally-admitted truths of astronomical or geological science.

In Europe, within the historical epoch, new languages have grown out of forms of speech from which they widely differ. The Italian, Spanish, French, and Wallesian have been formed from the Latin, while English and the modern German and Scandinavian dialects have sprung from older Teutonic forms of speech. Knowing something of the parent tongues in both cases, we have thus means of examining languages which have undergone great changes within a well-known period, for the purpose of ascertaining their laws of formation, development, and decay. Just as the geologist has studied the changes that are taking place in our own epoch, and explained their aid the phenomena of the geological past, so the philologist has traced the crumb of the globe, so the philologist has interpreted the phenomena presented by old deposits of language. By means, indeed, of the general rules arrived at from the careful study of European tongues, dead and living, wonderful results have been achieved. We know the modern speech of Persia, we are acquainted with the Sanskrit which it speaks, and the remote and widely-distant epochs in the same geographical area. Given the modern languages and these fragments, a problem placed before philologists was to reconstruct the old dialects by the laws of inductive linguistic research; to invent their grammar and write their dictionary, and so to obtain a key to illegible old texts and inscriptions. How the problem was solved we need not say. The reconstruction of the old languages of Persia, is one of the greatest triumphs of the age. When these languages were proved in this way to grow out of each other, when their resemblance to Sanskrit, the old Indian dialect, was perceived, and when European scholars came to compare the older forms of the Germanic, Slavonic, and Lithuanian languages with the ancient Aryan dialects, they ascribed an inextinguishable *lume* that they all bore to each other resemblances akin to those which the languages of southern Europe bear to Latin. The inference of course was, that they all spring from a common source. They were described as the Indo-Germanic languages—while the speculation which attributes to them a common origin, received the name of the Aryan theory. Now to this hypothesis, Mr. Crawford is altogether opposed. Those who maintain it, he says, hold that when such domestic relations, as those of fathers, mothers, brothers, and sisters, and such visible bodies as moon, air, sky, water, and earth, are referred to by really cognate words, an affinity between the several languages is strongly indicated. He entertains a very different opinion.

"My own experience," he said on Wednesday, "of the few languages to which my inquiries have extended, has led me to the conclusion the very reverse of that arrived at by the advocates of the Aryan theory; and I am satisfied that the words which a rude people borrow from a civilized one with which it holds intercourse, are naturally and necessarily those expressing the most familiar ideas. I am

convinced, indeed," he added, "that this is generally the source of that agreement in words which is genuine and not fanciful, and on which the theory of a common language and a common race has been founded."

There are two words which are generally thrust forward into the first rank of the Aryan theory. These are "father" and "mother," terms which, in every tongue, are essentially the same.

"In their earliest stage," Mr. Crawford observed, "they are always monosyllables containing a initial for a consonant, and the simplest breathing for a vowel, the consonants being m, p, b, v, f, and the vowel a. This arises from the perfection of the infant's lips for the purpose of intonation indispensable to its life, while the action of the ordinary muscles of voluntary motion connected with functions that are not indigenous to the human structure does not enter into the period when the Hindu religion was introduced among the natives.

"The most cultivated of the insular languages," he said, "contain a considerable portion of it, and this with very slender corruptions, and by no means in the dubious form in which it is attempted to identify words of the languages of ancient and modern Europe with a dead language of Central Asia or India. Many of these Sanskrit words express the most familiar ideas of man, and although they generally appear, along with native terms, are often of more frequent use than the latter; in some cases, indeed, even superseding them altogether."

No one has thence inferred that the Malay languages have been developed from the Aryan tongue, and Mr. Crawford's conclusion, therefore, is that the Indo-Germanic theory is utterly groundless, the mere dream of very learned men." Yet no one inferred that the subject of the paper were an interesting discussion into which the essayist entered, regarding the extent to which language should be accepted in ethnology as a criterion of descent, and incidental remarks, in which he showed that many words in the Celtic languages, supposed to be of principal Aryan origin, may have come directly from the Latin. We need not, however, follow him in his arguments on the subject, the conclusions to which they lead being generally adopted by the soundest philologists; who, although familiar with the phenomenon of language superseding language, without race superseding race, as in the district of Galloway, in Scotland, and ready to admit that the Celtic deposit of speech is Teutonic rather than Indo-Germanic, and long anterior in formation to Sanskrit or any European tongue; yet hold that a great chain of cognate languages extend from Spain to Bengal, which bear to each other a relationship akin to that subsisting between the English, Dutch, Danish, Icelandic, and German.

THE GEOGRAPHICAL SOCIETY.

THE ANTARCTIC REGION.

At a meeting of the Geographical Society held last week, Captain Maury, the distinguished superintendent of the National Observatory at Washington, delivered an interesting address on the subject of the Antarctic region, with the clearness and felicity of illustration which characterize his printed works, explained what may be inferred from well-ascertained scientific data concerning the natural phenomena of the unexplored area surrounding the south pole. "Why," he asked, "should a part of the earth's surface, so vast in extent, be so long reserved to a country in the interior of one of Jupiter's satellites?" The question reminds us of an answer given to an enthusiastic naturalist under somewhat similar circumstances. At a time when geology was a young science, this gentleman undertook to prepare a section of the strata in a northern country. He asked, in the course of his investigations, for permission to descend into a coalmine, but, to his surprise, the application was refused. "It is of no use," said the manager of the colliery, "you may conceive it all. Imagine your own coal-cellar lengthened into a vista, with a few chimney-sweeps sitting before farthing candles at the far end, and you have a perfect idea of what is to be seen underground. What more could you desire?" A very similar reply was made to Captain Maury, by those who should know better, when he urged the importance of antarctic exploration. "The phenomena of the south polar regions," they say, "are simply the phenomena of frost and snow. Things are the same at the south and at the north pole, for the same causes must produce the same effects at the opposite ends of the globe. 'This being the case, why affront the dangers of exploration amid icebergs, glaciers, and snow-fields, which merely repeat the scenes so familiar to us in the arctic regions?' Now the geologist who wished to descend into the coal-pit, had objects in view, not dreamed of in the philosophy of his practical friend the coal merchant, but with Captain Maury's case, he has descended into a coalmine, further exploration, little known to the general public, and in his address to the Geographical Society he explained these. Speaking to the members of a learned society, he necessarily assumed in his hearers an amount of geographical knowledge greater than that possessed by most of our readers, and in endeavouring to popularize his views, we shall therefore be our own language and illustrations."

On examining a terrestrial globe, we may see at a glance that all the great masses of land lie in the northern hemisphere, while a great expanse of waters covers that half of the earth's surface which lies south of the equator. In the old maps and globes an attempt was made to represent the unknown parts of the south polar pole and the arctic circle. It is not so, however. A continent or an archipelago exists within this area. The darkened surface in the centre of the annexed chart exhibits the space which has not yet been explored. Its superficial extent in round numbers is 9,000,000 of square miles. The superficial extent of Europe is only 3,700,000 of square miles. These parts of the line of farthest exploration, which are coast, and whose which are merely the edge of pack-ice, or open sea, will be best distinguished by a brief indication of the chief attempts made to penetrate into the mysterious regions beyond the antarctic circle. The exploration of the antarctic sea may be said to have begun with M. de Kerguelen in 1772. This French officer attempted to land on the island which still bears his name, but did not effect his purpose, in consequence of the tempestuous character of the weather. Returning to Europe, he announced the discovery of land in 50° S. lat., which he did not hesitate to describe as part of a great continent overreaching the whole of the antarctic zone. In the following year Captain Cook descended towards

troop in upon the startled sight as thick as the crowds at Charing-cross on Lord Mayor's Day. Most of these spirits are evidently frank and fearless. They come in broad daylight, and, indeed, seem to prefer paying visits in the forenoon. How unlike the diabolical spirits of our time, who insist on a chamber's being reduced to utter darkness before they will condescend to begin their performances!

As regards these spirits Dr. Dee is exceedingly circumstantial, and occasionally exhibits pictorial powers of a remarkably kind. Modern mediums, when introducing spirits to our notice, most frequently appeal to the ear alone. At times they attempt also to satisfy the senses of touch, and to win belief through the eye. But the doctor gives us clear notions of the faces, forms, voices, dress, deportment, character, &c., of his visitors. You have spirits black, white, and grey; spirits fair and spirits foul; spirits "fast" and spirits "slow"; eating spirits and drinking spirits; spirits with three faces, like the famed Gorgon, and spirits who, like the old Mercury, have wings attached to their heads, and feet, and shoulders; there are spirits who are dressed up in the height of the fashion, and spirits as innocent of clothing as Adam and Eve before the Fall; there are child-spirits in long clothes of white silk, and pretty young ladies in gowns of green and red, and poor forlorn old maids in scarlet "petticoats"; there are gentlemen spirits in "short coats," gentlemen spirits in black velvet robes, and gentlemen spirits in rags; there are spirits who assume in succession all the colours of the rainbow; there is one notable female spirit who occasionally turns herself into a table, or a three-legged stool, and soon after returns again to the form of a divine; there is a male spirit, who after feigning himself by dancing, applies water to his head, and neck, and arms, when, lo! and behold! he is straightway transformed into a fair lady; and lastly, there is the most wonderful spirit, which moves about within the head of Edward Kelly as he is seen by the following passage from Dr. Dee's diary:—

"Edward Kelly yesterday had a show of a little thing as big as a pease of fire as it were in the stone going about by the brinks. And because it was in shape human, he of purpose would not declare it to me, and so I have noted it as no show. This he told me on Tuesday night (that was yesterday), upon occasion of a great stir and moving in his brains very sensible and distinct, as of a creature of human shape and lineaments going up and down to and fro in his brains, and within his skull, sometimes seeming to sit down, sometimes to put his head out of his ear."

The spirits who move about in the show-stone converse freely with Dee and Kelly. Many of them exhibit much refinement of manner. There are not a few, however, whose your fine fashionable folk would pronounce to be utterly unrepresentable in a drawing-room. With respect to educational acquirements, you find that many of the spirits, both male and female, possess some knowledge of geography and history, and that several have a smattering of Latin. And there is one pretty spirit maiden amongst them, who is learning Syriac and Greek. On the whole, however, your vanity is largely ministered to by the conviction that these angelic beings of the age of Elizabeth are not so greatly superior in ability, learning, or breeding, to the spirits of the present time, and the late contemporaries of the days of Victoria, who so obligingly return to earth in order to rap out names by a letter at a time, to the true lovers' knots under round tables, to administer ghostly counsel to sick maids, to prescribe chamomile tea for disordered bodies, to denounce unbelievers, logic, and pork-chops.

Of the spirits who appear in the show-stone, between twenty and thirty are introduced to us by name. Of the female spirits, the most remarkable are "Ath," "Finis," and "Madini." The male spirits number amongst them such celebrated spirits as the Archangel Michael, and the angels Uriel and Gabriel. Thus there is one spirit with the simple appellation, "Ben," another who answers to the name of "Jam," and a third bearing the uncouth designation of "Lundrungruffa." The female spirits, we feel bound to say, are, beyond comparison, the sprightliest. Ath is described as having on "a red kirtle, and above that a white garment, like an Irish mantle, or her head a round thing like a garland, graven and carved and set with the round, precious stones on her breast and back." On Dee's making some reference to the precious stones, this lady smartly exclaims, "What! do you think I am a jeweller's wife by my apparel?" With Dee the spirit Finis has a stout controversy about the character and position of women. The Doctor goes on saying of Trithemius that, "never any good angel was read of to have appeared *forma mulieris*." Upon this Finis fires up vehemently, and learnedly declares that, "as in both you read *Homo*, so in both you find one and the selfsame dignity in internal matter all one." She clinches the point by reminding Dee that "true wisdom is always painted with a woman's garment." The Doctor, however, is silenced.

But of all the spirits commended us to pretty little Madini, whom we beg to introduce to the reader as she appeared in the conjuring room.

"Suddenly, there seemed to come out of my Oratory, a *Spiritual creature*, like a pretty girl of 7 or 9 years of age, attired on her head with her hair rolled up before, and hanging down very long behind, with a gown of grey . . . changeable in green and red, and with a train she seemed to play up and down . . . like, and seemed to go in and out behind my books, bring me books, and suggest . . . as she should ever go between them, the books seemed to give place sufficiently . . . one heap from the other, while she passed between them. And so I considered and . . . the diverse reports which E. K. made unto me of this pretty maid and . . .

"A. I said . . . Whose maid are you?"

"Sh. Whose man are you?"

"A. Verily. You shall be beaten if you tell."

"Am not I a fine maid? Shall I leave to play in your house, my Mother told me she would come and dwell here."

"A. She went up and down with most lively gestures of a young girl playing by herself and diverse times another spoke to her from the corner of my study by a great Trithemius, but none saying of Trithemius, she herself."

"Shall I? I will [speaking to one in the asforesaid corner]."

"A. Tell me who are you?"

"I pray you let me play with you a little, and I will tell you who I am. . . .

A Gentleman Kelly is in a "Short Coat," from a sketch by Dr. Dee.

I am a poor little maid, Madini, I am the last but one of my mother's children, I have little baby children at home.

"A. Where is your home?"

"Ma. I dare not tell you where I dwell, I shall be beaten."

"A. You shall not be beaten for telling the truth to them that love the truth, to the eternal truth all creatures must be obedient."

"Ma. I warrant you I will be obedient. My sisters say they must all come and dwell with you."

"A. Your eldest sister her name is Esmedil."

"Ma. My sister is not so short as you made her."

"A. O! I cry you mercy. She is to be pronounced Esmedil."

Amongst the most regular male visitors is the Archangel Michael. On his first appearance he is altogether wingless; but his nether limbs, we are told, are covered with feathers. After a time, however, his shoulders display the usual angelic appendages. The Archangel seems to have a sense of the value of gymnastics. He is represented as amusing himself occasionally by flinging golden trenchers up into the air, somewhat after the manner of modern street jugglers. Once he strips a man of his clothes, and "leaves him, as it were, only in his shirt." As a consequence, probably, of all this vigorous exercise, Michael sometimes appears before you in a profuse sudation. He is very loquacious in the Archangel, very commonplace at times, like most of us mortals, and occasionally, we must say it, exceedingly obscure.

However, he makes Dr. Dee present of the magic ring, "where-with all miracles and divine works and wonders were wrought by Solomon."

The ring is of gold. The letters on its seal, P, E, L, E, form one of the names of a dread supernatural being.

The angel Uriel, who presented Dr. Dee with the "Crystall Globe," is also a frequent visitor. Amongst other valuable services, this angel reveals to the great Medium the evil designs of the bad spirit Lundrungruffa, who, it seems, has been planning the destruction of Dee, his wife and children. (Discharge him [Lundrungruffa] to-morrow with brimstone!") Such is the fiery advice of Uriel. But by to-morrow the friendly angel has made up his mind to take the business into his own hands. How Uriel decided to act in this matter, and all that he did, is it not written in the handwriting of Dr. John Dee, in "Doctoris Dee Mysterium Libri Quinque," in the Sloane Collection of Manuscripts, in the library of the British Museum?

For the gratification and enlightenment of the eager reader, we transcribe these most interesting details:—

"1582, Martii 11.

"Bonday, a Monday here & circiter.

"A. Uriel being called by E. T., there appeared one clothed with a long robe of purple all spangled with gold, and on his head a garland or wreath of gold: his eyes sparkling . . .

"A. Are you Uriel?"

"Then presently came in one and threw the brave spirit down by the shoulder and beat him mightily with a whip; and took all his robes and apparel off him, and there he remained all hairy and ugly, and still the spirit was beaten of him. And that spirit which he beat him said to the hearing of my scribe (or none), so thus the wicked occurred."

"A. Are you Uriel who speaketh that?"

"UR. I am I, write down and mark this for it is worthy of the noting."

"This was that persecutor Lundrungruffa. I brought him hither to let thee see how God hath punished thy enemy."

"E. T. He drew the wicked spirit away by the legs and threw him into a great pit, and washed his hands, as it were, with the sweat of his own hand for he beat me all in a sweat."

"After these particulars, the reader will not dislike a peep at the "Governor," not only of Lundrungruffa, but of "all enchanters, conjurers, witches, and evil spirits."

The engraving is from a sketch by Dr. Dee himself.

Soon after the horwshiping of Lundrungruffa, the confederates, Dee and Kelly, contrived to turn their dealings with the spirits to practical account. In 1583, it happens that a certain Count Albert Laske, a Polish nobleman of large property, visited England for the purpose of beholding the glory and magnificence of the court of Queen Elizabeth. Having heard much of Dee's wonderful colloquies with the "spiritual creatures," Laske was anxious to make the acquaintance of the Doctor. He was introduced to the great alchemist and conjurer, who asked him to dinner, and excited his curiosity to an amazing extent with narratives of the sayings and doings in the "crystall globe." In Dee's diary for the 25th of May, 1583, we find the following curious entry:—"I [John Dee] and E. K. [Edward Kelly] went together, reversing of that noble Polonian, Albertus Laske, his great honour here with us obtained, and of his great liking among all sorts of people."

"No doubt," remarks the author of "Extraordinary Popular Delusions," on this sentence,—"they were discussing how they might make the most of the

The "Governor" of the "Evil Spirits" from the drawing in "Laske's Quinquage."

noble Poleman." The speedy success of their plans is thus told in the book referred to:—

"With such tales as these they lived on the Pole from day to day, and at last persuaded him to be a witness of their mysteries. Whether they played off any optical delusions upon him, or whether by the force of a strong imagination, he deluded himself, does not appear; but certain it is that he became a complete tool in their hands, and consented to do whatever they wished him. Kelly, at these interviews, placed himself at a certain distance from the wondrous crystal, and gazed intently upon it, while Dee took his place in a corner, ready to set down the prophecies as they were uttered by the spirits. In this manner they prophesied to the Pole that he should become the fortunate possessor of the philosopher's stone; that he should reign for centuries, and be chosen king of Poland, in which capacity he should gain many great victories over the Saracens, and make his name illustrious over all the earth. For this purpose it was necessary, however, that Laski should leave England, and take them with him, together with their wives and families, that he should treat them all sumptuously and allow them to waste for nothing. Laski at once consented, and very shortly afterwards they were all on the road to Poland."

THE WEATHER IN NOVEMBER.

The weather during the month of November was dull and gloomy; the sky was generally overcast, the temperature low, and the air very humid. The following are the particulars of each element:—

The barometrical reading, at the level of the sea, on the 1st day was 30.01 in.; it increased to the highest reading in the month (30.54 in.) on the 7th; it then decreased, day by day, to the lowest, 29.28 in., by the 17th, and continued varying about the point 29.5 in. till the end of the month.

The mean for the month was 29.88 in., and which is 0.06 in. below the average for November.

The thermometer, in the shade, attained its highest point (55°) on the 1st day, and its lowest point (28½°) on the 3rd day.

The mean highest day temperature was 46½°, and of low night temperature was 35¼°; and both these elements were 2½° below their averages, and therefore both the days and nights in November were cold.

The mean daily temperature of the air reached its average on five days only, and was deficient on twenty-five days, frequently at the beginning of the month to 4°, 5°, and 6°.

The mean temperature of the air for the month was 40½°, which is 2½° below the average of the same month in forty-three years.

The degree of humidity of the air was seldom below 90°, and was often as high as 95°, and on some days reached 100°, representing complete saturation. Indeed, throughout the month the atmosphere was loaded with moisture. The mean degree amounting to 93½°, exceeding the average by 4°.

The proportion of wind was N. 6, E. 13, S. 5, and W. 5. By Robinson's anemometer, the horizontal movement of the air was about 180 miles daily. There were no strong winds during the month.

Rain fell on eleven days to the amount of 2½ inches, being 1.10th of an inch above the average for the month. The fall of rain in this year amounts to 29½ inches.

JAMES GLAISHER.

ASTRONOMICAL PHENOMENA IN DECEMBER.

DURING the whole of this month there will not be any particularly interesting phenomena. There will be no eclipses of the sun or moon; no occultation of large stars, nor any particularly interesting position of planets.

The Sun rises at about 8 o'clock, and sets before 4, therefore the days are less than eight hours in length.

The Moon will be new on the 12th, and full on the 26th; and in her monthly course she will be near the planet Mars on the 19th; which planet will be due west at 26 minutes after 5 in the evening, and about four minutes afterwards the Moon will pass the meridian.

On the 21st, at 1h. 51m. p.m., the Sun enters Capricorn and winter commences.

On the morning of the last day, the Sun will be at the least distance from the earth during the year.

During the month Venus is a morning star; Mars is an evening star, and visible till about 11h. p.m.; and Jupiter rises, on the first day, at 10h. p.m., and on the last day, at 7h. 58m. p.m., and at proportional intermediate times between those days, and afterwards is visible throughout the night. On the last day this planet and the Moon are near together.

NECROLOGY OF EMINENT PERSONS.

BARON DE BUNSEN.

On Wednesday, the 26th ult., at his residence, Bonn, his Excellency Baron de Bunsen, late Prussian Minister at the Court of St. James, in his 70th year. The deceased Baron was one of those learned men who have been enabled, by a concurrence of fortunate circumstances, to join together the pursuits of literature with the duties of a busy and active life, and what is more, a person who owed his advancement, reputation, and wide influence to his own exertions. He was of humble extraction, and was born at Gorbach, in the small German Principality of Waldeck, in August, 1791. Having studied under Heyne, at Göttingen, and obtained a name for his good scholarship, which was increased by the publication, in 1813, of an essay "De Jure Hierosolymitano apud Athenienses," he went to Paris, and thence to Rome, with the view of perfecting himself in Sanskrit and Eastern literature. Whilst there he attracted the attention of Niebuhr (then Secretary of the Prussian legation in the Eternal City), to whom he became private secretary, and whom he eventually succeeded in his official post. He now gave great weight to the pursuits of literature, his first work being one on the "Topography and Antiquities of Jerusalem." He also interested himself in the hieroglyphical researches of Champollion, and was mainly instrumental in inducing the *savants* of Berlin to follow up that branch of study, and more particularly in

directing towards it the rising talents of the great Egyptologist, Lepsius. In 1822 the then king of Prussia became personally acquainted with the merits and ability of his minister, and from that time forth he continued to be his firmest friend. As Prussian Minister at Rome, Bunsen took an active part in the establishment of Protestant worship there. In 1839 he resigned his diplomatic post, on a difference arising between the Court of Berlin and the Vatican, upon a question of ecclesiastical right in the Prussian States. After a visit to Munich and to England he was again sent on diplomatic employ in 1839 as ambassador to the Swiss Confederation; and in 1841 he was sent to London as accredited representative of his sovereign at the Court of St. James's, where he remained until the approach of the outbreak of the war with Russia forced him to retire. In London, and indeed all over England, he mixed much in society, and made his influence widely felt in the highest circles, and even with Royalty. As one of the most distinguished and able of philosophic thought, and as one of the most enlightened and far-seeing of statesmen of the day, his name will long live in England, more than one of his children have permanently made their home. One of his sons, having graduated at an English university, became tutor in the family of the Duke of Sutherland, who presented him, a few years since, to the valuable rectory of Littlehampton, near Newport, Shropshire; and one of his daughters is married to J. H. Batterley, Esq., of Stoke Park, near Bristol, late High Sheriff of Cardiganshire. During the six years which have passed since his retirement from public duties Bunsen lived at Bonn, devoting himself to his favourite studies, to the Catalogue of his works will be found in the new edition of the "English Cyclopædia," the most important and the best-known of them are, "Hypotyposis and his Age," "The Life and Letters of B. G. Niebuhr," "The Epistles of Ignatius, with annotations," "The Basilicas of Rome viewed in Connection with their Architecture and History," "The Constitution of the Church of the Future," "Christianity and Mankind," and "Egypt's Place in Universal History."

COLONEL CHARLES FRANCIS ROWLEY LASCELLES.

On Sunday, the 18th ult., in Grosvenor-street, aged 64, Colonel Charles Francis Rowley Lascelles, formerly of the Grenadier Guards. He was the son of the late Rowley Lascelles, Esq., by Elizabeth, second daughter of the late Sir Charles Gould Morgan, Bart., M.P., and aunt of Lord Tredgower. He was born in 1797, and entered the army in 1812, and served with the 1st regiment of Guards in the Peninsula in the campaigns of 1813-14, and has received the one medal and two clasps for the battles of Sivilla and the Nive. He served also in the campaign of 1816, including the battles of Quatre Bras and Waterloo, and the taking of Paris. Colonel Lascelles, who represented a branch of the family of the Earls of Harrowood, lived and died unmarried.

RICHARD RICHARDS, ESQ.

On Tuesday, the 27th ult., at Ceyrebeck, Merionethshire, aged 78, Richard Richards, Esq., late M.P. for the county of Merioneth. He was the eldest and last surviving son of the late Right Hon. Sir Richard Richards, formerly Chief Baron of the Exchequer, by Katharine, daughter and heir of Robert Vaughan Humphreys, Esq., of Ceyrebeck. He was born in 1782, and educated at Westminster and Christ Church, Oxford, where he graduated B.A. in 1810, and proceeded M.A. in 1812. In the same year he was called to the bar at the Inner Temple. In 1820 he was appointed Accountant-General of the Court of Exchequer, and one of the Masters in the High Court of Chancery in 1841. Mr. Richards was a magistrate and Deputy-Lieutenant for Merionethshire, and represented that county in the Conservative interest from the month of April, 1848, till he finally retired from political life at the dissolution of 1852, when his place was supplied by Mr. W. W. E. Wynne. He was very popular, both in the House of Commons and in legal circles, where he was generally known by the familiar sobriquet of "Double Dick." It is allusion, not to his nature, but to his name. According to the "County Families," Mr. Richards married, in 1814, Harriet, daughter of Jonathan Denon, Esq., by of whom he has one son, and one daughter. His eldest son, is Mr. Richard Richards, barrister-at-law, and formerly student of Christ Church, Oxford, who was born in 1821, and married in 1845, Elizabeth Emma, daughter of William Benett, Esq., of Faringdon House, Berks.

DOWAGER LADY TRIMLESTON.

On Sunday, the 24th ult., aged 87, at Stanton Place, near Ludlow, Alicia, Dowager Lady Trimleston. Her ladyship was the second daughter of Lieutenant-General Charles Eustace, of Dublin, and sister of the late Lieutenant-General Sir Wm. Cornwallis Eustace, K.C.H., C.B., and of Major-General Sir John Rowland Eustace, K.H., of Ballymore, county Kildare, formerly high sheriff of that county. In 1797 she became the second wife of Nicholas, 14th Lord Trimleston, in the peerage of Ireland, who had her a widow at his death, in 1813. She married, secondly, Lieutenant-General Sir Ryan Lloyd, K.C.H., of Ferry Hill, county Salop, by whom she had a son, and a daughter, the latter, formerly captain of the Royal Dragoons, and also two daughters, viz., Alicia, married, first, to the late Wm. Oakley, Esq., of Oakley, county Salop, and, secondly, to Henry J. Sheldon, Esq., of Brinsley, county Warwick; and Louisa, married to the late Sir W. Willoughby Druce, Bart., of Baworth Park, county Leicestershire. Lady Trimleston represented a branch of the knightly house of Harrowood, of Concompton, county Wexham, the head of which is now Sir Reginald Darwell, Bart. It should be added, that the Rev. Charles Eustace, the eldest brother of the lady, petitioned the Crown in 1830 for the acknowledgment of his title as Viscount of Bellingham, and the Right Hon. M. Brady, at that time Attorney-General for Ireland, reported on it, concluding thus:—"I am of opinion that the petitioner has shown sufficient evidence

(who died in 1846) she had issue a son, and a daughter, the latter, formerly captain of the Royal Dragoons, and also two daughters, viz., Alicia, married, first, to the late Wm. Oakley, Esq., of Oakley, county Salop, and, secondly, to Henry J. Sheldon, Esq., of Brinsley, county Warwick; and Louisa, married to the late Sir W. Willoughby Druce, Bart., of Baworth Park, county Leicestershire. Lady Trimleston represented a branch of the knightly house of Harrowood, of Concompton, county Wexham, the head of which is now Sir Reginald Darwell, Bart. It should be added, that the Rev. Charles Eustace, the eldest brother of the lady, petitioned the Crown in 1830 for the acknowledgment of his title as Viscount of Bellingham, and the Right Hon. M. Brady, at that time Attorney-General for Ireland, reported on it, concluding thus:—"I am of opinion that the petitioner has shown sufficient evidence

it must be "accurate." It must indulge in no imaginative theory; it must take its facts from contemporary writers, and must not ascribe to real personages words they never uttered, nor give them credit for ideas they never expressed. It must abide by the text it professes to quote, neither subtracting from nor adding to the original. Such is "the accurate" style of writing a history; and to that Mr. Hallist, to his honour, has rigidly adhered.

The thoughts of all politicians in Europe—its way be added, of the world—at this moment fixed upon Venice. None think it of a marvellous substantiality—a city of dazzling marble palaces reposing upon the surface of the clear, blue waves of the Adriatic—somehow more extraordinary than the Imperial Rome of old, and which, as it was well said in the old Latin epigram, when compared with Venice, appeared as if it had been built by the hands of men, whilst Venetia was a structure that could only have emanated from the might and majesty of the Deity itself.

"—Thierin prägen condere, Urnes aplice struere;
Illum homines dices, hanc promissa Deo."

It is of the varying fortunes of this glorious city, with its justly celebrated Republic, that Mr. Hallist writes; and as the history of England may be briefly told by dwelling upon sought but his leading points, the invasion of the Romans, the invasion of the Saracens, the invasion of the Normans, the Reformation, and the Revolution which secured the throne to the house of Hanover; so the history of Venice may be briefly glanced at by pointing to the various changes, or rather developments, of those simple principles of self-government on which it was originally based.

The Venetians themselves considered that their free and Christian republic started into existence upon the 25th March, in the year 421, when the refugees nominated three consuls to rule over the Rialto, then declared to be a place or city of refuge. The consuls, it may be observed, were in 457 supplanted by tribunes. The real and purely historical commencement of Venice must, however, be dated from the month of March, 607, when the people, acting under the advice of their ecclesiastical superior, freed themselves from tyrannical and the incapacity of their tribunes, and elected as their chief Pope Lucio Anafosto, and invested him with supreme power as their civil, military, and ecclesiastical chief. The form of government then established continued to the time of Ziani, in 1172-3, and the last considerable change was made in 1296, followed by the Republic, and that, with few modifications, may be considered as continuing to the time of Napoleon Bonaparte, the perfidious destroyer of the ancient and illustrious aristocratic Commonwealth of Venice.

This briefly and imperfectly may be glanced at "the constitutional history of Venice, told so fully, so elaborately, and so clearly, by Mr. Hallist. It is a history alike interesting and instructive—interesting to the people of England, and instructive to all other nations of Europe, that have been so long and so vainly seeking to secure freedom for themselves. That persons have always hitherto failed, because, unlike the Venice and to England in their endeavor to establish what they called "constitutional government," they were indulging in theories and making experiments, instead of carrying into effect reforms graded upon the ancient institutions of their country. They have not perceived that reforms, to be lasting, must be the work of the long-established and powerful, and be congenial to the habits of the communities on which they are imposed.

The duration of the Venetian republic is attributable to the fact, that from its first origin to its final violent destruction by exterior force, it proceeded upon ancient customs, making only slight and almost unperceptible changes from time to time, such changes and modifications as new circumstance, new inconveniences, or unforeseen necessities, rendered feasible or polite, to have effected. In this consists the wisdom of statesmen, as contradistinguished from the vanity of political charlatans, who, by the least and most unimportant change, the Patriarch of Grado, in the seventh century, and of an Abbé Sèvres in the eighteenth. An enlightened and highly-gifted Italian writer, when referring to changes to be effected in an existing form of government, has made an observation, the wisdom and sagacity of which is worthy of the Venice of old England and Venice. "It is necessary," says the Italian philosopher, "that those who take upon themselves the responsibility of effecting such changes, should carry them out in such a manner as to what is new will chime in perfectly with the old, and that the changes themselves fit into the indentations that have been left by the first founders of the constitution."

"—corvise attendera a farci, se la cosa nuova, si avvegna bene alle antiche, o si contenga all'addellato lacerto da' primi fondatori."

This work will be interesting to Englishmen on account of the able manner in which it traces out and details the political progress of Venice, both in its internal development and its foreign relations; but it will also be peculiarly interesting from the close relationship which it demonstrates to have existed for a long time between England and Venice, and their intimate commercial connection with each other. Taken as whole, "Hallist's History of the Venetian Republic" is an important contribution to the history of the Venetian Commonwealth, and that the author's labours are not yet brought to a close. We look forward to the continuation of his labours with the sincere wish that what is yet to do may be equal, as we feel confident it will, to what has been already accomplished.

Mr. Hallist's history will certainly take its place as a standard work on the subject to which it is devoted; and therefore do we recommend him to look again to the first portion of the chapter (pp. 6, 6, especially) with which he begins. In the hurry of composition he has fallen into a mistake when he affirms that Julius Cæsar made an expedition to the Venetian Coast, and that he certainly upon people that were called "Yenni," but those "Yenni" were the inhabitants of Venice in Britain, whose descendants are now to be found in the Département du Morbihan.

The first time this mention is made of the "Yenni" in Cæsar is in the seventh chapter of the third book, "De Bello Gallico," and the origin of the military and naval operations that then took place is narrated by him in the following manner. He states that Cæsar was then (i.e. 58 B.C., 56) wintering in the duchy of Angou (Andunum), and that he was surprised by the Venetians, who sent him and military tribunes to look for provisions of transport ships. The T. Terentius, who went to the Euzubii; M. Trebinius Gallus, to the people of Corvea (Curostobian), that is in the Côtes du Nord; and Q. Velantius, with T. Silius, to the people of Vannes (in Venetia). The consent of the Romans, ambassadors by the Britons led to the war which Mr. Hallist supposes was carried on against the Venetians.

Both the inhabitants of Vannes and of Venice were called "Yenni"; the city of both was styled "Yennia." (See Cæsar, Bell. Gal. lib. ii., c. 9, and Liry, lib. i., c. 1, lib. ii., c. 18, lib. iii., c. 22.) It is a point noted by Mr. Hallist with British antiquaries whether the "Yennia" mentioned by Cæsar, that is Durocor, the capital of the ancient people of Vannes, was situated where is now the modern City of Vannes, or at Locmariaquer. The similarity of names has led to a mistake, which, with inferences drawn from it, can, with little trouble, be corrected in a future edition.

THE AUTOBIOGRAPHY OF A PRESBYTERIAN MINISTER.

This autobiography of a man, requested by an unknown sculptor to sit for "Olympian Jove," called by Walter Scott, "Juglar Carrick," the greatest demigod I ever saw," a jovial companion, a favorite of both men and women, filling an important place in the Presbyterian Church at the beginning of the reign of George III. and living till 1865, who mixed all his life in the best literary society of Edinburgh, and who, as a writer, and as a man, and as a Presbyterian minister, travelled through several parts of England and Scotland, is exceedingly interesting. The author was present at the battle of Preston Pans, and saw the Pretender; he was a Volunteer on the right side in 1746, and encouraged the Volunteers only a year afterwards to arm themselves with muskets and bayonets, and as military courage, for he was one of the first Presbyterian clergymen who avowed himself a card-player and frequented theatre; he was an author of considerable pretensions, and a leader in the assemblies of the Church, and gives us information on many subjects.

The book contains a notice of almost every memorable man in the early part of the long period, and a running commentary on the more remarkable events. Unfortunately it was not long till late in life, and only a small part of it was left, imperfect and incomplete. The editor, Mr. Hill Burton, has performed his duty well; supplied a short tale to a little lead, gives many explanatory notes, but the body, existing only in Dr. Carlyle's consciousness, is lost for ever. Only this inspires us with any regret, for as far as the work goes it is clever and agreeable. If we cannot say that it is as ragy as the memoirs of Horace Walpole, extending over the same period, it is much more candid. The disappointed courtier is a satirist and a snorer, the clergyman is a bold honest speaker and a careful observer. His life of labour was also a life of enjoyment. He was jovial "within the limits of decent joviality," and gives a cheerful yet faithful portrait of the great men of his time, and of the great events of his age, and of his own life, and his good taste; and we only wish, as we come to the end, that he had loved to write more, and clear away the repetitions which the editor has not liked to delete.

We are astonished at the number of historical characters of whom Dr. Carlyle, from personal knowledge, tells us something new. Two Dukes of Argyll, John and Archibald; the Duke and Duchess of Buccleugh (Adam Smith's amiable duke); Lord Bute, attending at his levee bored and spurred, that he might have an excuse for hurrying away; Charles Fox, the great orator, and a more than a speaker of his time, a meteor glancing through the social sky; Clive, with the two sides of his face extremely lively, morose, mooping, and melancholy; Charteris, satirized by Pope, because he was a runner of Walpole's; Colonel Gardiner, the enthusiast, whose conversion from raku is a modern miracle; Lord Grange, a brother of Earl Mar, made a judge, as a century before Shaftesbury and others were made chancellors, not because they were good lawyers, but politicians; and had political connections; Wedderburn, going circuit without a brief; Wilkes, the politician, who attracted the notice of the great men of his time; Townshend, by whom he was outdone in conversation; Littleton and Sherstone, Franklin, Adam Smith, David Hume, Home, the author of "Douglas," Robertson the historian, Lord Mansfield, Lord Camden, with many others, pass before us in this autobiography, and we are enabled to see the real character of many of our countrymen, the leading men of Edinburgh, who have something new and worth remembering. Adam Smith, the precursor and tutor to the Duke of Buccleugh, who did honour to his master, was so shy and so little a man of the world, that he was not able to do so in the society of his friends, the leading men of Edinburgh, who have something new and worth remembering. Adam Smith, the precursor and tutor to the Duke of Buccleugh, who did honour to his master, was so shy and so little a man of the world, that he was not able to do so in the society of his friends, the leading men of Edinburgh, who have something new and worth remembering. "Claremont and the Princess Charlotte," and the translation of Torquato Tasso's "Father of a Family."

"The Intellectual Governance of Man and Woman," by James M'Grigor Allan, London: T. C. Newby, 80, Welbeck-street, Cavendish-square.—A useful, and, in some respects, a new, and, in others, an old, view of the human society, many young, and, indeed, many old, persons, are, it is said, disinclined to marriage. The author is particularly severe on that class of gentlemen generally known by the designation of "fast young ladies." He describes them as "a class of persons who are not only without any religious principle, but who are also without any moral principle." He says that: "these animated dolls—these human butterflies, fluttering away their little span of life without a thought of the old age or the immortality of the soul, are the most dangerous and the most numerous of the elements that there is a remedy for the evils that now exist, and it is one at the same time simple and easy of execution." "Much," he says, "of this great evil might be remedied if the young ladies were taken to make home happy, and the domestic circle more cheerful."

"Burford Cottage and its Robin Redbreast." New edition, edited by Mrs. R. Valentine. London; William Tegg.—This is a new edition of an old story, long established as a favourite with young persons. The work was originally written by Mr. Kendal, with the intention of conveying to the youthful mind accurate notions upon such subjects as astronomy, geography, science, and philosophy. The discoveries that have been made since the book was first written, have rendered some alterations necessary; and these have been effected in a spirit worthy of the original author. The volume is a small, neat, and beautiful book, of pleasing and instructive volume, and well adapted as a small price-book in schools.

"Patience." By Perseverance. E. C. Sparrow, New Bedford street.—We are not about to speak of a virtuous quality, in the language of the Apostle, gives a man the possession of his own soul, but of a game of cards which bears the same name. The quantity of harmless amusement derived by many from placing cards in particular positions, and bringing them into some peculiar order, is almost incalculable. It is a pastime which is free from all the tediousness and delicate or half-occupied moods, pass many evening hours in playing Patience; and Perseverance has done them a good turn by collecting and publishing a description of a great number of modes, perhaps inventing some new ones of playing the game. The little book is a model of neatness and good taste, and is so little troubled by care that they can pass their time in playing Patience.

"The British Almanac, for 1861, of the Society for the Diffusion of Useful Knowledge." London: Knight & Co, 90, Fleet-street.—"Companion to the Almanac; or, Year-book of General Information for 1861." London: Knight & Co, 90, Fleet-street.—The *Almanac* is published separately, and is still, as they are in point of fact issued by the same publisher, and contains the same parties, it is but fitting both should be in the same time noticed. The *Almanac* of the Society for the Diffusion of Useful Knowledge contains every thing that is useful, and is in fact, in its nature, the most useful of all the works most useful to persons in trades or professions. As the peculiar attractions of the "Companion to the Almanac" are not so well known, and consequently not so universally recognized as the distinctive features of the Society's *Almanac*, we must, therefore, to give a more complete notice of it, divide it into two parts, and these two parts are divided into minor sections or chapters, and these again into smaller subdivisions. In each part there are eight sections. The first part contains the following sections:—1, *General Information*, 2, *General History*, 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*. The second part contains the following sections:—1, *General Information*; 2, *General History*; 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*. The third part contains the following sections:—1, *General Information*; 2, *General History*; 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*. The fourth part contains the following sections:—1, *General Information*; 2, *General History*; 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*. The fifth part contains the following sections:—1, *General Information*; 2, *General History*; 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*. The sixth part contains the following sections:—1, *General Information*; 2, *General History*; 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*. The seventh part contains the following sections:—1, *General Information*; 2, *General History*; 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*. The eighth part contains the following sections:—1, *General Information*; 2, *General History*; 3, *Natural history, chronology, geography, the fine arts, political economy, &c.* Of this part the following are the minor sections:—1, Localized handbills in north—land agricultural districts; 2, Recent practical applications in meteorology; 3, *General history*; 4, *General geography*; 5, *General chronology*; 6, *General history*; 7, *General history*; 8, *General history*.

"Let's Diary," ed. Mills De Buck, and an Almanac for 1961." Letts, Son, & Co., London, E.C. This very useful book gives in a few pages a mass of information, indispensable for every one who has anything to do, to be acquainted with, or to write about, the various professions, occupations, trades, etc., published with a view of uniting all persons; and that there is a variety of the "Let's Diary" for distinct classes. There is, for instance, a "Let's Diary" for "the medical profession," another for "the legal profession," another for "solicitors and the legal profession," for "students, teachers, professors, and lecturers," for "the army and navy," for "merchants, bankers, engineers," for "travellers," for "farmers, and agriculturists," and, lastly, a "Let's Diary" for "all persons," which contains lists of names, addresses, and telephone numbers, responding prices, and all affording the means to each class of persons for duly registering their name, keeping their money accounts in order, and attending to

THE OLD GREEK EMPIRE. Mr. Finlay, in his valuable work, *"A History of the Byzantine Empire,"* gives the following account of the old Greek court, the people, church and rulers:—"The Court of Constantinople," he says, "was no more than a place of business, where the Emperor, the Patriarch, the Ministers, the nobles, the great officers of State, the army, the navy, the treasury knew no law but law and private interest; and no crime was so venial as successful ambition." As to the people, he declares they were "careless of the rights of justice, and of the laws of God and man; and the only object of examination of its annals, 'What the Greek Church has generally been a servile instrument either of the sovereign power or of the aristocracy, and has contributed to the maintenance of the despotic system, and the perpetuation of the abuses which were alone concerned.' With respect to the Byzantine emperors this is his opinion, 'All the powers the emperor had taken from others, was accumulated in his own person; nothing was done to confer any rights on the people, nor to secure them from the caprice of the monarch.'"

CONSOLATION.

Thrust' art down, low down, poor heart,—
At bottom of the hill,
The prudent friends who knew thee
When Fortune seemed to woo thee,
Are true to Fortune still.
So deeply art thou fallen,
Who once didst soar so high,
That beggars of thy bounty
Look proud, and pass thee by;
And former boon companions
Whisper thy name and frown,—
"The ways of Heaven are righteous,
—So kick him—he is down!"

And yet thou dost down, poor heart,
This consolation's thine,—
Thy Conscience still befriends thee,
And kindly message sends thee,
To bear, and not repine.

The sun that lights the ocean,
Shines also on the sea;
The mole-hill and the mountain
Alike receive its fire,
The humblest dewy daisy
That blossoms on the sod,
May point like the pine-tree skyward,
And drink the light of God.

LIST OF NEW BOOKS AND NEW EDITIONS.

FROM NOVEMBER 29th to DECEMBER 6th.

[illegible][illegible]

LITERARY INTELLIGENCE

Messrs. J. W. Parker & Co. announce "The Pilgrim: a Dialogue on the Life and Actions of King Henry VIII.," by William Thomas, clerk of the Council to Edward VI., with notes from the Archives at Paris and Brussels, by Mr. J. A. E.

MRs. J. H. & James Parker have in the press "A Manual of Monumental Brasses," comprising an introduction to the study of these memorials, and a list of those remaining in the British isles, with 200 illustrations, by the Rev. Herbert Haines; and a "Memoir of the late Joshua Watson," by the Venerable Archdeacon Churton.

by Mr. Charles Dickens, reprinted from *All the Year Round*. Mr. Charles W. Ilfton's book, which is to be published during the present month, by the same firm, is entitled "The Threshold of Chemistry," and not "The Fireside of Chemistry," as has been erroneously stated in a contemporary journal.

Messrs. Macmillan have in preparation "A Life of Blake," the artist, to be copiously illustrated from his own productions; also "Lives of the Sheridans," from the graceful pen of the Hon. Mrs. Norton, who is a granddaughter of the famous Richard Brinsley Sheridan. The same publishers announce Professor

NEW BOOKS,

PUBLISHED BY

E. MARLBOROUGH & CO., AVE MARIA LANE, LONDON.

In the Press, and will shortly be Published,

EFFIE VERNON; OR, LIFE AND ITS LESSONS.

By JULIA ADDISON, Author of "Evelyn Laucelle," "Sister Kate," &c.

Just Published, neatly bound in cloth, gilt edges, price 2s. 6d.,

THE BLACKWELL PRIZE ESSAY FOR 1860:

"ON THE CAUSES THAT HAVE RETARDED THE PROGRESS OF THE REFORMATION."

By the Rev. WILLIAM MACKENZIE, A.M., Author of *Prize Essay*, "On the Effect of the Reformation in Civil Society in Europe," &c. &c.

Just Published, in Two handsome volumes, price 21s.,

AUNT DOROTHY'S WILL.

By CYCLA, Author of "Passing Clouds," "Warfare and Work," &c. &c.

"It is quite a treat to get hold of so clever and agreeable a book as 'Aunt Dorothy's Will.' The author's style is pure, elegant, and to the point. Her people are consistent. It would not be easy to come among the streets of the season a pleasant book."—*Morning Post*.

"There are higher qualities which we can prize in Cycla's work, and there are a sustained interest, and in producing diversity of character, and originality of thought. The author is equally as finished in her writing as she is agreeable and clever."—*Cont. Journal*.

Just Published,

THREE LECTURES ON THE RIFLE.

By COL. E. WILFORD. Cloth, price 2s.

"The atmosphere of Hythe seems singularly favorable to the growth of useful work on military. All the gentlemen who hold, or have held, appointments as instructors at this noble school appear to be masters both of the pen and the rifle, and to be able to write as well as to shoot. The subject of rifles ought to feel indebted to them for the information they have disseminated on the use of the national weapon, especially for the attention with which they have regarded

the Volunteer movement from its very commencement. Here we have three lectures by Col. Wilford, which we must recommend all readers of this journal to purchase forthwith."—*The Review*.

"The excellent Lectures deserve more than a passing word of commendation, and we regret that our space will not allow us to give the extracts we should desire to see extensively circulated."—*Illustrated Service Gazette*.

**SMITH, ELDER, & CO.'S
NEW PUBLICATIONS.**

NEW BOOKS

NOW READY OR IN PREPARATION BY

RICHARD GRIFFIN AND COMPANY,

10, STATIONERS' HALL-COURT, LONDON, E.C.; AND GLASGOW.

WORKS LATELY PUBLISHED.

I.
LIBER ALBIUS: THE WHITE BOOK OF THE CITY OF LONDON. Compiled A.D. 1119, by JOHN CARPENTER (Richard Whittington, Mayor). Translated from the Original Latin and Anglo-Norman, and extensively Annotated, by HENRY THOMAS BAKER, M.A. 4to. 18s. cloth.

II.
THE JACOBITE BALLADS OF SCOTLAND: the Songs and Ballads of the Adherents of the House of Stuart. With Introduction and Notes by CHARLES MACRAY, LL.D. Fcap. 8vo. 6s. cloth.

III.
SABBATH BELLS. New and greatly improved Edition. With Coloured Engravings, after Birket Foster. Small 4to. 10s. 6d. handsomely bound.

THE HOME AND SCHOOL LIBRARY OF USEFUL AND ENTERTAINING KNOWLEDGE: comprising a Series of Complete Treatises by the most Eminent Men of the Day. 4 vols. fcap. 8vo. 11s. cloth. gilt.

V.
OLD ENGLISH POETRY: comprising Chaucer's Canterbury Tales. Edited by THOMAS WRIGHT, M.A., F.S.A.; and the Penna, Rong, and Ballads relating to Robin Hood, edited by JOSEPH RITSON. Medium 8vo. 6s. cloth.

THE HISTORY OF THE SCOTTSISH REFORMATION. By PETER LOMERIE, D.D., Professor of Divinity, English Presbyterian College. With a beautiful Series of Landscape Illustrations by Birket Foster. Post 8vo. 10s. 6d. cloth elegant.

VII.
THE PHILOLOGY OF LANGUAGE: comprising Universal Grammar and Glossary. By SIR JOHN STODART, LL.D. Crown 8vo. cloth.

VIII.
THE PHYSICAL GEOGRAPHY OF PALESTINE. By JOHN KITTO, D.D. New Edition. Small 8vo. 2s. 6d. cloth.

RECOLLECTIONS OF AN EMBASSY TO CHINA AND JAPAN, in 1857-58, by the Baron GUN. By the Marquis de MONTSE. With Coloured Illustrations. Fcap. 8vo. 6s. cloth.

X.
LECTURES ON THE PHYSICAL FORCES. Delivered to a Juvenile Audience at the Royal Institution, Chelsea, 1859. By Professor FARADAY, D.C.L. Reprinted and Edited by WILLIAM CROOKER, Editor of the *Chemical News*. With numerous Illustrations. Fcap. 8vo. 3s. 6d. cloth.

XI.
A LEXICON OF FREEMASONRY. By ALBERT G. MACKEY, M.D. New Edition. Edited by DONALD CAMPBELL, Esq. Crown 8vo. 7s. 6d. cloth.

XII.
THE WRITINGS AND PHILOSOPHY OF BACON. Edited by GEORGE L. CRAIK, Professor of English Literature, Queen's College, Belfast. New Edition, revised. Small 8vo. 3s. 6d. cloth.

XIII.
TRACTS, PHYSICAL AND MATHEMATICAL. By HENRY LORD BRIDGES, F.R.S. Second Edition. Crown 8vo. 7s. 6d. cloth.

XIV.
THE WORKS OF HORACE. With 250 Illustrations in the Text and Notes. With Memoir by the Rev. H. THOMPSON, M.A. Crown 8vo. 6s. 6d. cloth.

XV.
THE WORKS OF VIRGIL. With 350 Illustrations in the Text and Notes. With Memoir by the Rev. H. THOMPSON, M.A. Crown 8vo. 10s. 6d. cloth.

XVI.
THE SPEECH OF CICERO FOR AULUS CLAUDIUS. With Prolegomena and voluminous Notes. By WILLIAM RAMSAY, M.A., Professor of Humanity in the University of Glasgow. Second Edition. Crown 8vo. 6s. cloth.

XVII.
A COMMENTARY ON THE OLD AND NEW TESTAMENTS. With Introduction by MATTHEW HENRY. New Edition. 3 vols. super-royal 8vo. 50s. cloth.

XVIII.
A COMMENTARY ON THE BIBLE: containing the Old and New Testaments, according to the Authorized Version. New Edition, with Explanatory Notes. By the Rev. THOMAS SCOTT. Practical Observations, copious Marginal References, Indexes, &c. 3 vols. royal 4to. 63s. cloth.

XIX.
ALTAR OF THE HOUSEHOLD: containing a Form of Family Worship for every Morning and Evening throughout the Year; also Prayers, Hymns, and Thanksgivings for Particular Occasions; and an Introduction, by the Rev. LEWIS ALEXANDER, D.D. Edited by the late Rev. JOHN HARRIS, D.D., assisted by eminent contributors. Seventy-first Thousand. Royal 4to. 21s. cloth, gilt, or, with 25 Steel Engravings, 25s.

XX.
SHAKESPEARE'S DRAMATIC WORKS. Edited by CHARLES KNIGHT. The Strimfied Edition. New Edition. 6 vols. fcap. 8vo. 21s. cloth.

FORTHCOMING WORKS.

I.
THE CITY OF OUR LORD. A Series of Twelve beautiful Photographs of Jerusalem and its Environs. With Descriptions. Small folio, 21s. elegantly bound. [Ready.]

II.
THE DRAMATIC WORKS OF WILLIAM SHAKESPEARE. Adopted for Family Reading, with all objectionable words and Phrases removed. By THOMAS BOWDLER, LL.D. New Edition, with beautiful Steel Engravings. 1 vol. small 8vo. 10s. 6d. cloth. gilt. [Ready.]

III.
A DICTIONARY OF CONTEMPORARY BIOGRAPHY: a Reference-Book to the Peerage of Rank, Worth, and Intellect; containing the Lives of above One Thousand Eminent Living Persons, prepared with the utmost accuracy. Post 8vo. 6s. 6d. cloth. [Ready.]

IV.
THE COINAGE OF THE BRITISH EMPIRE. With a Series of beautiful Examples, printed in Gold, Silver, and Copper, and Illustrated Text, by H. NOLH HUGHBERTS. New and Enlarged Edition. Royal 8vo. 21s. handsomely bound. [Ready.]

V.
SUNSHINE IN THE COUNTRY: a Book of Rural Poetry. Illustrated by a Series of exquisite Photographs introduced into the Text. 1 vol. small 4to. 21s. handsomely bound. [Ready.]

VI.
A TREATISE ON THE BRITISH CONSTITUTION. By HENRY LORD BRIDGES, LL.D., D.C.L., F.R.S., Member of the National Institute of France. Small 8vo. 6s. cloth. [Dec. 1860.]

VII.
YOUNG BENJAMIN FRANKLIN: a Book for Boys. By HENRY MATHER, Author of "The Youngest Boy Philosopher," &c. With Illustrations by John Gilchrist. Fcap. 8vo. 6s. cloth. [At Christmas.]

VIII.
THE MAGIC OF SCIENCE: a Boy's Book of Easy and Instructive Scientific Experiments. By JAMES WILKIE. With many Illustrations. Crown 8vo. 5s. cloth. [December 10.]

IX.
THE AUTHORS OF ENGLAND. By HENRY F. CHOLLEY. New revised Edition, with a beautiful Series of Portraits in Relief, by Collier. Royal 8vo. elegantly bound. [December 15.]

X.
A COMMENTARY ON THE GREEK TEXT OF ST. PAUL'S EPISTLE TO THE EPHESIANS. By JOHN EADIE, D.D., LL.D., Professor of Biblical Literature in the United Presbyterian Church. Second Edition, revised and enlarged. 8vo. 11s. cloth. [In January.]

XI.
FINDEN'S DRAWING-ROOM TABLE BOOK. With numerous Engravings. Small folio, 21s. cloth. gilt. [Ready.]

XII.
A CYCLOPEDIA OF CHRISTIAN MISSIONS: their Rise, Progress, and Present Position. By the Rev. J. LEWIS ALKMAN. With Map. Second Edition, revised. Crown 8vo. 6s. cloth. [In January.]

XIII.
THE COMPLETE WORKS OF WILLIAM HOGARTH. Comprising 150 Line Engravings. With Descriptions by Dr. TESSLER, and Introductory Essay on the Genius of Hogarth, by JAMES HANNA. 1 vol. small folio, 42. 12s. 6d. elegantly bound. [Ready.]

XIV.
RAMBLER AMONG WORDS: containing upwards of Fifteen Hundred Illustrations of the Poetry, History, and Wisdom of Words. By WILLIAM RINGTON. Small 8vo. cloth. [Dec. 10.]

XV.
AN ECCLESIASTICAL DICTIONARY: comprising Christian and Jewish Sects, Denominations and Heresies; History of Dogmas, Rites, Sacraments, Ceremonies, &c.; Liturgies, Creeds, Confessions, Monastic and Religious Orders, &c. By JOHN EADIE, D.D., LL.D., Professor of Biblical Literature in the United Presbyterian Church. Post 8vo. [Ready.]

XVI.
A HISTORY OF LEARNING AND LITERATURE IN ENGLAND. By GEORGE L. CRAIK, LL.D., Professor of English Language and Literature, Queen's College, Belfast. 2 vols. 8vo. [Ready.]

XVII.
A MANUAL OF MORAL AND METAPHYSICAL PHILOSOPHY. By the Rev. FREDERICK D. MATTHEW, M.A. Concluding Partion. Crown 8vo. [Ready.]

XVIII.
A LIFE OF WILLIAM CORBETT—Social, Literary and Political. Partly Autobiographical, and continued by his Son JAMES PAUL CORBETT, Barrister. Fcap. 8vo. [Ready.]

XIX.
A MANUAL OF CIVIL ENGINEERING: comprising Engineering, Surveying, Earthworks, Foundations, Masonry, Carpentry, Metalwork, Roads, Railways, Canals, Rivers, Waterworks, Harbours, &c. By J. W. B. S. GIBBS, F.R.S., LL.D., Regius Professor of Civil Engineering and Mechanics in the University of Glasgow. Crown 8vo. [Ready.]

XX.
THE ANCIENT COINAGE OF GREECE AND HER COLONIES. With a Series of beautiful Examples printed in Gold, Silver, and Copper, and Illustrated Text by H. NOLH HUGHBERTS. Royal 8vo. [Ready.]

THE LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 24.]

SATURDAY, DECEMBER 15, 1860.

[PRICE, WITH SUPPLEMENT, 3d.

THE LAST NEWS FROM CHINA.

PUBLIC attention, so capricious in its objects of interest, is at this moment riveted, and not without reason, upon the operations of our arms and diplomacy in China. Each mail, as it arrives, not only brings us intelligence of thrilling incidents that have occurred, but stops, like an exciting tale in a periodical, at the most critical moment, condemning us to a fortnight of intense suspense and vague conjecture. Speculation as to what is to happen next is varied with dogmatic assertion as to what we ought to do. And we remark that the most decided opinions are expressed upon the subject by those who have had no personal experience either of the country or the people, whose acts and probable policy they discuss.

It is only natural that this should be the case. Those who are familiar with the Chinese know how impossible it is to predicate anything of so eccentric and incomprehensible a race, and wisely abstain from committing themselves to any decided view as to the best policy for Lord Elgin to pursue in the very difficult position in which he is placed. It will be easier for us to point out these difficulties than to show him the way out of them; safer to advert to the different courses open to the Chinese diplomatists, than to prophesy which they will adopt.

There can be no doubt that it was not Lord Elgin's original intention to take Peking; the experience of the first expedition in '58 had convinced him that a rapid advance on the capital would frighten away the Emperor, and involve a most embarrassing situation. He therefore entertained the proposals of Kweiliang at Tien-tsin. Knowing that they would end in nothing, never intending that they should stop him there, but desirous of showing the Emperor that he was more anxious to treat than to capture Peking. The delays on the march from Taku to Tung-chow, apart from being necessary for transport purposes, produced the desired effect, and the Emperor still remained at Peking, when the commissioners Iai and I were sent with full powers to meet the ambassadors. It was arranged that negotiations should take place outside the walls, and that the ambassadors should afterwards pay a visit to the Emperor, accompanied by an escort of 2,000 men. These plans were foiled by the rashness and folly of Sang-Kolinsin, who, probably acting without orders, as he has always done hitherto, thwarted the policy of the commissioners by massing his troops in the neighbourhood of the proposed camping-ground, with a view, doubtless, to a sudden attack upon our troops. Hostilities were unfortunately precipitated by the untoward incident of the French officer and his mule, at the very moment when Mr. Parkes and his comrades were cut off from retreat by the battle which was raging between them and their own camp.

By the treacherous course of the Tartar general, which, we believe, he took partly upon his own responsibility, and partly by the advice of the war party in Peking, the hopes of the Chinese Commissioners to avert the capture of the city and the flight of the Emperor were defeated, and Lord Elgin found that he was compelled to involve himself in the difficulties he had foreseen by an act of violence, which it had been his object up to that moment to avoid.

It is all very well for a jangling contemporary to talk of substituting the Ming for the Tartar dynasty, as though a change of dynasty in China was effected as easily as a change of government here. These changes have frequently taken place in the history of China, but have always been preceded by half a century of anarchy and con-

fusion. Four hundred millions of people don't all agree to submit to the rule of the new comers without expressing their own views on the subject. Nor will the Tartars see their authority slip from their grasp, even though the revolution is attempted to be effected under the auspices of a few Europeans. If Lord Elgin is going to superintend a change of dynasty in China, as has been kindly proposed for him, with the aid of twelve men who speak the language, and six thousand allies to keep order until he has put the Canton shopkeeper who heads the rebellion into the Imperial yellow, we do not envy him his task.

If, on the other hand, he entices the Emperor back to Peking by a speedy evacuation, his own movement on Tientsin will be considered a retreat, and the Emperor's return be regarded as a triumph. The occupation of Peking during the winter is the alternative decided upon; we cannot venture an opinion of its expediency. We see all the objections; perhaps, were we on the spot, we should perceive more clearly the advantages. The objections appear to be,—first, that an occupation of Peking may force upon the Chinese Government a permanent change of capital, inaccessible to our troops, and from the recesses of which the Government may pursue its old dogged and obstinate policy with impunity; secondly, that the occupation of Peking implies a continuation of hostilities; for the Chinese are not likely to sign a treaty which contains as a stipulation the military occupation of their capital. The garrison must therefore make up its mind to stand a siege by the whole available fighting population of Tartary throughout the entire winter. We do not pretend at this distance to judge of the capabilities of our army, or of the advantages of their position for resistance. We presume they will scarcely depend for supplies upon a line of communication 120 miles long, when the thermometer is at 20° below zero, and the Peiho frozen four feet thick.

The flight of all the authorities is an invariable result of the capture of a Chinese town. In addition, therefore, to maintaining themselves in Peking, the allies will find themselves compelled to institute some description of municipal government, or else see the city given up to pillage by the lower orders. There are at this moment three Englishmen conversant with the Chinese language with the army. The task of governing a city of 2,000,000 of inhabitants, not one of whom knows any language but his own, with only three interpreters; of establishing the necessary tribunals, police, prisons, &c., will be found difficult. These are a few of the objections. The advantages are to be found in the moral effect which the occupation of Peking will have upon the whole of China, and the probability that if we hold out till spring, we shall make a better treaty than we could now, always supposing that in the meantime neither the dynasty nor the capital are destroyed.

The Emperor may either sulk at Yehol, his present retreat, and refuse to treat, hoping to worry us out; or he may pretend to treat, hoping to take us in; or he may really treat, seeing that his only chance is to make the best of it. But the basis of any negotiation which is likely to last will probably be the evacuation of Peking before winter. That settled, all the other points would be conceded; one of these should be the occupation of Tien-tsin, as a material guarantee. We should have little fear of our resident minister being treated with disrespect, with a British force in permanent garrison at Tien-tsin, which is connected by a short line of communication with the sea, and affords a strong natural military position,

The distance to Takoo is only thirty-six miles, the country is a dead level, and where it is under water during the rains a causeway is already made. If we are very desirous of spending some more money on China, we have only to lay down a railway to Tientsin, and we should do more towards forcing good faith upon the Chinese Government than by any number of troops. The unusual interval which has elapsed between the arrival of the telegram and the full details has compelled us rather to start conjectures than to lay down theories, we trust that the mail now hourly expected may relieve our minds of some of those forebodings which have been excited by the telegraph.

FRENCH AND ENGLISH LIBERTY OF THE PRESS.

THE Parisian journals do not seem to have received with any fervour of gratitude, if with any gratitude at all, the instalment of freedom which the Emperor, by a sudden *coup d'état*, and by his own volition, has just bestowed upon them. With few exceptions they either sink in silence, or attempt to undervalue the concession, not because it is not good so far as it goes, but because it is not so large as they would like. But as impartial spectators, we, in this country, cannot refrain from thinking that our brethren of the French press are in the wrong, and that the boon is not only of great present and still greater proximate value in itself, but in the manner in which it has been accorded by the Emperor, and supported by his new Minister.

French journalists do not appear exactly to understand their own position or that of the Emperor, or the real social condition of the country. On all those points they might, if they would but study it attentively, find enlightenment in the admirable circular of M. de Persigny to the prefects of the Départments. Lucid, logical and comprehensive, the circular shows that M. de Persigny has not lived in vain among the English people, that he has been no careless student of our manners or of our liberty, and that he knows how to draw from the written lessons of past history the necessary guidance for acting the history of the future. There need, in fact, be no mistake on the part of the leaders of public opinion about the degree of liberty of discussion which the Emperor can with safety permit, if they will carefully study the exposition of English freedom of the press, which the new Minister of the Interior has placed before them for their instruction. And if they do not turn this instalment of liberty to profitable account, both for journalism and for the country, they will but prove once again what has often been proved before, that France, with all its enlightenment and its intellectual vitality, is not ripe enough either to comprehend true liberty, or to enjoy it.

There can be no true liberty without some degree of restraint. Liberty without law is simply licentiousness and anarchy. It has been said that a Frenchman's idea of liberty is, that he, A, or B, should do as he pleases; but that C, or D, or any one else, should not enjoy the same privilege. But taking a more favourable view of the French character in this respect, it may nevertheless be said that French writers are too theoretical to be practical, and too impatient of existing circumstances that do not fit precisely into their ideal, to tolerate, as they ought to do, the great world of facts that lies around them. "I am afraid the French will never be a free people," said the poet Béranger, to an English poet who breakfasted with him at Passy. "They are far too impatient. You Englishmen are slow, cautious, and tolerant. By patient labour you have built up the house of your liberty—putting in a door here, and a window there; adding a chimney or a wing, or a spare bedroom, as circumstances dictated at the time; and paying no regard to the symmetry of the edifice. If at any time a chimney was blown down, or a window-frame shattered by a storm, you rebuilt the chimney and mended the window; and made the house weather-tight as before. Not so, we Frenchmen. Our edifice of liberty must be geometrical and mathematical. If there be the least defect in it, we do not remedy the defect as you do, but pull the whole house down and build up another on a different model. We are such utter theorists that we fight with facts, instead of making friends with them; and for these and other reasons I much fear that many years must pass before we are fit for any other form of government than a military autocracy." This was said in January 1848, and the events of the last twelve years have singularly verified the sagacity of the speaker.

We have only to reflect a little on the past and present history of France and the French, to be convinced that it is utterly impossible, and that if it were possible, it would be suicidally foolish, for the Emperor to let go his hold over the French press, and to allow it to discuss such a topic, for example, as his own right to the throne, subject to no other control than the prosecution of the offender, and his trial before a jury of his countrymen. This is what a portion of the Parisian press would like; but it is a degree of liberty, or rather of licentiousness, which could not be tolerated in England at the present day, and which, as M. De Persigny shows in his admirable circular, was not tolerated at any period of English history.

When a dynasty is not thoroughly established and secured upon the throne—when there are rival claimants to supreme power,

supported by powerful parties in the State, and founding their claims upon their legitimacy, or the illegality of the revolution that overthrew them—the man in possession, whoever he may be, cannot, and ought not, to permit the press to discuss his title. That is the position of the Emperor; and it is a proof of his wisdom, as well as of his power, that he has seen fit to relax in any degree at all, the stringency of his grasp over the journalism of Paris, and permit it to discuss freely the acts and policy of his government. He has reinstated France in the high European position which it held under his uncle. He has silenced the voice of unreasoning factions. He has given the country breathing-time for material progress; and, whatever his other faults may have been, he has atoned to the bulk of the people for all mistakes or shortcomings, by the simple fact, so intelligible and so dear to all Frenchmen,—that he has lifted the French flag from the mire in which it was cast at Waterloo; and from which neither Louis XVIII., Charles X., or Louis Philippe had the power, even if they had the will, to raise it. "*Il a relevé notre drapeau!*" Such is the exclamation and feeling of the people; and having by this means strengthened his position, his throne, his dynasty, and his system, he has done well to invite the press to break the silence originally enforced upon it, for the prevention of civil war, and to discuss, public affairs, and the whole action of the Government, as the English press does, and has long been accustomed to do, within limits compatible with the existence of the throne, and the personal respect due to its occupant.

We cannot think this a small concession. We cannot think our Parisian contemporaries right in sulking at, or refusing to take advantage of it. If any attempt, to excite sedition or to propagate treason be still reserved for the Minister to deal with, and not for discussion before a jury, a justification is to be found in the fact that France is yet in a state of chronic revolution, that there is a party of Red Republicans, silent but not extinct; a party of Legitimists, backed by priestly and aristocratic influence; and a party of Orangists, too recently dispossessed of power to be altogether friendless. It is evident, if all these factions and parties were allowed to speak as they please on the character and pretensions of the actual chief of the state, that a bloody civil war might speedily be the issue of the liberty which they abused.

There may not always be ministers in France so pure and so upright as M. de Persigny; and if the writers for the Parisian press have not the ordinary common sense and worldly sagacity to understand the value and importance of the movement in favour of free discussion which the Emperor has made, and which a minister like M. de Persigny has been charged to carry into effect, they will only prove once more, and perhaps more disastrously than ever, that the chiefs of journalism are even less liberal than the military chief of the State, and that the real interests of liberty are to be sacrificed for barren and pedantic theories, impossible of realization.

A "STATE TRIAL" AT BERLIN.

WHEN Prince William of Prussia assumed the regency a few years ago, he declared that his intention was "to make moral conquests in Germany." To judge from the result of the recent trial at Berlin, this resolution of his has been attended with very indifferent success. All Germany is at this moment loud in its indignation, not only at the spectacle of utter depravity which has been revealed in the management of the Prussian police, but still more at the removal from his post of that man who, in his capacity of Procureur du Roi, had undertaken to stand forth and unmask this system of villany. It had been expected that this trial would end with the overthrow and punishment of the hated Director of Police, Stieber, to whose charge the Procureur Schwarck had laid not ten, not twenty, not a hundred, but several hundred cases of the most shameful arbitrary interference with the personal liberty of the subject,—this monstrous accumulation of lawless acts being by no means a complete record of Stieber's criminal career, but merely a chapter embracing the events of a few months, taken at random by the Attorney-General to serve as an illustration.

But instead of Stieber suffering the penalty of the law for offences which remind us of the worst times of the tyranny and the *delictors* system of the imperial era of Rome, he is triumphantly acquitted—and, what is more abominable still, Schwarck, the representative of justice, is forthwith removed from his official position! Yes, incredible as it may sound, the acquittal of the hated leader of police involves is followed in less than twenty-four hours by the dismissal of the magistrate who had ventured to arraign him. For the sake of appearances, it is true, Stieber, subsequently to the fall of the Procureur, receives "leave of absence from the performance of his duties for a time," though, of course, with no loss of pay and pension. The great fact, however, remains, that justice, in her struggle against the brutal encroachments of the police, has had to succumb; and that the mouthpiece of Justice has been made to suffer for his tenacity in endeavouring to restore a legal state of things. With grief and anger honest liberals of all classes regret this miserable sight. "As it in

this way," they exclaim, "that the Regent intends making *moral conquests* in Germany!"

It is well worth while to study somewhat more closely the genesis of the terrible revelations which have come out during this recent trial, on the Manteuffel and Hinckeldey system, as well as on the pleasing peculiarities of the present *régime* in Prussia. In May of this year, the Director of the Police, together with another functionary *ejusdem farinae*, was accused before the Stadt-Gericht, of a criminal employment of official power. They were charged with having extorted money by violent threats from various persons, whom, in their capacity as functionaries of the police, they had arrested and kept in confinement for weeks, in defiance of the provisions of the law on personal freedom. The case was made out clearly enough, at least as regards the infringement on the rights of personal security. But here the Director of the Police insisted, as a main point of his defence, that the Minister of Justice,—nay, the Attorney-General himself, had sanctioned those illegal procedures. "There have been cases," he said, "when the Minister of Justice, with the avowed knowledge of the Ober-Staatsanwalt Schwark, has kept persons politically suspected, during weeks, nay, months, in provisional imprisonment, without any judicial order being given or asked for, and without those persons having undergone any inquiry before a judge. Again, those persons have been released equally without inquiry or accusation being instituted against them. Now, if the Ministry of Justice itself has paid so little respect to the special laws of the case, is it reasonable to charge the police in excess of severity?"

These allegations, if true, would show Prussia to have been ruled according to a pattern hitherto supposed to be only in vogue in the most despotic states—such as Russia or the Naples of the late King Bomba. Unfortunately, in spite of the worthlessness of the witness in this case, we can have no doubt that he spoke the truth. If he himself was a vile tool of tyranny, but he was right in declaring that there were other such tools in the higher regions of Government. He had done a good share of the dirty work of those famous "Saviours of Society," who, in November 1848, overthrew the constitution, gagged the press, drove into exile some of the most moderate defenders of the law, and restored at Berlin the right divine of the King to govern wrong. But for all that, it must be acknowledged, that guilty as he himself was, and fully deserving, as he did, an exemplary punishment, the former officer was somewhat higher up than in the bureau of the Director of Police.

The first trial of Stieber, before the Stadt-Gericht, ended with his acquittal—a monstrous judicial decision, which scandalized the country. It ought to be stated here, that besides the charges of abuse of power, extortion of money, and so forth, brought against him officially, there is scarcely a crime, in a social sense, of which the public voice, and even the non-Prussian press, has not accused him of being guilty. On this point we refrain, however, from offering any opinion, confining ourselves to the circumstances connected with his second trial, which, like its predecessor, has resulted in another triumph of the guilty party. On being acquitted by the Stadt-Gericht, he was prosecuted, in the second instance, before the Kammer-Gericht, the Procureur du Roi making use of the time elapsing between May and November, to get up a register of cases of violence and illegal acts committed by Stieber. Armed with those documents, the Crown Attorney came forth to the attack, in the halls of justice, with an emphatic retrospective review of the *régime* of Manteuffel and his police president Hinckeldey, which latter, it will be remembered, ended his career in a duel some few years since, having ventured to meddle as firmly with the vices of the aristocracy as he was wont tyrannically to infringe on the rights of the rest of the population. This review of the Staatsanwalt Schwark, embracing as it does also the more recent role of the police president Von Zedlitz, remains a monument of contemporary history, such as is seldom found in judicial annals. If a Prussian benefactor desires to expose the iniquity from which his country has suffered—and it may be added still suffers—he has only to point to the incidents of this notorious "State Trial" of Justice versus the Police. There it will be seen, in spite of the verdict of "not proven" given by a slavish magistrature, that Prussia, in appearance a country with representative institutions, has still the canker of irresponsible government eating into her very core. And this impression will certainly not be weakened when the fact is added that the Procureur, who officially revealed to the world these hideous blots of political morality, was forthwith diagnosed by the Regent.

This Berlin trial, coupled with the one still going on at Vienna in the affair of Riebler, and the suicide of Bruck and Eysnatten, brings to recollection a series of similar trials and horrible occurrences in high life, which heralded in at Paris the catastrophe of 1848. It is an ominous sign in the life of States when the police conscience has just influence enough to bring about such ugly revelations, without any corresponding power on the part of the people to cause the proper reward to be meted out to the guilty parties. A strong despotic Government, which can annul the truth, may save itself for a time from the consequences of its own misdeeds. On the other hand, a nation with free institutions, into which some foul elements

may have crept, can still purify, without danger, the political atmosphere by the aid of publicity, and the even-handed dealing out of justice to the offenders. But a country where there is just enough publicity to rouse the anger of the people against those that outrage the law, but which yet lacks sufficient popular strength to ensure their punishment—such a country, indeed, is in a chronic state of irritation, and any crisis from abroad may shake its political fabric to the base.

RAILWAY PROPERTY.

IT appears that, in the ensuing Session of Parliament, no less than 302 bills will be brought forward to extend or improve existing lines of railway. Should these projects be all judicious and well considered, we should hail the announcement with much satisfaction, for railways have been amazingly beneficial, and much undoubtedly is required to be done to extend and complete the great work. Every town and village must either have its railway, or be within a convenient distance from a station, to equalize the markets, and the advantages of communication to all. For new works the time seems favourable, as none of any consequence now promise to provide employment for the ever-increasing multitudes.

A continual increase of the classes which can live without labour, is one of the features of modern society. Productive power being increased by knowledge and skill, the subsistence and necessities required are every year obtained by the labour of a smaller proportion of the community. On this account new enterprises must be continually undertaken to preserve peace and continue progress, and probably, at present, a large portion of the spare capital and labour which are always accruing—for they go together—cannot be more beneficially employed, than in extending and improving railway communication.

Putting aside all fancy schemes, the new enterprises required are indicated by high prices and high profits. Railways have led to a great increase in the demand for the produce of land, and in farmer's profits. From all quarters of the kingdom accordingly, even from backward Dorsetshire, we learn that within the last few years cultivation has been more rapidly improved than ever before. The present prices of corn, cattle, and every kind of farm produce, call on the farmer to increase the supplies of food, but the power to increase them from the same area is very limited; and the want of them indicates the propriety of bringing a larger area into closer contiguity with the centres of consumption. At the same time railway proprietors and the projectors of new lines are excited to make additional exertions, by the dividends on the principal lines being now continually on the increase, and by the price of railway shares having now generally an upward tendency.

Thus, taking the London and North-Western as an example: the dividends in 1858 were £1 a share; in 1859 £2.15s.; and in the first half of the present year £2.10s.; while the traffic is continually increasing, promising for the whole of 1860 at least a £5 dividend. This is by no means the most flattering example of the increase of railway dividends; but it is the safest and the soundest, and admits of no doubt as to its having been fully earned. Of some other companies it may be doubted whether they keep up their rolling stock and their plant to the fullest efficiency, and allow no necessary part of it to deteriorate. Their dividends are, perhaps, not always paid out of earnings. But this is undoubtedly not the case with this great company, which has raised no less a sum than £36,400,000.

When we consult the market price of shares, we find the following figures:—

| | PRICE OF SHARES. | |
|---|---------------------------------|--------------------------------|
| | Week ending Dec. 10th, 1860. | Week ending Dec. 9th, 1860. |
| London and North-Western | 98½ | 101 |
| Lancashire and Yorkshire | 90½ | 120½ |
| Midland | 106½ | 104 |
| London, Brighton, and South-Coast | 114 | 116½ |
| Canals | 95½ ex d. | 94 |

The general fact indicated by these returns is a considerable increase in the value of railway property since this time last year. We have placed Canals in the list as the best criterion of the value of money at the two periods, and according to them it was higher-priced in December, 1860, than in December, 1859. In fact, the bank minimum rate of discount was 2½ per cent. last year, and now it is 5. Consistently with this, Canals are now nearly 3 per cent. worse than they were then, while the worst of the railways quoted is 2 per cent. better. In the twelve months, then, railway property has become more and the public funds less valuable. Of course there are exceptions to the rise in railway property, and we are slow to believe that the great rise in Lancashire and Yorkshire and Midland shares is entirely justified by the condition of these railways. The London and South-Western shares, for example, were at this time last year 98 and are now 95. But, on the whole, railway property, in relation to funded property, has increased considerably in value in the year. We see these facts with great satisfaction. Of course, the dividends on the debt remain unaltered, while the dividends on the property

feeder; and though the butcher may prefer such an animal when fat to a more kindly-feeding beast, the farmer who has grazed the two knows well enough that for every shilling which in this form goes into the butcher's pocket, two or three shillings have left his own, through the increase of time and food consumed by the slow-feeding beast in coming to maturity.

The sheep in Baker-street are quite as remarkable for size, form, and early maturity as the cattle—Leicester and Cotswolds of long-wooled, and Sumner, West-country, and Hampshire Downs, of short-wooled breeds, all show at twenty and twenty-one months old, such developments, such quantities and qualities of mutton, as must "excite the envy and admiration of the world." Then there are the pigs; who shall describe the competitors for the pig prizes? They number in their ranks persons of every degree, from the Prince Consort to the little farmer and the miller. Besides His Royal Highness we find the Countess of Chesterfield, Mr. Benyon, M.P., Mr. Walter, M.P., Mr. E. Macanaghten, of the Indian Council, and Mr. de la Rue, the great paper manufacturer, with a great number of farmers and agricultural squires, feeding pigs for the Smithfield Club Show, and feeding them, in most instances, so fat that how the animals contrive to carry their fat and breathe must be a study for the physiologist. Yet here we have only exaggerated pork and bacon, indicating the breeds by means of which estate pork and prime bacon may be most quickly and cheaply raised. No notices of the Smithfield Club Show would be complete without a reference to the agricultural implements, machinery, seeds, and roots which the galleries contain. These are in themselves a study to the observant economist or politician, and form the source of most lively interest to agricultural and general visitors. The capital employed in manufacturing agricultural implements in this country is enormous, and it is increasing and will increase, for not only are our own and the Irish farmers yearly becoming larger buyers of such articles, but the export trade is every day assuming larger proportions. The opening of the trade with France is fully appreciated by our implement-makers, who are looking for large accessions of business from a French demand.

TOWN AND TABLE TALK.

(From our Pall Mall Correspondent.)

THURSDAY EVENING.

The greatest anxiety fills the public mind, in the absence of the details of the late transactions under the walls of Peking, and it is not surprising that vague and alarming rumours take the place of facts. This is one of the effects of the telegraph, which necessarily conveys the news in a brief and very imperfect manner. In fact, so, the public would not like to be without it, such as it is.

As usual, the city is the great source of alarming reports. It has been said even that Government were in possession of discreditable news respecting the late prisoners in the hands of the Chinese. But I am able to inform you that such is not the case, and that the heads of the Government are at this moment awaiting the arrival of the mails with as much, or more anxiety than other people.

The Calcutta Mail, which brings the Chinese letters, via Singapore, has not yet arrived in Marseilles, and as the journey from Marseilles to London takes from thirty to thirty-five hours, the accounts of what actually took place, up to October 22nd, will not be read in London, fully before Saturday morning. As the time is so near when our anxieties will be relieved, it seems useless to speculate. Had some reinforcements been needed, they would have been sent from India, where the news of the attack upon Peking, and the probability of being obliged to occupy that city and Tien-Tsin, would have been received long before it reached us.

Every preparation, however, has been made to send out supplies and stores, and ammunition, and, if necessary, reinforcements. But our naval strength is very large in the Chinese waters, and will be able to render any necessary aid to the land forces. The French want all sorts of reinforcements much more than we do, and we believe are much more prepared to send them in due time to such a distance.

The letters therefore cannot come to land before Saturday. Summonses have been issued for a Cabinet Council for Tuesday next, the 18th, which will give time for the consideration of the despatches, and for the arrival of those ministers who are out of town.

There will be a Chapter of the Order of the Garter held at Windsor on Monday next, the 17th, for the purpose of the election of the Duke of Newcastle to the stall vacant by the death of the Duke of Richmond. Several of the Ministers will be in attendance. It is doubtful whether the Junior Knight, Lord Derby, will be able to attend. The new knight is introduced, on his election, by the two junior knights present, and Lord Derby, who has not attended since his election to the regular vacancy caused by the death of Earl de Grey, would, no doubt, be glad to assist in the high reward conferred upon the Duke of Newcastle.

I am sorry to hear that the last attack of gout under which Lord Derby has suffered, has been more severe than usual, and the recovery has been much more slow. The apprehension of the disease, which is flying about, reaching the head, has caused much uneasiness in the many friends of the ex-Premier, and he has been compelled to refrain from business, or any pursuit of an exciting or harassing description.

The rank of the British resident at St. Petersburg, as well as at Vienna, has been restored to its ancient position of Ambassador, and Lord Napier has found in Russia a fitting theatre for the diplomatic ability which he has displayed in so many other places—at Naples, Constantinople, Washington, &c. Baron Brunow, too, resumes his old position of Ambassador to the Court of St. James's which he was first appointed to fill at the period of the Russian troubles, when M. Thiers was baffled by Lord Palmerston at the head of the diplomacy of Europe.

There is evidently great significance in these changes, or, rather, restorations of a more important union with the Northern Courts. These Courts have been in their good behaviour of late, reforming at home, and interfering less in the affairs of other countries.

It is manifestly not to the interest of Europe that a great central state like Austria should be destroyed or dismembered altogether, and we trust that wiser councils at home, and the good advice of her Allies, will be able to restore her to a more liberal policy than she has pursued for some time past, and to preserve her influence in Europe if wielded in a right direction.

The Emperor of the French seems inclined not to be behind-hand in progressive reforms of the mode of government in France. Count Persigny has commenced well with the press, and with the elections. We are sorry to lose him from London, but his presence seems absolutely required in France to inaugurate the improvements which are certainly on the right side, although they deal with the executive and administrative reforms in the constitution. The appointment of Count Flahault to the London Embassy is due, we presume, more to his connection with Count de Montigny than to any other assignable reason. He is an eminent and experienced man, with very high English connections; but he has been reckoned too much of an Orleanist, having served Louis Philippe in office, and been treated by the family ever since their retirement from France.

But it is to be presumed that the Emperor knows what he is about, and, amongst other things, must be anxious to conciliate as many of the adherents of the Orleans dynasty as possible.

The ex-King still holds on at Gaeta, like grim death, and seems resolved to appear to yield to force, and to compel the Sardinians to the final attack by sea and land. He is likely to be gratified in his wishes, for Napoleon has taken away the interdiction, and has informed France of Bourbon that the fleet of France was there to ensure a safe retreat, and not by any means to encourage a hopeless resistance, or to prolong a struggle between parties so soon to be united under one Government.

The election at Southwark has gone decisively for Mr. Layard, which seemed ordered from the retirement of Mr. Fawcett on Saturday last. I thought from the first that a political notability would defeat a merely local candidate. Mr. Scovell appears to be a most respectable gentleman, but he was no match for the activity of his opponent, who is not over-scrupulous against those who stand in his way. Mr. Layard made good use of Mr. Scovell's hesitation about the use of the lark, which is a theme not to be thrown away against a candidate for the suffrages of Barclay and Perkins's draymen.

THE GOUTY PHILOSOPHER.—No. XXIII.

MR. WAGSTAFFE EXPLAINS WHY HE HATES UGLY PEOPLE.

I KNOW that the general reader, and other foolish people, will accuse me of hard-heartedness, when I make the assertion, as I hereby do, that no human creature has a right to be ugly, and that it is not possible to love or even to respect an ugly person. If there be any opponent of this dogma, let him listen to what I have to say, before he proceeds to demand. Perhaps I may be able to convince him before I have shown that no one need be ugly unless he likes, and that ugliness is an offence, and not to be tolerated.

In the first place it is clear that there is no such thing as an ugly mathematical figure, an ugly flower, an ugly tree, an ugly herb, an ugly mineral, or an ugly elementary substance. There cannot be an ugly square, an ugly circle, or an ugly triangle. These forms are always beautiful, and every one, who thinks, must admit that it is impossible they can ever be otherwise. In the same manner, there cannot be an ugly tune, because, if it be a tune at all, it must conform to the laws of melody, and all conformity to law is beautiful in its degree. The vegetable world of herb, tree, and flower, is governed by the same rules. Oak, beech, cedar, elm, and poplar—rose, lily, violet, primrose, daisy—blade of grass and sea-weed—all these things are beautiful. As one star differs from another star in glory, so one flower, or one tree, may be more or less beautiful than some other in colour or in form, in scent or in fruitfulness, or in some quality that commends itself to the senses of mankind; but the essence of beauty is in them all.

But there are, as we can all see, if we use our eyes, many ugly men, ugly women, ugly children, ugly beasts, ugly birds, fishes, and insects. How is this? Simply that ugliness is not a physical arrangement, but a physical and moral disarrangement and contravention of Harmony and Law. A parallelogram or a circle is perfect, and therefore cannot be ugly. It cannot deviate from the laws of its nature, and has nothing in it that can offend a nature different from its own. Thus I may define ugliness to be a deviation from law in general, and from the especial moral nature of him who beholds it. To a hyena a hyena may not be ugly, because it may not outrage the senses of other hyenas, or break any law implanted in the nature of those animals; but to a man a hyena is an intensely ugly creature—not on account of its shape, but on account of its ferocity, gluttony, and untameability, and of that hideous laughter, too like and too unlike that of a man to be pleasant when proceeding from a beast. A cow or a horse is not ugly, for it ministers to the uses of men without offending any of their senses; while a pig on a dunghill is to some extent ugly because, though it ministers to man's uses, it offends his sense of proportion by its obesity, but still more his love of cleanliness by its filthiness. In like manner a bug is much uglier than a pig, because it not only ministers to no use, but offends the sense of smell as well as that of sight, and suggests a disgusting imagery.

As man's life is three-fold, it is three times more easy for him to be ugly, than it is for an individual of a lower species, whose life is (I cannot say mindful but) uniform. Three several orders and degrees of beauty unite in man and woman—the physical, the moral, and the intellectual. Trees,

flowers, grasses, land-weeds, and sea weeds enjoy only the life physical, and cannot therefore be ugly. And here a new definition of ugliness seems to loom upon the mind and vision of the inquirer, and to link it in some way with a woman; for nothing that does not eat, is or can be ugly, unless it be a pictorial or other representation of something that does. Another exception may be taken as regards architectural erections, which offend the laws of proportion,—or seem to offend those of gravitation.

Beside, and all the lower order of animated beings, have the life physical, and a portion, however infinitesimal, of the life moral, and may be ugly in their relations towards men, if their moral life, as seen from man's point of view, be bad, and impair the melody and the harmony of the physical nature.

A snarling, snapping, cantankerous dog cannot be beautiful, whatever his conformation of snout and ears, loins and tail, haunches and legs, but is, out of the very necessity of his savageness, an ugly dog. Nothing can make him beautiful, but cheerfulness, docility, and good conduct toward dogs and men. Without these he is little better than a wolf, and just about as ugly.

Men or women, whatever their physical deformities may be, cannot be utterly ugly, except from moral and intellectual causes. And this brings me to my starting-point; that neither men nor women has any right to be ugly, and that if either be so, it is his or her fault, misdeeds, or crime; and that being ugly, they cannot expect the love of their fellow-creatures. No man can love an ugly woman; no woman can love an ugly man; and if fathers and mothers can love an ugly child, it is a very sore struggle, and may be ugly after all, and not love.

To have lost one's nose or eye, to squint, or to have a hunch-back, are certainly misfortunes, deteriorations of the beauty of the human form, and impairments of its high ideal; but if all these calamities were centred in one unhappy person, they would not make him positively ugly, if he were wise, witty, amiable, benevolent, just, and generous, and passed his life in deeds of kindness and charity.

Milton has not endowed his sublime fiend with the horns, dragon's tail, and other vulgar uglinesses of popular superstition. He was too great a poet and philosopher to fall into such error. The physical beauty of his Satan was originally as great as that of the Angels who had not fallen, in all outward attributes; but the hideousness was in the Mind, and the Mind moulded the body to its own character; and Satan, though he was, as Sidney Smith said, "a fine fellow" in one sense, was terribly ugly in another; sublimely horrible, and infinitely more fearful to think of than the grotesque compound of Ishtar and Dragon whom we owe to the exuberant fancy and bad taste of the monks of the middle ages.

A truly ugly person may originally have had a well-developed nose and regular features; he may be six feet high, and shapely as the Apollo Belvedere, and the evil spirit that is in him has set the indescribable but palpable seal of a bad mind upon all his physical lineaments. He bears the brand of criminality upon his forehead as Cain did, and carries a mark of the divine displeasure stamped upon his face, shaded in his aspect, toned in his voice, telegraphed into his looks and gestures. By these means he is pointed out to his fellow-creatures as one who has sinned against the moral government of the universe, so that all who see him may know him, and take warning by his misdeeds. All that is morally good is physically beautiful. All that is morally bad is physically ugly; *ergo*, every man and woman may be beautiful if they like, and no man or woman has a right to be ugly.—Q.E.D.

Take the case of my excellent friend Mr. Towers. Look at his nose, and his nose only—at that nose, rubicund and Bartholinian, out of all proportion with any ordinary face; a nose pimpled and freckled, bearing blossoms like a tree, and of the colour of the penny, and judge him by that only and you shall, at a casual glance pronounce him ugly. But Mr. Towers is not ugly. The physical deformity is, no doubt, obvious enough, and suggests ugliness to the passer-by. But hear him talk. Listen to his wit. Let him unloose in your presence the abundant stores of his learning. See him take a brick of wisdom here and another there. See him ransack all the trick-knicks of the ancients and the moderns, and watch the house of Fancy or of Learning that he will build with them. Go with him into private life and see what a joyous companion he is, what a good friend he is, what a good husband he is, what a kind father he is, what a pure-minded citizen he is, and in the light of his moral and intellectual excellence, you will look at his ugly nose and admit that the face is beautiful, ay, that the nose itself is more beautiful than many a nose that Phidias or Praxiteles delighted to model, but which belonged to a countenance that was not interpermeated with and moulded by these noble qualities.

Take Trimmies, another man I know, and look at him as he walks along the street—small, spare, and with a hunchback; and at the first glance you shall call him ugly. But you will be in error if you do. Physically he may seem to be ugly, but his mind is a melody and a harmony. He is a logician who could argue with Euclid. He sees daylight in the darkest corners of disputation with a mental eye, over which there is no film or darkness. He talks with eloquent tongue, and neither woman nor man can resist the fascination of his company. How can such a person be called ugly! In spite of his small stature and his hunch, Trimmies is handsomer than silly Captain Fitz-Mortimer of the Rifles, who has a straight back, a Roman nose, and a beard that Methusalem might envy.

Then take the case of Theodosia Perkins—fresh, fair, twenty-three, and passively rich. She has a face and a form that a sculptor might love to

imitate. But she is pert—she flirts—she has a bad opinion of her own sex and of the other—she has no education of the heart or of the mind—she has no taste for colour, for time, for property; she is "fast"—she is "loud"—she is eaten up with vanity and conceit, and thinks herself the very cream and quintessence of the world. In one word, she is ugly in spite of her face and form. To look at her is sufficient to know that she will find no one to marry her, except for her money; and to prophesy that after she is married her husband will detect her.

Take also the case of young Master Wigram. He was born a pretty child, and might have grown up to be a beautiful boy; but he is intensely ugly. He has been humoured and fondled without reason one day, and punished without reason the next; he has been indulged in all his caprices in the morning, and denied his just and natural requirements in the evening. He has been coaxed and petted, coerced and punished, equally without justification; and the result is that he is the plague of every one who comes near him. He is built up of evil passion. There is not a good thing about him. He is a slave one minute, and a tyrant the next; niggardly and extravagant, element and cruel. Though but fifteen years of age, he is ugly in the extreme, because he has not a single moral or intellectual quality to keep his physical qualities in good countenance.

It comes to this,—that whatever physical nature may have done, or may have neglected to do for us, the power of being beautiful remains with ourselves. There are moral appliances that are better than physical robes and poudres to make man or woman lovely and lovable. It is mind that creates face; and that makes little David, strong in the Lord's grace, handsomer than great Goliath, who is only strong in the Devil's favour.

And the superiority of this kind of beauty over all others is this, that the older we grow the more beautiful we may become. "There is one beauty of the stars, and another of the moon." There is one beauty of youth, another of maturity, and another of old age. Excellent are they all; but from its completeness as well as from its rarity, the beauty of old age is the divinest of the three—crown and completion of all the rest. Youth is beautiful for its physical, maturity for its physical and moral, but old age is the happy union of the physical, the moral, and the intellectual qualities, that generally command love, respect, and homage. I know an old woman, of seventy-three years of age, of a beauty as much superior to that of seventeen as that of snowy Mont Blanc to verdant Primrose Hill. Lovely are the snow-white locks, neatly parted over her serene forehead; lovely are the accents of her soft voice, that speaks loving-kindness and forgiveness; lovely is the smile that comes from her eyes, comes to her lips, and lights up all her countenance when she fondles a child, or gives counsel of wisdom to young men at sea; lovely is she even in her mild reproach of a wrong-doer;—so mild and gentle—so more than half-divine—that he or she who relapses afterwards into wickedness, is reckless and hardened indeed.

I dislike ugly people. I said so at first. I say so now. No one has a right to be ugly; and if men and women choose to be ugly, it is their own fault, and they must pay the penalty.

SCOTCH SALMON-FISHERIES.

In the House of Lords, on the 3rd of May last, it was resolved that a select Committee be appointed to inquire into the state of salmon-fishing on the sea-coast and in rivers and estuaries in Scotland. (On the 15th of May the committee commenced its functions; and on a careful perusal of all the evidence which was brought before it, we have no hesitation in stating, that the inquiry was fully justified, and that a vast amount of valuable and important information has been elicited, as to the present deteriorated condition of the Scotch salmon fisheries. The causes of the change have been ascertained, and the remedies for the same are suggested. The Committee terminated its labours on the 29th of June. The best and fairest course for the investigation of the truth was pursued by the examination of numerous witnesses on either side of the question, who came under discussion, as lightly up all there was the following clause: "Et defraudat domum Regis, ne preestant piscari, ad salmones vel salmonibus, temporibus prohibitis super antiquum penam;" and in the 4th section of a statute of James II. 1457, there is the following passage: "That no man in smolt time set veschelles, creilles, weires, or any other engines, to let the smolts to pass to the sea under the paine of £10 in the kirk; and that the schiereff of the land destroy them that are maid."

In fact, from the earliest times down to the commencement of the present century, salmon have been properly cared for and duly attended to; it is only within the last fifty years that the wholesale destruction of them has been brought fully into play, so as almost to threaten their annihilation. There were fixed engines undisturbed for many days in entire view of the mouths of rivers, but to a limited extent; they did not entirely occupy the channel leading to the mouths of the rivers. The greediness and rapacity which induce those who either legally possess, or illegally usurp, the right of fishing on the sea-coast in the present day, to extend their lag-nets to one mile in length, so as to monopolize all the fish to themselves, were unknown to less civilized times, and were reserved for these days of progress; in fact,

those of vanishing proportions which, when they shade her forehead, leave her chin exposed, and when they shade her chin, the forehead lurns in fact for her and her alone are created the vagaries of fashion, which she on her part exaggerates, and so caricatures a caricature. No fast young lady has good taste: the two things are incompatible; can know keep pure and frozen in the midst of fire!

Indifferent to the pleasures and depreciative of even healthy sentiment, the fast young lady is by no means indifferent to the charms of a good marriage, or ignorant of the blessings to be found among the flourish of an advantageous settlement. Money represents to her the one supreme goal of her life; the sinews of her way against delinquency and womanhood; and no Stock Exchange broker is more alive to the value of scrip and shares than this the rollicking girl who seems too wild and wide for the simplest calculation.

Luckily for the more sober part of mankind, the tribe, as a tribe, is husbandless, which at least avoids the disaster of perpetuation by descent. A few, indeed, every now and then, storm through the vestry door and sign their names nobly on the parish church-door, but these are exceptions to the rule—scattered links which hold the two diverging sections together, and prevent the total expulsion of the tribe from the ranks of true womanhood. As a rule, the fast young lady blooms and fades a flower ungathered: it is thought that the cultivation of so rank a grower would be hardly worth the trouble. When a man chooses a mother for their children, they think of something else besides scarlet petticoats, and well-fitting Belsham boots; and the qualities which make it so pleasant for cousin Jack to go blackberry-hunting are not always those which ensure the comfort and respectability of a home, or tend to the refinement and noble nurture of a family.

The summings-up of the fast young lady may be made in one word, vulgarity. She is not necessarily bad-hearted, nor necessarily less than pure and chaste; but she is essentially and in inmost grain vulgar—vulgar in speech, vulgar in habits, vulgar in mind; peer or commoner, rich or needy, inident with the insolence of worldly success, or bold and defiant in the midst of worldly degradation, she is always the same—vulgar. It does not matter what the difference in the outside wrappings. Her language is a jargon of slang, which, indeed, is the Shibboleth of her order, the pass-word that reveals her to her brotherhood; her dress is the tawdry finery of a savage, violent in colour and ungoverned in form; her manners are the manners of a horse-jockey, who speaks with the artificial polish of conventional society; and all that is held most dear and beautiful in womanhood, she wants in exact proportion to her acquirements in the art of "fastness." It is needful that these harsh truths be told her, and that she would learn to look into a mirror that does not flatter, for she has young sisters growing up about her, and it is of even national importance that the disease should be checked before it has spread farther. One of these young sisters is already "fast" on her own account; but she has adopted literature and social life in place of fun and bell-shaped petticoats; she has taken her stand as a staid, single-minded woman, and made her sister lectures on the degradation of her natural condition. She speaks at soirées with the artificial polish of a profile in a marked one—indeed as marked as her sister's—and will make a good photograph. The fast young lady and the single-minded woman are twins, born on the same day, and nourished with the same food, but one chaste and quiet and the other hidden grey; one took to woman's right to be despised and vilified for a day, and the other for a lifetime. The remaining profile is a marked one—indeed as marked as her sister's—and will make a good photograph. I know them both, and deprecate both as fair examples of our English womanhood.

THE GEOGRAPHICAL SOCIETY.

DIRECT ROUTES FROM INDIA INTO CHINA.

The continent of Asia, as every reader knows, is crossed by a great desert, extending from the Caspian almost to the gates of Peking and the Yellow Sea. To the south of this wilderness lies a region divided into northern and southern parts by the great chain of the Himalayas, and the lofty Nanling mountains, which run from its eastern extremity to the shores of the Pacific, opposite the island of Formosa. To the north of this mountain-wall are Tibet and China, separated by the Yangtze-Kiang mountains; to the south of the same barrier are the plains of Hindostan and the valleys of the Indo-Chinese countries, these two geographical zones being separated by the hills of Arnoo. Beyond the Trans-Gangetic peninsula there is a third region—the Malay archipelago. The character of each of these five areas, and the relations in which they stand to each other, must be clearly apprehended by any one who would understand the subjects discussed by the Geographical Society on Monday night. We shall not spend more than a few lines on making a few remarks concerning each. The first of the countries to which we referred was Tibet. It is a vast expanse of plains, hills, and valleys, rising from a table-land of 15,000 feet in elevation; as lofty, indeed, as the summit of Mount Blanc. Thrown up, in a mass, within a very recent geological epoch, by some stupendous volcanic force, we find embedded in its soil the remains of animals which still exist in the tepid plains of India. Surrounded on all sides by vast mountain-bulwarks, its lowest elevation seems to be at its south-eastern corner—at the point, in short, where it joins the Indo-Chinese countries, and whence they expand in long mountain-ranges, which spread out like the ribs of a fan to the Pacific. The mountain-system of the Trans-Gangetic peninsula is indeed a remarkable one. It is, perhaps, better explained by comparing it to an outstretched hand, of which the thumb represents the hills of Arnoo, the fore-finger the ridge which terminates in Malacca, the little finger the Nanling chain, running through Southern China north of Canton; and the wrist, the depressed edge of the table-land of Tibet, from which its waters are poured down into the Pacific, through valleys corresponding to the openings of the outstretched palm.

The Malay Islands lie beyond this region and form the third link in the chain of countries which separate China and India. Now Tibet is a desert of parched and frozen highlands, and the Malay Islands are a land of an ever hot and moist climate, in which the very exuberance of vegetable life has prevented the formation of civilized societies or a numerous population; while the intermediate countries in the south resemble the Malay Islands on the extreme north of the Tibetan highlands. From the depressed edge of the Tibetan plateau, the rivers which have come to the fore in the course of an outstretched hand, the river Irrawaddy descends on the west into the highly-cultivated and populous plain of Hindostan, studded with historical cities,

such as Benares, Delhi, and Calcutta. From the eastern side of the same neck of land there runs in the opposite direction the Yangtze-Kiang, through a broad alluvial valley, expanding into the plain of China, the richest, the best-cultivated, and the most densely-peopled region of the globe. A celebrated geographer, impressed with the vast importance of commerce as an agent of civilization, has shown the close connection subsisting between the extent of enclosed sea in each country, and its rank in the scale of nations. In our days, however, inland navigation by steam threatens to subvert his doctrine. We must now judge of countries by their permeability, rivers having acquired more than all the advantages of sea-coasts. What the Mediterranean and the Red Sea are to Southern Europe and Eastern Africa, the Brahmapootra and Yangtze-Kiang may be said to be to India and China. These rivers are seas rather than streams. "When we think of the Brahmapootra," said an eloquent speaker on Monday night, "the image present to the mind must not be that of an English stream, but that of Southampton Water or the Thames at Sheerness." No less gigantic is the flood of the Yangtze-Kiang, which is navigable, according to Captain Spry, by junks of fifty tons, up to the great bend, where it turns eastward. There is, then, an inland sea leading through the heart of Hindostan, and another inland sea leading through the heart of China, to an isthmus which may be compared to Suez or Panama. The possibility of constructing a route between these two rivers formed the subject of a paper read by Dr. McCosh to the Geographical Society, on Monday, in which he proved that such a route, if practicable, would be no less important as a line of traffic than the railway which connects the Mediterranean and the Red Sea, and the Atlantic and Pacific oceans. "Why should we," he says, "construct a great railway from Shanghai into the desert, when we could have a route which would open up a direct communication between the two most populous regions on the surface of the globe?" At present, however the information we have regarding the wild ravines through which the great Indian rivers plunge into the deep parallel furrows which lead from the Himalayas to the sea-board, is so contradictory and uncertain, that it is to be feared that the chance of a route being opened in this direction. There are, however, five lines of communication now existing, among which Dr. McCosh gave the preference to that by Munipuri. He advocated the formation of a scientific commission to survey and report upon these tracks, with the view to the selection of the best, and the prevention of intercourse between India and China, we are deeply interested in opening a direct route into Western China from the Bay of Bengal. A slight examination of the maps will show why. China proper is bounded on the north by the highlands and deserts of Mongolia; on the south by the snow-clad Nanling chain. On all sides it is enclosed by stupendous mountain barriers, excepting to the west, where no lofty chain, according to Captain Spry, separates its great bend from the Indo-Chinese countries; and to the east, where its great rivers cut the sea. Till very recently, the whole traffic between China and England was carried on at Canton, which is to all intents and purposes an Indo-Chinese port, by consequence of the interior character of the interior of the country. Mountains, while the traffic between the same central regions and Russia was conducted at Kiachta, a place equally remote, it being beyond the I-schan mountains and the desert of Schamo. More recently the eastern end of the great valley of the Yangtze-Kiang has been opened up, and the absence of steam, has penetrated but a small way up the Yangtze-Kiang. Its influence does not ascend farther than Han-Kow, where Lord Elgin's memorable expedition up the river stopped short. Now in the upper basin of the Yangtze-Kiang lie some of the finest provinces of China. Such is the case with the Abbe Hue, he says, "is such that the produce of a single harvest could not be consumed in ten years. On the hills are fine plantations of tea, of which all the most exquisite kinds are kept for the epicures of the province—the coarser sorts being sent to the people of Tibet and Turkistan." The western provinces of China have a population of upward of a hundred and twenty millions, with whom, at present, we maintain no intercourse.

The question of a direct route into these countries is, then, one of the deepest interest. But there are political as well as commercial advantages to be gained by driving a great highway into Western China from the Bay of Bengal. It has been shown by Captain Osborne, in an able address to the Geographical Society, that in the event of war with France, and of an alliance between that country and Russia, or even Spain, the enemy's cruisers could destroy our merchantmen among the narrow channels and reefs of the Eastern Archipelago, and thereby completely destroy our trade with China, in spite of the fact that the latter could block up their ports and provide coyness. Indeed, the importance of a western route into China is generally conceded. The question remains, however, whether it is practicable or not. This formed the subject of the paper of Monday evening, read by the Geographical Society by Captain John Spry. The speaker, in an exhibit of the map of the Indo-Chinese countries, from which he showed that the extremity of our territory in Pegu is within two hundred and fifty miles of Esmak, a town on the Chinese frontier. He proposes to construct a railway, or high road, along the banks of the Salween to the neighbourhood of Mon, and thence to join an existing line, which is already under construction, from the same point, thence to the coast, where both native and European, along the whole route, but these he did not read. They show, he assures us, however, that no engineering difficulties would interfere with the formation of a great road from Rangoon to Esmak, and from Esmak to the Yangtze-Kiang. Yunnan, the southern province of China, is, in fact, by quotation from Dr. Hable and Williams' "Middle Kingdom," an American work of the most valuable character, to be a rich mineral country rising towards the north into a wild mountain region, but sloping to the south into a country of rich pastures and open plains.

At present it appears that a great traffic exists over this tract between China and the Shan States, the Siam State, and Burman Shan States of Lim-mai Mon, conducted by great caravans of ponies, mules, and donkeys. This caravan trade Captain Spry probably considered conclusive evidence, without his itineraries, that the road and water communications through the province of Yunnan to Esmak must be good. Mr. John Campbell, however, continues to maintain that Yunnan is the poorest province of China, a land of mountains and floods, of banditti and savages, of everything that could impede and put a stop to traffic. He admitted that in an

important work on China, generally understood to be by him, in three volumes octavo, he had described it as a perfect paradise. Captain Spry read the passages in which his antagonist expressed opinions diametrically opposed to those now advocated by him in opposition to the proposed route. The contradiction was manifest. Mr. Crawford, however, extricated himself from this dilemma, with a dignity worthy of Sir John Falstaff. It was not he, said he, who wrote the work. His name was no doubt on the title page, but he was only the author of a small part of the book. The real author was an old clerk of his, one Peter Gordon, whose imagination had grown "rank" in the tropics. Why has Mr. Crawford not repudiated this work before? he stood toward Mr. Peter Gordon only in the relation in which the Chinese stand to the other, why has he not said so ere now? Can we now rely upon the Embassies to Burma, Siam, and Cochin China?

Mr. Crawford objects to Captain Spry's scheme as quite chimerical. The country over which the route passes must be a desert. "Why otherwise," he asks, would the Chinese emigrate to Australia, the United States, and the deserts of Tartary? This is no argument. As we might a Pekin geographer prove, that the Turkish empire is naturally sterile by showing that the Germans and English emigrate to America and Australia. "But what beasts of burden," asks Mr. Crawford triumphantly, are to be employed in these caravans? The Burmese horses are 13 hands high, the Burmese oxen are brutes even more degraded than English donkeys, and the Burmese mules are just what their fathers and mothers are. It would take, he adds, two donkeys and a half to carry one bale of Manchester or Glasgow goods. The simple answer to all this is, that our manufacturers must make smaller bales, just as they now do for the Lyons in South America, an animal with which Mr. Crawford is well acquainted. If the inhabitants of the interior of China have hitherto sent their goods on men's backs to Canton over the Meiling Pass, and in the same way to Kichou over the deserts of Shamo, they will have no difficulty in transporting them over the hills which divide the great level of the Yang-tse-Kiang, into the basin of the Salween. If this route had not been practicable, we do not believe that Captain Spry would have spoken so confidently of his information regarding it, and we anxiously await a second paper from him, in which he may embody those parts of his essay of Monday night, which describe the country lying along the route of the trade, from the Yang-tse-Kiang to the coast of India, derived from native travellers and the English officers, who have been in the immediate neighbourhood of Ennack.

PHOTOGRAPHY FROM A COMMERCIAL POINT OF VIEW.

Just one hundred years ago, Tiphaigne de la Roche penned one of the most remarkable forebodings of a modern discovery which the world has yet seen. In a singular book entitled "Giphantie à Balyone,"* he relates the wonders which were revealed to him in a vision by the chief of the geni of the elements. If there recounts how the attending geni would contrive to fix the fleeting images which were seen reflected in liquid water or painted on the retina of the eye; and after some details he describes how they at last succeeded in discovering a subtle adhesive liquid quickly drying, and capable, when poured on to a flat surface, of fixing there permanently, and in the twinkling of an eye, whatever nature the scene was presented before it. Awakening from his vision, Tiphaigne propounds three problems, which had been suggested to him by the geni, for the sagacity of mundane philosophers to unravel. The nature of the glutinous liquid, the method of preparation and best means of employing it, and the rationale of the action which was effected upon it by light. Never before, in modern ages, have we known of so clear an instance of a prophecy and its fulfilment. The account given by the geni is almost, to its minute details, the present system of collodion photography; whilst Tiphaigne's three problems, important as they have since become, are still very far from a satisfactory settlement.

Writing in 1760 the above could only be looked upon as a fanciful dream—the creation of an exuberant imagination. In 1860 we find it a sober unvarnished account of one of the most wonderful conquests which the human intellect has made even in this age of mental progress. Give the "subtle, adhesive, quick-drying liquid" of the old writer the modern name of "collodion," and employ glass or paper instead of Tiphaigne's woven fabric, and we have neither more nor less than that art which is at the present time brought so obviously before our eyes at every street-corner. Of the art itself in its present state of development, we shall hereafter speak; and now confine ourselves to the commercial revolution which it is quickly but surely effecting in some important branches of manufacture.

We all know what firm root photography has taken in its onward and visible manifestations; how our fashionable thoroughfares are gradually succumbing to its influence, while quarters apparently changing to crystal palaces, as far as the eye is concerned, and picture-galleries as regards their private doors. How royalty, statesmen, philosophers, and actresses are to be seen, à la carte de visite, in every shop window; to how utterly degraded a level the practice of photography has sunk in the estimation of some sections; how contumaciously Cornhill writers speak of the alacrity in sinking which the advent of a "cheap and obtrusive photography" occasions in a shabby-genteel lermee; and how other writers, class, having one's boots cleaned, eating a penny ice, and being photographed, as the three things which are in this modern age most honorably required of a man in the streets of London. How, on the other hand, no great devaluation, meeting, or economy can be allowed to come and go without photography being called in to perpetuate, as it were, a tangible, transmissible, memory of the occurrence; and lastly, how, on the occasion of the recent solar eclipse, the whole scientific world was looking with anxiety for the testimony of the photograph, which, it was universally admitted, was to set at rest questions and doubts with respect to the physical constitution of the sun, which might otherwise remain for ever unanswered.

The public cannot fail to give a passing thought to photography when brought so pointedly before them as in these cases, and some little interest is generally evinced when the account of any particular photographic tour de force finds its way into the newspapers. A short time ago it was proposed to

employ the powers of photography in the production of facsimiles of wills, settlements, deeds, conveyances, and other important legal documents. These were to be reduced to a microscopic minuteness (for instance we have seen one side of the Times reduced in this manner to the eighth of an inch square, still retaining perfect legibility under the microscope), and duplicate copies lodged in the most secure places of safeguard, to mitigate in the most effectual manner the inconvenience and loss which would be occasioned by a destruction by fire or otherwise of the original document.

The unimpeachable evidence of the photograph has likewise been on more than one occasion of service in our law courts; an inspection of its infallible record placing any case at once at its own standard, and thus saving the possibility of the contradictory evidence of a dozen human witnesses, each with a bias in a different direction.

The suggestion has also been made to employ this power of microscopic reduction in the arts of warfare. Suppose, for example, that two portions of the extreme line of an army met at a distance of one mile apart, and the communication being cut off by the enemy. A very simple arrangement would enable the fullest despatches to pass from one side to the other, without risk, and almost with the rapidity of electricity. The despatch is written, and a micro-photograph taken, which reduces it within the limits—if a long one—of a square inch. This is placed inside a hollow conical bullet, and the end closed with lead. The loading of a given signal would announce that a messenger was about to be forwarded; and with the accuracy which now distinguishes our rides, a commander might have his despatches delivered with a speed and punctuality to which no post-office has yet attained. In the case of a battle, the order of battle might be sent to the rear, between its inhabitants and an army approaching to relieve it, might be invaluable. In the same manner it has been suggested that micro-photographs of the most democratic article in the Times, or the most material woodcut in Punch, could be easily let slip deep into the jewelled bracelet of a British duchess, and thus smuggled through the best-guarded frontier of Europe.

And when accounts are received of a sanguine tourist having succeeded in photographing an execution with the head in the act of falling; or of another skilful experimentalist seeing a breaking wave on the beach and fixing it on his plate, with the cresting of the billows, and the spray of the sea, and when we hear of a shell being arrested in its flight and made to imprint its image as it issues from the monster 36-inch mortar, it is impossible to withhold our admiration for the marvellous powers of this physico-chemical art. At a whisper, too, of successful photographic forgery of bank-notes, some small excitement is caused in Threadneedle street; and on the other hand, when accounts are heard of £10,000 being annually saved in a Government department by employing photography instead of hand labour in the reduction of ordnance maps, the public are very ready to admit that the Sun is capable of more deeds than that of face-mapping; but few look beyond the surface and trace the revolution which is being effected in the power in the arts, manufacture, and commerce of the empire. In the first place, then, let us see what influence it exerts upon our current literature. In this kingdom alone, there are no less than six separate and independent periodicals, weekly, fortnightly, monthly, and quarterly, solely devoted to the publication of the written or printed words of the photographic world, and each well filled with advertisements addressed to its own circle of readers.

The aggregate number of the latter it would be impossible to estimate with any degree of certainty; but for several reasons we judge that they would be under-estimated at 10,000. The societies, or rather gossiping-clubs, as in every matter more appropriately be called, which are now so numerous, occupy not a few pages of these several journals, next claim our attention. One, at least, is to be met with in nearly every town of importance in the kingdom, the metropolis rejecting in no less than six, each having its president and officers, its periodical days of meeting, annual exhibition, and full dress affair.

Such being the amount and importance of what we may consider as merely ministering to the luxury of the art, how shall we find its necessities cared for. The manufacture of Tiphaigne's "volatile adhesive liquid" (collodion), given at the present time constant employment to some thousands, and has in the last few years more than quadrupled the demand for the chemicals employed in its preparation. The manufacture of the glass plates, which form the foundation for the popular and cheap positives, finds occupation for several glass works, where they are turned out by the thousand gross and ton-weight at a time, whilst other large manufacturers are constantly engaged in the considerable branch of consumer has fallen under our notice—those, like, gutta percha, earthenware, and paper. The apparently trivial article of no small importance, considering that one house in a single order has asked for a thousand gross. And quite recently, the germ of what must soon become another considerable branch of manufacture has fallen under our notice—that of photographic shirt-studs and waistcoat-buttons ornamented with microscopic miniatures. These are now being daily produced in countless numbers at the button-manufactories in Prussia; portraits of popular persons, Garibaldi for instance, being ordered by the hundred thousand at a time. To some taste-makers and clever manufacturers, the idea of photographing buttons has been the pretty fancy which some of these buttons contain, and we have heard amusing accounts of the flutter which has been created owing to the sudden demand for this latter commodity in the manufactures of these trinkets.

A consideration of the silver passing through the photographer's hands is, however, of far more importance than any of the preceding, if we think for a moment of the enormous amount which is thus consumed. From reliable data we estimate the amount of this precious metal used by photographers as not less than twenty tons weight per annum. The whole of this may be considered as withdrawn from commerce, and a great part of it is irretrievably lost to the world; for, in spite of the attempts on the part of some operators to collect the valuable residues, at least one-half finds its way down the sink, thence to the sewers, and ultimately to the sea, where it is likely to remain, unless the silver which is gradually precipitated upon the copper bottoms of ships may be considered as part of the contributions of extravagant photographers to the treasure of the deep.

As a medium for illustrating books the photograph has not hitherto met with the success which it deserves, the length of time required in printing, and consequently the expensive nature of this kind of embellishment, being

* Giphantie à Balyone. 12mo. 1760.

such as to prevent its general adoption. If, however, there be any truth in the accounts recently received of an American invention, by means of which photographs are to be printed at the rate of 12,000 per hour, another important revolution will be effected by the sun's agency, and we shall ere long see our illustrated newspapers adorned with photographs of the scenes for which they now have to depend upon the skill of the wood-engraver.

BALFE'S NEW OPERA AT COVENT GARDEN.

In this opera, *La Danseuse, la Breuvée*, Balfe appears in a somewhat new aspect. Hitherto his "line" has chiefly been the Opera Comique, and his music has generally been gay, light, and airy. His new work betrays; rather to the ground serious opera, or what the French call lyrical tragedy; and, in an entire absence of any of the style of which Balfe traces appear in his previous works. He has said aside to the French, and has turned himself to Meyerbeer. For our clever and popular countryman, with many merits, has not the merit of a distinctly-formed style and individuality of his own. He is a good singer, and his music is full of grace, beauty, and polish, readiness of thinking, and admirable skill in close imitation of the French style, and in the nature of the chameleon. His hues are bright, but they are variable and reflected from external objects; the external objects being the peculiarities of the composers whose works for the time engage his attention. This detracts a little from the grandeur of his style, and prevents him from standing in the full of his claim to a place among the great masters of the art.

With the view of this change of style Mr. Balfe has sought suitable materials to work upon, but he has not, we think, been entirely successful. He has found, with the help of Mr. Palgrave Simpson, a drama of the same large proportions and imposing aspect as the pieces produced on the stage of the Grand Opera. But its real tragic power and the amount of interest which it excites, are not in proportion to its pretensions; and the music-suffers, because, not being borne up by the strength of the subject, it seems exaggerated, and fails to make the designed impression. The occasional heaviness thus produced is the chief fault of the opera, though it is redeemed by great and numerous beauties.

The libretto is based on a forgotten melodrama of the once celebrated Monk Lewis, called "Rugantino, or the Bravo of Venice"; a piece which was popular in the day when Mr. Anne Radcliffe's romances were in fashion. The things are out of date now; our taste is changed, both literary and dramatic; and the story, which is a very good one, is not likely to find fitting audiences, they must be transported to the Surrey side of the river, or the regions of the Far East. The tediousness of this particular tale we shall not burden upon our readers; a slight indication of the subject will suffice. The Duke of Milan has a certain prince of Ferrara, between whom and the daughter of the Duke of Milan there is a love affair, and the Duke of Milan, a romantic gentleman—a male *Lepin Lupton*—who has no relish for a plain, prosaic wedding, but must have his nuptials seasoned with a sufficient quantity of difficulties and adventures, all of his own seeking. Accordingly, he sends his daughter to the court of the Duke of Ferrara, and then the story of a brigand chief, the terror of the country. Having contrived to satisfy his mistress, and expose her to needless danger of her life, only that he may rescue her from it; and having (which is really something worth while) brought about a conspiracy against the Duke, he thinks he has done enough, and brings about the death of the Duke. The Duke of Ferrara, who has been an adventurer or bravo, but the Prince of Ferrara, the *faisel* of the princess,

In all this there is nothing natural or real; nothing but a string of stage artifices and conventionalities. Our attention may be kept alive by a rapid series of incidents—we may enjoy the beauty of the music, the talent of the actors, and the brilliancy of the *apparatus*; but no deep interest is excited in behalf of any of the persons or events represented, inasmuch as they which express their passions and emotions, is deprived of its main strength, the strength which it derives from the sympathetic feelings of the audience. Look at "Norman," the "Sonnambula," the "Huguenots," say, "Ernani" or the "Foscari," and you will find the same weakness. The English composers exercise little judgment: they seem unable to discriminate between good and bad; and this defect, rather than the inferiority of musical talent, keeps them, even in the opinion of their countrymen, below their proper time.

Notwithstanding, however, the disadvantages under which Mr. Balfe has laboured, he has produced an opera which is not only successful, but deserves its success. His great experience, knowledge of the means of musical effect, and his happy choice of his art, have enabled him to adopt a style which, though not entirely new, is yet so judiciously adapted to the circumstances, that it is a most successful one. The music is full of rounded periods, resonant harmonies, and large masses of sound, have an imposing grandeur, of which there is little in his previous works; and his concerted pieces, full of dramatic action, are constructed with a masterly skill and effect. As in all Mr. Balfe's works, there are some of the most beautiful airs and ballads. Those which are likely to be popular are "My childhood's days," and "Twice my only thought," two charming ballads sung by Miss Louisa Pyne; a brilliant and impassioned song, "I may see him once again," also sung by her; an air, "The song of the nightingale," and a most animated song and choros, "Glorious wine," sung by Mr. Harrison.

If Mr. Balfe has not been altogether happy in the subject of his Opera, he has been completely so in its performance. Miss Pym and Mr. Harrison exert their whole powers, and the other principal parts are admirably sustained by Miss Threlwell (a delightful light comedian, as well as an accomplished singer), Mr. St. Albans, Mr. Laurence, and Mrs. Wharton. The libretto is nearly identical with those of the Royal Italian Opera, but never been so excellently executed there, and the scenery, decorations, dancing,—everything which belongs to the *grottesco*—are such as are seen only on the boards of Covent Garden.

GEORGE III.'S SAYING OF SCOTCHMEN AND IRISHMEN.—"I never knew," said George III. to an eminent statesman, "one Scotchman speak ill of another, unless he had a reason for it; and I never knew one Irishman speak well of another unless he had a reason for it."

PEKIN AND ITS ENVIRONS

The Great rivers in northern China are the Yang-tze-Kiang, the Hoang-ho, and the Pei-ho, which, descending from the highlands of Central Asia towards the same point on the shores of the Pacific, have formed a vast delta, extending in length 700 miles from the neighbourhood of the Great Wall southwards to the northern slopes of the Nanking chain, which forms a great barrier between the southern seaboard and the central provinces of the empire. This plain varies in width from 150 miles in the latitude of Peking, to 500 in the latitude of Nankin. It contains an area of 210,000 square miles, that is to say, it is seven times as extensive as the plain of Lombardy. It is traversed in its whole length by the imperial canal, a great work, connecting the three rivers above mentioned, which, constructed so early as the seventh century, has contributed to the greatness of the empire, in which it passes the most populous on the globe. The population of the Chinese empire is comparatively trifling; in fact, the area it covers, is no less than 170 millions; that is to say, nearly equal to one-third of the population of Europe.

In the south, the plain is traversed by the Yang-tze-Kiang and the Hoangho, the fertile alluvial soil abounds with fine trees, and produces magnificent crops of wheat, cotton, rice, and tobacco. It becomes more sandy and poor as it approaches Pekin; but, even in its northern parts, it is rich and luxuriant, and produces wheat and millet in the greatest abundance. The Great Wall, which separates the Map from the Plain, is a very extraordinary structure, to protect the fertile region we have just described from the incursions of the Tartar hordes, who wandered thence as they wander now, over the great desert of Central Asia. It is formed principally of earth, faced on each side with brick or masonry, and paved on the top with tiles. Its thickness at the base is twenty-five feet, its height from fifteen to thirty feet. The city of Pekin is, as appears from the Map, not more than thirty miles from the Great Wall. It is completely surrounded with walls forty feet high, and surmounted by a parapet deeply crenellated, so that the walls resemble the battlements of a castle. At the top, where the parapet is built, they slope inwards at some places by embankments, upon which horsemen can ascend to the edge, and ride along the wide surface at the top, which forms a roadway. Outside the wall are, at short distances, huge square towers. There are sixteen gates leading through it into the town. Over each of them is a water-tower nine stories high, and in each story are port-holes for cannon. The appearance of the city from the plain is very singular. The roofs of the numerous walled cities of Yangtsze, with their roofs, which, covered, however, with yellow, blue, and red tiles, or richly gilded, glitter brightly in the sun.

Pekin is divided into two great parts—the *Tartar city* and the *Chinese city*. In the heart of the former lies the Imperial Palace, or "prohibited city," and the pleasure-grounds surrounding it. The grounds within its inclosure are raised in artificial hills, on which great palaces are built. They are surrounded with canals and lakes, in which are small islands surrounded with kiosks and pavilions glittering among magnificent alder and poplar trees. The "prohibited city" is more minutely and systematically described by Father d'Almeida, one of the foreign Europeans who have seen it. The population of the "prohibited city" is very small. Outside of it is another inclosure, the "imperial city," to which admission is only accorded to persons known to the court. It is two square miles in extent, and is surrounded by what is called the *Imperial or Yellow wall*. In this and the preceding inclosure there are upwards of 200 palaces, all of great size. The *Tartar city*, properly so called, lies beyond the Imperial city. Near its southern end is the principal government office, and the residence of the *Chinese* and *Mongol* rulers of the *Manchu Empire*. On the wall, at the south-east corner stands the observatory, and near it the hall for literary examinations.

The "Outer, or Chinese city" lies to the south of the Tatar city. There are also two enclosures within the citadel, surrounding temples to Heaven and to Agriculture. The streets of Peking run in straight lines. Those of the greatest importance are from 140 to 300 feet in width and three miles in length. They are well aired, clean, and cheerful. The houses are of one story and are used in all the principal streets as shops, being adorned with wooden pillars, painted or gilt, behind which the goods are tastefully displayed. The houses crowd at all times along the thoroughfares. The streets are constantly thickened with brooms and wheelbarrows belonging to mechanics. A space, however, is left in the middle along which carts and strings of dromedaries, laden with coals, and funeral processions, are constantly passing and repassing. The private houses are never imposing externally, and do not open into the streets, but are reached by lanes, which run into the great thoroughfares, and which are locked up at night. The great majority of the people are very poor, and the government always has had great difficulty in quelling the mob, which is said to be very turbulent. The climate being severely cold in winter, the Chinese are very fond of warm food, and the fan is very rarely used, and the inhabitants therefore trust more to thick garments than to broad coats as the means of withstanding its effects. The population is estimated at 2,600,000.

THE TREATMENT OF THE BRITISH LEGION

To the Editor of "The London Review,"

SIR,—As in the infancy of the Legion you inserted in "THE LONDON REVIEW" an article which manifested a generous conception of its patriotic object, the remarks of your correspondent of last week are entitled to some notice on the part of promoters of the Legion, who necessarily limit themselves to replying to official mis-statements affecting its reputation, it being impossible, and undesirable if possible, to reply to all attacks upon it which political prepossession and ignorance of the history of the Legion may incite.

Your correspondent, "One who has just returned from Italy," must have enjoyed peculiar means of not knowing the truth. He is not aware of what took place on the field of Melazzo. English arms were wanted to turn the fortunes of

of the day, and well those who were there acquitted themselves. In many then-expected battles, Italy would have been proud of British aid, and grateful for it. If happily that day, when it came, was little required, let us not undertake the heroism which required it. Examine the unity of Italy have spoken gratefully of the design of the Legion; but let us note that the men did not go expecting their praise. No good is ever done which is not defamed by some one. He who desires a noble project on that ground will never stimulate the loftier sentiments of his race.

"One who has just returned from Italy" quite mistakes the facts of the career of the Legion. Consigned to one utterly incompetent to command, who had a military secretary quite as disastrously constituted, the Legionists were demoralized, starved, and goaded into disorganization. This was an accident that cannot happen always. Col. Poard refused a commissariat for the men. This monstrous fact, which accounts for anything ruinous, is not recognized, and seems unknown to your correspondent. The men expected hardships in the course of military duty; but they were not led to expect betrayal to absolute starvation, wanton and reckless abandonment to hunger, by one of their own officers and countrymen. Considering their treatment, the behaviour of the men has been admirable. Every officer who returns home, and has been an observer of what has taken place, testifies to the admirable qualities of the Volunteers, and with what ease ordinary good management would have secured the most satisfactory results. The heroic reticence of the men is not filling English newspapers with complaints in proof of their high qualities. The complaining has been done by correspondents gratuitously.

Dr. Bertani applied the money sent to him as Garibaldi sanctioned. To find fault with Bertani's disposition of funds is to find fault with the conquest of the Sicilies by Garibaldi; for, without the serene hopes which Bertani organized, and Mazzini found heroic men to constitute, there would have been no liberation of the Two Sicilies. Not sixpence of the money of the Legion ever went through Bertani's hands. Not £18,000, as your correspondent states, but £14,000, was the whole cost of the Legion to the Sardinian Government: which was incurred not by England but by Garibaldi's agents, and which the Garibaldi Special Fund Committee in London are endeavouring to raise subscriptions to repay. Mr. Isaac, who is harshly traduced as a Jew, acted throughout in an honourable manner. He did not seek the contracts. He did not make them. He accepted them on solicitation, when others were unable to fulfil them; and his application for payment was sanctioned by the London Committee, and was not made as represented. But I do not pursue these details. The remarks upon the cost of transport are utterly erroneous, and made in entire ignorance of the terms of the contract. No true Garibaldian regrets that the Legion went to Naples; he only regrets that it fell, owing to the inexperience of Lord Seymour (Colonel Poard's military secretary), under disastrous command. Every wise Garibaldian foresees the day when the British Legion will be needed again, and deplores the nervous and unjust tone taken with regard to it.

LONDON PRÆTOR.

NECROLOGY OF EMINENT PERSONS.

LORD ROSSMORE.

On Saturday, the 1st inst., at Rosmore House, county Monaghan, the Right Hon. Henry Robert Westmore, 3rd Lord Rosmore, in the 66th year of his age. The deceased nobleman was the eldest son of Warner William, second peer, by his first wife, Maria Anne, 2nd daughter of Charles Walsh, Esq., of Walsh Park, county Tipperary, and was born in August 1792. He was a Deputy-Lieutenant for Buteshire, and Lord-Lieutenant and Custos Rotulorum of county Monaghan, and represented that county in the Liberal interest. From 1820, with slight intermissions, till he succeeded to the title in 1842, on the death of his father, who had been created at Her Majesty's coronation a peer also of the United Kingdom. Lord Rosmore was twice married: in 1820, to Miss Ann Douglas Hamilton, a natural daughter of the 5th Duke of Hamilton and Brandon, who died in 1844 without issue. He married, secondly, in 1846, Julia Ellen Josephine, 2nd daughter of Henry Lloyd, Esq., of Parinore, co. Tipperary, by whom he had four daughters and four sons. He succeeded in the title and estate by his eldest son Mr. Henry Cairine Westmore, now 4th Lord Rosmore, who was born in 1851. The family of Westmore is of ancient extraction in Holland, and the first of his lordship's ancestors settled in Ireland, was Warner Westmore, Esq., who was a freeholder by act of Parliament, A.D. 1662. The Irish peerage of Rosmore was bestowed in 1798, on the Hon. Robert Cunningham, a General in the army, and Colonel of the 6th Dragoons, with remainder to his wife's nephew, the father of the nobleman so recently deceased.

LIEUT.-COL. HAMERTON, C.B.

On Friday, the 23rd ult., at 22, Lansdowne-place, Chelsea, aged 71, after a lingering illness, Lieut.-Col. John M. Hamerton, a gallant Peninsular officer. He was nephew, and the son of a friend, of the late Sir Wm. Hamerton, with the family of Earl Manservant. A brave soldier never served in the British army. He entered the service in 1806, joined the 95th regiment as second Lieutenant, and in that regiment when it formed part of Sir John Moore's celebrated division. He was taken prisoner at the battle of Corunna, and was sent to the 7th Fusiliers, with which regiment he landed at Lissien in April, and served through the campaigns of 1809 and 1810, and at the battles of Talavera and Buena Vista. He took part in the battles of Vittoria and Pampeluna, and in the Pyrenees, where he was wounded, and returned to England. He rejoined his regiment in 1815, and landed with it just two days too late to take part in the glorious and crowning battle of Waterloo. Colonel Hamerton was present at the Lines of Torres Vedras, at the siege of Ciudad Rodrigo, and took part in the affair of Roncesvalles, in every instance acquiring himself as a brave and gallant soldier. He was also present at the capture of Paris; and on the breaking up of the Army

of Occupation, in 1816, got the rank of Brevet-Major; but shortly after retired on half-pay; became Lieut.-Colonel in succession, and sold out altogether a few years back. For the above services, Colonel Hamerton received the silver medal with seven clasps.

SIR H. MARSH, BART.

On Saturday, the 1st inst., at his residence in Dublin, at an advanced age, Sir Henry Marsh, Bart., M.D., M.R.I.A., Physician in Ordinary to Her Majesty in Ireland. The deceased Baronet was the only surviving son of the late Rev. Robert Marsh, rector of Killyman, co. Galway; his mother was daughter of the Rev. Wm. Wolsey, and granddaughter of Sir Richard Wolsey, Bart., of Mount Wolsey, co. Cork; by Alice his wife, daughter of the famous Sir Thomas Molyneux, Bart., of Castle Dillan, co. Armagh, Physician-General to the army in Ireland. His great-grandfather, who was Archbishop of Dublin, and married a daughter of the learned and eloquent Bishop Jeremy Taylor, represented an old settled at Edgeworth, in that county, the baronetcy in 1838. He married, first, Anne, daughter of Thomas Crowe, Esq., of Ennis, co. Clare, and widow of William Arthur, Esq., by whom (who died in 1816) he had a son, Henry, major in the 3rd Dragoon Guards, who now succeeds to the title. Sir Henry married, secondly, in 1856, Mary, only daughter of the Rev. Robert Jolly of Portlanning, and widow of Thomas Kemmis, Esq., of Sharn House, Queen's co., Ireland. Sir Henry Marsh traced his descent up to the brother of Archbishop Chicheley, and to the sister of William of Wykeham, and consequently enjoyed the privileges of a "Founders' Kin" at All Souls' and New Colleges, Oxford.

LADY A. MURRAY.

On Thursday, the 6th inst., at Ochertyre, Perthshire, aged 48, the Lady Adelaide Augusta Lavina Keith Murray, wife of Sir William Keith Murray, Bart. Her Ladyship was the youngest of the four daughters of Francis, Earl of Mar, afterwards Marquis of Rockingham, of the earldom of India, by Flora, Countess of Loudoun, in her own right, and sister of the late Marchioness of Bute, Lady Selina C. Henry, and the late Lady Lady Flora. Her Ladyship was one of the Ladies of the Bedchamber to H.R.H. the Duchess of Kent. Her Ladyship, in July 1854, became the second wife of Sir William Keith Murray, seventh and present Baronet, of Ochertyre, the eldest son of the late Sir Patrick Murray, one of the Barons of the Court of Exchequer in Scotland.

LADY HERBERT.

On Thursday the 29th ult., at Florence, Lady Herbert, widow of the late Sir C. L. Herbert, Bart., in the 76th year of her age. Her Ladyship was Anne, daughter of the late Humphrey Henry Vane, Esq., of the city of Bristol, and married in 1812, Sir Charles Lyon Herbert, M.D., who was knighted in 1836, and died in 1855, at Florence, where he had lived for many years after retiring from his wide and extensive practice as a fashionable physician at the West End of London.

HON. MRS. FOLEY.

On Sunday, the 2nd inst., at Prestwood, near Stourbridge, aged 36, the Hon. Mrs. Henry T. Wentworth Foley. The deceased lady was the Hon. Jane Frances Anne, daughter of the late General Sir Richard Henry Vivian, G.C.B., afterwards Lord Vivian, by Eliza, daughter of Philip Champion de Crespigny, Esq., of Alborough, Norfolk. She was born in May 1824, and married in December, 1851, Henry John Wentworth Foley, Esq., M.P. for South Staffordshire, only son of J. H. Hodgkiss Foley, Esq., M.P. for East Worcestershire, cousin of Lord Foley, by whom she has left issue a son, Paul, born December, 1857.

WILLS AND BEQUESTS.

Claude Joseph Alexandre Marquis de Brachet, de Peyrussac, de Fioresse, residing in Rue Neuve des Mathurins, in the city of Paris, Knight of the Royal and Military Order of St. Louis, having died possessed of property and securities in this country to the amount of £15,000 personally, became necessary to prove his will in the London Probate Court, and the testamentary documents bearing date respectively 1844, 1850, 1857, and 1859, were thereupon translated from the French language into the English, and were administered to on the 10th of the present month. The marquis has disposed of his property in the following manner: His late nephew, Count de Brachet, who was the principal legatee, having died previous to the testator, he has bequeathed the "usufruct" to the Countess de Brachet, the widow of his nephew; she takes the great as the mother and guardian of his, the testator's, grand-nephew and grand-niece, to whom the marquis has left the ultimate residue of his property. There are several legacies and annuities to his friends and to his dependents. The will is in the marquis's own handwriting, and there is a very remarkable circumstance alluded to by him with reference to premature interment, which is thus stated—"My uncle having been nearly buried alive, was several times discovered by my father to have resumed his senses, and lived for fifteen years afterwards. Believing that many persons are so interred, I request that I may be watched until the seventh day, then an incision to be made in my left chest, and my body opened without delay; and if I am found to be dead, my body being observed, I direct the sum of 2,000 fr. be given to the poor of the parish."

William Franks, Esq., F.R.S., of Woodhill, near Hatfield, Herts, died at Brighton, on the 14th of November last, aged 72, having made his will on the 1st of September, 1855, with a codicil in 1859, and another in 1860, appointing as his executors the Rev. Edward Francis Hodgson, M.A., rector of Stilton, with Bickering Lincoln, the testator's nephew, and William Franks, Esq., the testator's eldest son, to whom probate was granted by the London court, on the 8th of the present month. The personal property was sworn under £30,000. To his eldest son he has devised his real estates, subject to certain annuities and

Rebels of Books.

THE ASIAN MYSTERY.*

charges thereon, and has appointed him residuary legatee of his personality, he also receives a sum of £15,000 under a marriage settlement, in which the testator took a life interest, having survived his wife five years. To his son, the Rev. Edward Robert Francis, rector of Downham Market, Norfolk, he leaves the sum of £4,000, and the right of presentation to the living of Downham Market, annual value exceeding £400; he has also bequeathed to him several articles of plate, his bronzes, gips, and other specific bequests. To his daughter, Jane Caroline, he bequeaths the legacy of £1,000, in addition to £5,000 already bequeathed, and he also left many specific bequests. There are liberal bequests to his servants. This gentleman, who maintained an elevated position in society, had graduated at Trinity College, Cambridge, and took the degrees of B.A. and M.A. He was also a magistrate for the county of Hertford. His son and heir, William Francis, Esq., married a daughter of the late Major-General John T. Jones, Bart., K.C.H., was called to the bar in 1846, is also a magistrate for Hertford, and for Middlesex.

Baron Dickinson Webster, Esq., of Penna, Sutton Coldfield, Warwickshire, died on the 4th of August last, at the age of 42. He will leave about the 25th of December last, and a codicil in January, 1860, which were proved in the London court on the 27th of last month, by two of the executors and trustees, Henry Fox Britton, Esq., and Charles Cooper, surveyor, of Sutton Coldfield; to the latter he leaves, for the period of three years, the annual sum of £50, and £30 a year for the following ten years, for the trouble he will have in managing the estate. The other executors appointed are the relict and Peter Charles L. Webster, Esq., the testator's brother; to Mr. Webster and to Mr. Britton he leaves each the sum of 50 guineas to purchase some token of remembrance of him. The personality was sworn under £12,000, which amount is exclusive of freehold. He leaves to his relict an immediate legacy of £300, together with certain annuities and contingent legacies, and a residuary estate, and a codicil, and other effects, for her own use absolutely, and a life-interest in the library of books and the plate, and in the annual proceeds arising from the residue of his real and personal estate. The testator directs that the sums of £5,000 and £2,000, and is to be invested for the benefit of his children and his daughter until they are of age, and to his daughter he has left the rest of the jewellery. On the demise of the widow, the residuary estate is to be divided, under certain stipulations, amongst all his children. The testator was Deputy-Lieutenant for the county of Warwick, also a magistrate for that county and for Staffordshire, and held the rank of captain in the Staffordshire Yeomanry.

General Sir Henry Wyndham, K.C.B., M.P., of Cockermouth Castle, Cumberland, died possessed of personal property to the amount of £700,000. He had made his will on the 17th of July, 1859, and in it he made his only son his adopted daughter, Georgiana Paula, wife of Charles Wyndham, Lieutenant 9th Bengal Light Cavalry, as well as all his personal estate, to her and her heirs, &c., absolutely, and appointed her sole executrix. This lady, the sole legatee, died in 1858, and no other will having been discovered, the administration of her estate was granted, annexed, were granted to Sir Henry's relict, Elizabeth Lady Wyndham, the estate having to be divided under the statute of Distributions. Sir Henry entered the army at the early age of 16, served during the memorable campaign in the Peninsula, and at Waterloo. The last portion of his life he represented Cockermouth and West Cumberland in Parliament.

David Jardine, Esq., one of the Magistrates of Bow-street Police-office, of Cumberland-road, Hyde Park, died on the 13th of September last, at his country residence, Weybridge, Surrey. His will was proved in the London court on the 27th of last month, by the executors are his wife and the Rev. John Gryll Lonsdale, M.A., Canon of Lichfield; the latter also has taken the grant of probate, the wife having died previous to the testator. The will is short, and entirely in Mr. Jardine's own handwriting. He devised his real estate to his wife, bequeathing to her also his personal property; the latter estimated for probate duty at £14,000. Mr. Jardine made no further disposition of his property since the death of his wife, who was the sole legatee, and the only person who would have derived any benefit under the will. Owing to this circumstance, the estate has to be divided in pursuance of the statute of Distributions.

Lady Macdonald, formerly of Arlington-street, Piccadilly, who died at Dolesconner, France, on the 16th of October last, had made her will on the 6th of September, 1856. She appointed her sister, Lady Malcolm, sole executrix, who proved the will, with a codicil, in the London court on the 25th of last month. Beginning at the root, every one of these creatures would round by the thin rim of a creeping plant, giving it the appearance of a piece of twine. The curls are left exposed for about two inches, and curled and curled. This curious collection of six hundred locks of hair is thrown back over the forehead, and hangs down the back, every one of these curls is a separate and round a semi-circle of curls from ear to ear, or from shoulder to shoulder. Viewed at a distance you imagine that the man has got some strange sort on, made of whip-cord. It reminds one of the Egyptian galleys in the British Museum, and strikingly comes with the illustrations in the "Arabian Nights." Lady Macdonald, also, hanging down in lots of little curls, two or three inches below the chin, which are to be seen in engravings from the Assyrian sculptures, are precisely what is to be seen at the present day at Tanna. Dr. Livingstone has found something like it in South Africa, and in the South Sea Islands.

HAIR-DRESSING IN POLYNESIA.—CURIOUS CONCOINCE.—"There is," observes the Rev. Mr. Turner, in his work on Polynesia, "something quite unusual in the way the men do up their hair. They wear it twelve and eighteen inches long, and have it divided into nine six or seven hundred little locks, or tresses. Beginning at the root, every one of these curls is a separate and round by the thin rim of a creeping plant, giving it the appearance of a piece of twine. The curls are left exposed for about two inches, and curled and curled. This curious collection of six hundred locks of hair is thrown back over the forehead, and hangs down the back, every one of these curls is a separate and round a semi-circle of curls from ear to ear, or from shoulder to shoulder. Viewed at a distance you imagine that the man has got some strange sort on, made of whip-cord. It reminds one of the Egyptian galleys in the British Museum, and strikingly comes with the illustrations in the "Arabian Nights." Lady Macdonald, also, hanging down in lots of little curls, two or three inches below the chin, which are to be seen in engravings from the Assyrian sculptures, are precisely what is to be seen at the present day at Tanna. Dr. Livingstone has found something like it in South Africa, and in the South Sea Islands.

ATROCIOUS NOTICES IN TAVNA.—The savages of Tanna, we are informed by the missionary clergyman, the Rev. George Turner, have the heavens portended into constellations. They have the canoe with its outrigger; the duck; and a man near it with his bow drawn, and taking his aim; the cooking-house together with the company of little children all sitting out, and many other objects. These constellations form their astronomical clock; and by looking up they can tell you whether it is near morning or midnight. Then they have their traditions as to how these canoes, and ducks, and children got up to the heavens."

LABOUR is not always rewarded by the results, to gain which the toil was commenced and undergone. This is often discouraging; but there is consolation in the fact that no good efforts are entirely unproductive, and they leave no doubt even if the result is not always what we expected. Of no kind of labour can this be more frequently recorded than that of the missionary in foreign, imperfectly civilized, or wholly barbarous, lands. Those to whom he is sent, may not receive so readily, or extensively, as could be wished, the good news of the Gospel; and he is often obliged to leave the field of his mission, and to seek for other opportunities of doing good. The missionary in foreign lands, however, has not only received our knowledge of the waste places of the world. To such knowledge this volume is a remarkable contribution. It is the result of the observation and research of a clergyman who spent many years among the nomadic tribes of Syria, associating constantly with a section of the inhabitants who have for many ages preserved a peculiar creed. It is neither Christian nor Mahometan, yet includes some of the tenets and practices of both, strangely blended with something of a Paganism more ancient than either. It includes a Persian origin of the race or tribe, and contains distinct traces of Buddhism in a belief in the transmigration of souls. It cannot be imputed as blame to the author that the seed falls on a stony soil, where, "having no root, it withereth." And we gather by inference, for it is not distinctly stated, that Mr. Lyde's labour of many years, was not a thankless one. A faint hope for the future is all he ventures to express. But the opportunity of tracing the history of such a race, and investigating so singular a creed, has been well employed.

The work is especially interesting at the present time; it was written before the outbreak of religious fanaticism in Syria started Europe with a tale of sanguinary horrors. The author, we regret to learn, died at Cairo, in the spring of the present year, and his work could not be coloured by the dreadful events that have since occurred. Yet without predicting it, few events so important as the very thing which is the widest of the widest of the world, the Christians and Mahometans; and the hatred of each sect for all the others, is fierce and unextinguishable, or to be quenched only in blood. The feeble Turkish Government has now been roused, by England and France, and has sent an expedition to Syria, but before this expedition its authority was either nominal, or so apathetic, as to furnish no restraint to the wars of tribe with tribe. Its contempt for the "dages" of every creed differing from that of Islam, was complete. Like Iago, it was quite indifferent which of the opponents was exterminated, and it cared not for the result, but for the power beyond the control of its official selectors; the Druses appeared to have the decided advantage, and pashas and governors, almost disposed to indulge that hatred of the Christian name, which is the most active form of Moslem zeal, joined the winning side. But Syria, startled at the sight of the Oriental sword, and the Christian name, has intervened, and the central government has been compelled to act in repression and punishment of what it had long viewed with criminal indifference. We notice here later events, in connection with Mr. Lyde's work; for those who do not read the book, may be interested to know that the Syrian Maronites cannot be clearly understood without the information the "Asian Mystery" abundantly supplies.

In the century from whence Christianity spread over the civilized world it began early to be corrupted by mixture with strange doctrines, gathered from the Egyptians, the Arabian idolaters, even from the Persians and Hindoos. Sects arose, and the people of the East, who were still Christian in name, but in fact, were no longer so. The Greek Church, which was the most active form of Moslem zeal, joined the winning side. But Syria, startled at the sight of the Oriental sword, and the Christian name, has intervened, and the central government has been compelled to act in repression and punishment of what it had long viewed with criminal indifference. * The Asian Mystery. Illustrated in the History, Religion, and Present State of the Assassins and Fumars of Syria. By the Rev. Samuel Lyde, M.A. Longman & Co.

posed some hymns, and attempted to establish schools. But, as they had an almost insuperable aversion to deal with *Fe*, could be induced to attend the schools, and none would come and live with them as servants. At first, it was still more difficult to manage the girls than the boys; although Mrs. Turner and Mrs. Nisbett did eventually succeed in teaching some of the young women needlework. Before the novelty of the first Sabbath or two there was no getting a congregation; and there was no mode of inducing the people to refrain from labouring on the Sunday. Here is the way in which the natives argued on the matter—

"They thought, that as their own gods (the *dai*l's spirits of their ancestors) only required the offering of a few things once a week as a *pu*, they might venture to make less than a whole *day* out of every seven days as their own *pu*."

There were two main impediments in the way of the new missionaries. The first, that every two or three villages formed a distinct community—a petty nation in itself—exercising the rights of war and peace with its adjoining neighbors. Consequently it was difficult to work with them. Next, that these small villages, though not more than five or six miles from the base of the mountains, were so far quite a different district from that which they had acquired at Tanna. Thus to travel from one tribe to another was to expose a Christian missionary to instant death; and thus, when the danger had been incurred and escaped from, his presence was of no avail, for neither he nor the savages could understand one another—they spoke different languages.

On more than one occasion both Mr. Turner and Mr. Nisbett escaped, as by a miracle, from the attempts made by the savages of hostile tribes to assassinate them. No peril terrified these English clergymen, and no difficulty daunted them; and yet they had eventually to fly from Tanna. The cause of their overthrow was this—they had interfered with the livelihood of certain charlatans, who were known by the name of "disease-makers."

The operations and practices of these wretches is so like what we read respecting the practices of wizards, necromancers, and magicians in the dark ages of Europe, that the following account given of them by Mr. Turner cannot fail to be read with interest:—

[illegible]

The spread of Christianity threatened the annihilation of this unholy traffic between the West and the wilderness. Those who profited by the destruction of the Indians' lives and property were determined that they would not be persuaded the various tribes of savages and the missionaries that they were the only way had spread amongst them, was the doing of the Christians, and the only way of freeing themselves from pestilence and death was by killing the strangers.

The perils of the missionaries, their wives, and attendants, were great, and their sufferings terrible. Happily they were saved from martyrdom by the providential arrival of a Holston Town whaler, which conveyed them from Tanna to Saevaka.

What was done at Samoa is to be learned from this volume. We have but quoted so much of the adventures of the missionaries as an inducement to our readers to procure the work for themselves. They will find it a delightful book whether they take it up from curiosity, or from a higher feeling.

THE MONKS OF THE WEST.*

ROME, the Pope, his cardinals, and his court, have been so continually assailed lately in all modern publications that it is rather a remarkable fact to find one of the greatest and most celebrated literary men in France writing a work of considerable extent (6 vols. 8vo.) of which the object is the re-habilitation of the monks and the Papal authority.

If Count de Maillebois were only known as a staunch adherent to the Roman Catholic faith, his book would probably excite less attention; but as he is at the same time an eloquent and learned author, and a great political champion, the two first volumes of his history have created much room in Paris. In the first volume, he has shown the monks to have been the authors of the French revolution; he has shown how they have been the cause of the destruction of the liberties which they themselves have served rendered by the monks to Christianity and to the civilization of Europe by their charity, laborious industry, and their merciful intervention towards the oppressed serfs and the owners of the soil. On the other hand, as a faithful historian, he frankly relates the vices and even crimes of which the monastic order has been accused, and which he has endeavored to prove to be of a similar nature. In support of this assertion the author quotes a remarkable concession from the pen of Voltaire, that inveterate enemy of the monastic order. In one of his great historical works, "Essai sur l'Esprit et les Mœurs de la Nation Française," Voltaire writes, "On ne peut nier que par suite de la dévotion, les hommes ne fussent devenus plus réguliers, plus sages, plus industrieux, et que par conséquent les mœurs ne fussent devenues plus vertueuses." It is, nevertheless, certain that vice abounds to a far greater extent in secular life, and the greatest crimes have not been committed in convents, but immunities appear in an exaggerated light when placed in contrast with the strictness of the monastic life. The crimes of the monks are, therefore, not the worst ever existed but have been entirely free from reproach."

Count de Montalembert commences his history in the year 312, at the period when the Emperor Constantine proclaimed Christianity throughout the Roman empire, and he establishes a curious parallel between the invasion of the barbarians and the establishment of the monastic orders. "The Roman empire without the barbarians," says he, "was an abyss of slavery and corruption. The barbarians without the monks would have been a chaos. The barbarians and the monks, combined, constituted a new world, a universe of Christianity."

Then follows a vivid and interesting sketch of the monastic institutions, from

the *Thébaïs*, or residence of the Fathers of the Desert (*les Pères du Desert*) to the end of the sixth century, when St. Benedict appeared.

The various dramatic episodes contained in this work, the beautiful delineation of manners and customs, and the graphic descriptions of the lives of St. Paul, St. Gregorius of Nazianzen, St. Chrysostom, St. Augustin, St. Martin, and of the first noble Roman ladies who embraced monastic life, present a picture scarcely excelled in pathos and interest by the first writers of romance and fiction.

The author narrows in interview of the monk Severinus, who lived on the borders of the Danube with Odacoe, king of the Héruli. When the borders of the empire were so narrow, the emperor Valentinian III. was obliged to frequently limit on their way to ask the blessing of those men renowned for their piety, whose lives spent in solitude and prayer made them objects of universal veneration. One of the Héruli, a young man clad in a wolf's skin, but of noble birth, was called Severinus. He was a hermit, who dwelt in a cave near the cell of the anchorite, came to ask the advice of Severinus with regard to his future course. "Go," said the monk—"Go towards Italy; thou wilt never see me again." "Why should I go?" said the young man. "I have no other wish than to be liberally to all." This young man was Odacoe. At the head of the Héruli he took and sacked Rome, sent Romulus Augustulus, the last Emperor of the Western Empire, to die in exile; and disclaiming the title of emperor for himself, was satisfied with the title of king. He was afterwards slain by the emperor Justinian. The advice of the poor monk on the Danube, and wrote to desire him to make any request he chose. Severinus, in reply, merely asked for the pardon and restitution of his cave.

The second volume opens with the life and labours of St. Benedict, born in 480, of the illustrious Roman family of the Anicii. At fourteen years of age he left his home and retired to the wild mountains, where flows the river Anio, about fifty miles west of Rome. There he spent three years in such complete solitude that some shepherds who accidentally discovered his retreat, took him at first for some wild animal.

In order to appreciate the descriptive talent displayed by Collo de Montseniadre, one should read, among other amazing episodes of the life of St. Benedict, his interview, in 542, with Totila, King of the Ostrogoths, who defeated Belisarius, and conquered Italy and Sardinia. For the benefit of those who take delight in the story of the life of the great monk, I will give a brief summary of the interview and his sister. He and Scolastica were born on the same day, and loved each other with a devotion for which twins are often remarkable. When Benedict retired to the monastery of Monte Cassino, Scolastica followed him, and founded with him a convent of twelve nuns. She lived with him for more than thirty years, and one year, and prayed together in a shepherd's hut in the valley between the two convents. One day the sister, having a secret foreboding that she should see her brother no more, begged him, after the evening meal, to spend the night with her. He refused, saying that he must go to bed, and that he would be obliged to be out of the convent after dark." Scolastica, full of sorrow, laid down her head on her clasped hands, which rested on the table, and wept and prayed with fervour. The weather had been calm and bright; but suddenly a violent tempest arose, and the wind howled so furiously that the convent was shaken. Benedict now his companion could by any means leave the shelter of the hut. Seeing this, Benedict said to his sister, "What hast thou done? May God forgive thee!" "Yes, even so," she answered; "I prayed to Him; He knew my heart, and He has heard me." She then turned to her brother and said, "I am forsaken, Benedict and Scolastica separated at sunrise, and the two sisters never met again in this world. Three days afterwards, while standing at the window of my cell, Benedict had a vision wherein he beheld the face of his sister, seeming to call to him, and saying, 'Come, my dear brother, I am waiting for thee.' I went to Monte Cassino, where they were laid in a tomb prepared by the brother for himself and his sister, in order that death should not divide the bodies of those whose souls had been so long united in the love of God. Forty days later

It is to St. Gregory we owe this touching little episode, and he adds that doubtless for the sake of Scholastica's great sisterly love, which occasioned her grief, was her prayer so visibly answered. For is not love the ladder to heaven whose base God has placed in the human affections?

The author proceeds to give a history of the monastic orders in Italy and in Spain during the sixth and seventh centuries; he describes the conquest of Gaul by the Franks, and the civilising influence of the monks on these barbarians. From the depths of their wild forests were heard pious voices chanting the beautiful canticle of Isaiah, "Ye shall go out with joy, and be led forth with peace: the mountains and the hills shall break forth before you into singing, and all the trees of the fields shall clap their hands." &c.

The end of the second volume contains the romantic lives of St. Patrick and of St. Columbanus. The first, stolen by pirates, was sold in Ireland as a slave, and underwent every sort of hardship as a cattle-driver, before he returned to the country as a bishop, to preach Christianity. The second, St. Columbanus, abandoned the luxuries in the midst of which he was born, and undertook through Europe an *Odyssey* of his own, but almost as interesting and as varied as the

Although the subject chosen by Count de Montalembert may not at first sight seem a popular one, we have not for many years met with so readable and pleasant a work from the French press.

CHRISTMAS BOOKS.

THERE is nothing more indicative of the great changes that has taken place in the manners of this country, than the mode in which the festival of Christmas is now observed. The spirit of merriment and the feelings of good fellowship have not abated one jot. There is still the old Scandinavian fervour which disported itself in the Yule-tide season, before the presiding of the Gospel had been proclaimed; but the love of the poor, which was then the chief aim, is still the old hospitable, bountiful, and generous spirit which sent round the wassail-bowl, and threw open the door of the beehive hall at Christmas-tide to rich and poor; there is still the same martial, innocent, cheerful ardour which confers a high privilege upon the midwife, and the same hearty and generous spirit which has enshrined with the dark leaves of the ivy, and glistering with the red berries of the holly. The spirit of "Old Father Christmas" is stout and strong as ever, but the manner of observing his festival has changed. Instead of good cheer and high spirits, the merriment is now a pale, cold, and unbecoming mimicry of the drama and the novel; there is a communion in the Row;—the publishers are busy with authors and artists, and the result is the issuing forth, day by day, of such gorgeous "Christmas Books," that the splendours of medieval Christmas are completely dimmed, its noisy mirth quelled, and its religious spirit, by a more than a hundred fold, more of extermination.

Christmas books are decidedly a modern invention. Why have our makers

* Les Moines d'Occident, depuis St. Benoît jusqu'à St. Bernard. Par le Comte de Montalembert, 2 vols. 8vo. Paris: Lecoffre. London: P. Nutt. 1860.

have most recently appeared are not unworthy of her name. "The Hungarian Love-Song," a tender leave-taking between a young soldier going to the wars and his sweetheart, is simple and expressive. The words are a dialogue between the pair, but it is meant to be sung by a single voice, not as a duet. "The Brook" is a graceful setting of Tennyson's well-known verse. The air, like the words, is quaint, and the murmur of the brook is well imitated by the accompaniment. "Janet's Bridal," the simple tale of a village girl, is pretty, but its simplicity is marred by the formidable inharmonious change from four flats to four sharps in the middle of it—a little bit of pedantry wholly uncalled for. "The Mother's Farewell" is full of melody and feeling.

THE IVY AND THE BELL.

A LEGEND OF CLYDELL TOWER.

In days when Alfred ruled the land,
As ancient legends tell,
The Ivy was a gardener's lad,
And loved a lady well;
And the Bell that hangs in the turret high
Was the lady pure as snow,
The only daughter of an Earl,
A thousand years ago.

That lady fair, so bright and rare,
Had suitors many a one,
Both knights and carls, and knaves and churls;
But she loved the gardener's son.
They pledged their faith, in life or death,
In happiness or woe,
And seal'd the promise with a ring,
A thousand years ago.

The grim earl read his magic book,
And lo! he bared his sight,
The deeds they did, the love they laid,
Were clear as morning light.
He swore an oath to slay them both,—
The maid for looking low,
The gardener's lad for looking high,—
A thousand years ago.

By magic might he changed the lad
Into an Ivy flower,
And the lady bright to the booming Bell
That swings in the doxy-tower.
"Be this," quoth he, "the doom they drew,
Who guiled a father so!"
And the grim earl burned his magic books,
A thousand years ago.

But every time the Bell was rung
The Ivy spread and grew,
"Climb to me, climb!" said every chime,
"O Ivy! ever true!"
And the Ivy clomb an inch a day,
As never did Ivy grow,
And rock'd the Bell and cover'd it o'er,
A thousand years ago.

A mortal hand ne'er rang the Bell,
But up in its turret high
It peal'd sweet tones, like Nornland runes,
To the breeze that wander'd by;
And every year at Christmas Eve,
As winds begin to blow,
You may hear it ring—as oft it rang
A thousand years ago.

Sometimes merry, and sometimes sad,
But always sweet and clear,
And all who listen dream of Love,
And the hearts they hold most dear,
For Love's the name, and ever the name,
Though ages ebb and flow!—
O Love, be happier than thou wert
A thousand years ago!

WAR THE RULE OF SAVAGE LIFE.—"All the men go about armed. When at work in their plantations their arms are never out sight, and at night they sleep within reach of their clubs. Even the little boys must have their tiny clubs and spears, and bows and arrows, and always go about ready for a quarrel." Such is the Rev. Mr. Turner's description of the savage inhabitants of Tonina. "War," he says, "is the rule, peace the exception. They were fighting during five out of the seven months we lived among them. There is ample proof that war is the enemy of civilization, and the element of savage life. We were never able to extend our journeys above four miles from our dwelling. At such distances you come to boundaries, which are never passed, and beyond which the people speak a different dialect. At one of these boundaries actual war will be going on; at another, kidnapping and cooking each other; and at another, all may be peace, but, by mutual consent, they have no dealings with each other."

LIST OF NEW BOOKS AND NEW EDITIONS.

FROM DECEMBER 7th TO DECEMBER 13th.

- Archerman (Dr. A.). The Christian Elements of Plato. 8vo. cloth. 7s. 6d. Hamilton.
Barn (H. R.). The Poems of Erasmus. 12mo. cloth. 1s. Routledge.
Barn (H. R.). Birds of Europe. Vol. II. Royal 8vo. 17s. Grinnell.
Bright Gales for the Young. 12mo. cloth. 6s. 6d. Blackwood.
Bleeker (H. R. G.). David, King of Israel. Crown 8vo. cloth. 1s. 6d. J. F. Shaw.
Bretley's Turf Guide and Racing Register, 1861. 6s. 6d. Baskin.
Burns (R. L.). Year-Book of Agricultural Facts for 1860. Fcap. 8vo. cloth. 3s. Blackwood & Son.
Bicknell's (R. L.). Family Prayers for Six weeks. 12mo. Thistle-Thorned. Baskin.
Barney (Miss A. M.). Star in the East. Fcap. 8vo. cloth. 1s. 6d. J. F. Shaw.
Below is the Wood. Illustrated by the Marchioness of Waterford. Square cloth. 4s. Love & Son.
Brightwell (C. L.). Difficulties Overcome. Fcap. cloth. 2s. Love & Son.
Bible of Every Land New Edition. Half-crown. 42s. Baskin.

The Magazine for the Young for 1860. 12mo. 4s. 6d. J. F. Shaw.
The Monthly Packet. Vol. XX. 12mo. cloth. 2s. 6d. J. F. Shaw.
Wilson (G.). Memoir by his Sister, J. A. Wilson. 12mo. 1s. 6d. Baskin.
Wilson (F.). Political Beliefs of the 17th and 18th Century. 2 Vols. Fcap. 8vo. cloth. 1s. 6d. J. F. Shaw.
Whispering Voices of the Yule. 12mo. cloth. 2s. 6d. Baskin & Oley.
What Not? or Ladies' Handy Book for 1860. 4s. Kist & Co.
Who's Who for 1861. 12mo. cloth. 2s. 6d. Baskin.

LITERARY INTELLIGENCE.

Judge Hiltbren is said to be engaged on a new work, containing an apology for the conduct of the Orangemen during the Canadian travels of the Prince of Wales.

Mr. Croxson, author of the "Field Book of the Revolution," is preparing for the American press a work on the war of 1812, based, in a great measure, on oral information.

It is reported that Nathaniel Hawthorne is writing a new story, the subject being our English Life.

"Fire-side Travel" is the subject of a new work from John Russell Lowell, author of "The Biglow Papers."

Mr. Booth announces "Ways and Words of Men of Letters," by the Rev. J. Pyeard; a new and cheaper edition of "Twenty Years in the Church," by a new novel by Miss Cayley, called "Chance," and "Pickering's," and such other Provincial Tales, from the Russian of Soltkov, translated by Frederick Astor.

In the January number of "Temple Bar," Mr. Sala will commence a new serial story, entitled, "The Seven Sons of Mammon."

Meers. Longman will publish immediately "Molania," a new Arabian Night Entertainment.

In addition to the six lectures "on the Chemical History of a Candle," adapted to a juvenile audience," by Professor Faraday, which are about to be delivered at the Royal Institution, Professor Owen will deliver twelve lectures on Fables; Professor Twiss, twelve lectures on Electricity; and Dr. Edward Frankland, ten lectures on Inorganic chemistry.

Mr. W. Collins, of Glasgow, will publish this month, "Palestine in 1860," a series of twenty-four photographic views, with descriptive letter-press, by the Rev. Dr. Buchanan; also, "Jerusalem in 1860," a series of twelve photographic views of Jerusalem, &c.

CHRISTMAS PRESENTS AND NEW YEAR'S GIFTS.

Designed under the Superintendence of the Society for the Diffusion of Useful Knowledge, and Corrected to the Present Time.

THE COMPLETE ATLAS

OF 225 Modern, Ancient, and Celestial Maps.

Including Plans of Celebrated Cities, and an Alphabetical Index to the Principal Places in the World, engraved from Steel Plates in the best manner, beautifully Coloured, and containing the New Discoveries and Improvements to the Present Time. New Editions (1860). 1 vol. strongly half-bound in rusia, price £9. 10s. 1. or in 2 vols. half morocco, price £10.
N.B.—A Copy of this Atlas may be inspected in the Reading-Room of the Crystal Palace, or at the Publisher's.

THE GENERAL ATLAS OF ANCIENT AND MODERN GEOGRAPHY.

171 Coloured Maps, without the Plans of Cities.

1 vol. half morocco, price £7. 7s.

THE FAMILY ATLAS.

80 Coloured Maps.

New Editions (1860), with all the Latest Improvements and New Discoveries. Half morocco, price £2s. 6s.

THE CYCLOPÆDIAN ATLAS.

39 Coloured Maps. £1. 1s.

* * * A Companion to the National, English, and other Cyclopædians.

THE ATLAS OF INDIA, CHINA, AND JAPAN.

26 Coloured Maps.

Revised by JOHN WALKER, Esq., Geographer to the Honourable East-India Company.

Half-bound, £1. 1s.

London: EDWARD STANFORD, 6, Charing-cross, S.W.

ELEGANT CHRISTMAS PRESENTS.

Pump. 3s. cloth elegant, or 5s. 6d. cloth, gilt edges, with Illustrations by JOSEPH ANSTON and HENRY ARNOLD.

SUNBEAM STORIES.

A Selection of the Tales by the Author of "A Trap to Catch a Sunbeam."

CONTENTS.

| | | |
|--|--|-------------------------------|
| A Trap to Catch a Sunbeam. Old Jolliffe, son of a Golden Weaver. | The Sequel to Old Jolliffe. The Star in the Desert. | "Only." A Merry Christmas. |
| * * The above Stories may also be had separately, price 1s. each, and are now nearly bound in Pump cloth lettered, except "Merry Christmas," price reduced to 6d. sewed. | | |
| By the same Author, | | |
| Coming Home (a Tale for the newly Married), price 3s. 6d. cloth lettered. | The Dream Chime, with Illustrations, price 3s. 6d. with beautiful fancy cover. | |
| The Cloud with the Silver Lining, price 1s. cloth lettered. | Silbert's World; or, Cross Purposes, price 3s. 6d. cloth lettered. | |
| The House on the Rock, price 1s. cloth lettered. | Amy's Kitchen (a Village Romance), lately published, 1s. cloth lettered. | |

A TRAP TO CATCH A SUNBEAM.

Thirty-fifth Edition, price 1s. cloth lettered.

"Every one of us, high and low, may derive a lesson from old David Cumber and the sparkling fairy. Every one of us may further learn how to catch a sunbeam."—Morning Post.
"A delicate, if not a fatherly, is the moral of this pleasant and interesting story."—Literary Gazette.
"Shows how energy, perseverance, industry, charity, faith, hope, and content will gild, as with a sunbeam, the darkest days, and make the lowliest situation cheerful."—Globe.

AMY'S KITCHEN: A Village Romance.

By the Author of "A Trap to Catch a Sunbeam."

Price 1s. cloth, being the lowest.

"Considered only as a pleasing tale it is amusing, but its influence is likely to extend beyond this."—Brighton Gazette.
"Like the writer's previous publications, this village novel is of a most beautiful and hopeful character."—Western Flying Post.

LITTLE SUNSHINE.

A TALE FOR VERY YOUNG CHILDREN.
With coloured Borders, Frontispiece, and 24 vignettes, square 18mo.

NEW NOVEL.

By the Author of "A Trap to Catch a Sunbeam."

MINNIE'S LOVE.

One Volume (in the Press).

London: LOCKWOOD & CO., 7, Stationers' Hall Court, E.C.

JOHN F. SHAW & CO.'S

LIST OF

NEW WORKS & NEW EDITIONS.

ASHLEY DOWN; or, Living Faith in a Living God. Memorials of the New Orphan House on Ashley Down Bristol, under the Superintendence of Mr. J. B. Miller. By J. ELIZ TAYLER, Principal, with View of Orphan Homes. Small 8vo. 2s. 6d. cloth.

New Work by the Author of "Sunlight through the Mist," "Triumphs of Steam," &c.

A NATION'S MANHOOD; or, Stories of Washington and the American War of Independence. By the Author of "Sunlight through the Mist," "Triumphs of Steam," &c. etc. Small post 8vo. with Illustrations, 6s. cloth.

New Boy's Book by R. M. BALLANTINE.

THE GOLDEN DREAM; or, Adventures in the Far West. By R. M. BALLANTINE, Author of "Hudson's Bay," "Ugava's," &c. etc. Small 8vo. with Illustrations, 6s. cloth.

SUNLIGHT THROUGH THE MIST; or, Practical Lessons drawn from the Lives of Good Men. A Story Book for Children. By the Author of "Triumphs of Steam," "The Martyr Lark," &c. New Edition, post 8vo. with Illustrations, 3s. 6d. cloth.

"We have been very much pleased with this book. It is done in a very interesting manner. We recommend the book with satisfaction."—*Scott's Magazine*, September, 1860.

A NEW DICTIONARY OF QUOTATIONS FROM THE GREEK, LATIN, AND MODERN LANGUAGES. Translated into English, and occasionally accompanied with Illustrations and Explanations, Historical, Poetical, and Anecdotal, with an extensive Index, referring to every important word. Second Thousand. Crown 8vo. 7s. 6d. cloth.

"The 'Dictionary of Quotations' is copious in contents, neat in execution, and moderate in price—three attributes which include almost all the merits to be looked for in such a compilation. This is a book, however, a merit which aspires to some of the pre-eminence. It not only follows an alphabetical arrangement of the initial word of each quotation, but has a separate index, modelled after those of the *Delphin* edition, by the aid of which the person consulting its pages may readily find the required passage, if he can remember only one or other of the Latin words. This really enhances the merit and utility of the work, and gives it a paramount claim to general circulation."—*Morning Advertiser*.

INTRODUCTION TO ENGLISH LITERATURE, FROM CHAUCER TO TENNYSON. By HENRY REED. Seventh Thousand. 2s. sewed, 3s. cloth.

"The lectures of Mr. Reed, however, may stand upon their own merits. They are the production of a refined and gentle mind. * * * The chief interest of his work consists, however, in the fact that it is an independent American view of English literature."—*Edinburgh*.

A Superior Edition of the above, fcap. 8vo., cloth, 4s. 6d.

LECTURES ON ENGLISH HISTORY AND TRAGIC POETRY, as illustrated by Shakespeare. By HENRY REED. Fifth Thousand. 2s. sewed, 3s. cloth.

LECTURES ON THE BRITISH POETS. By HENRY REED. Fourth Thousand. 2s. sewed, 4s. cloth.

"Reed's 'Poets' has been added by Mr. Shaw to his *Reveries Library*, and will, we hope, have an extensive circulation."—*Edinburgh Magazine*.
"It is not often that we meet with so much good writing, refined taste, intellectual vigour, and wholesome sentiment as are contained in these volumes."—*British Review*.

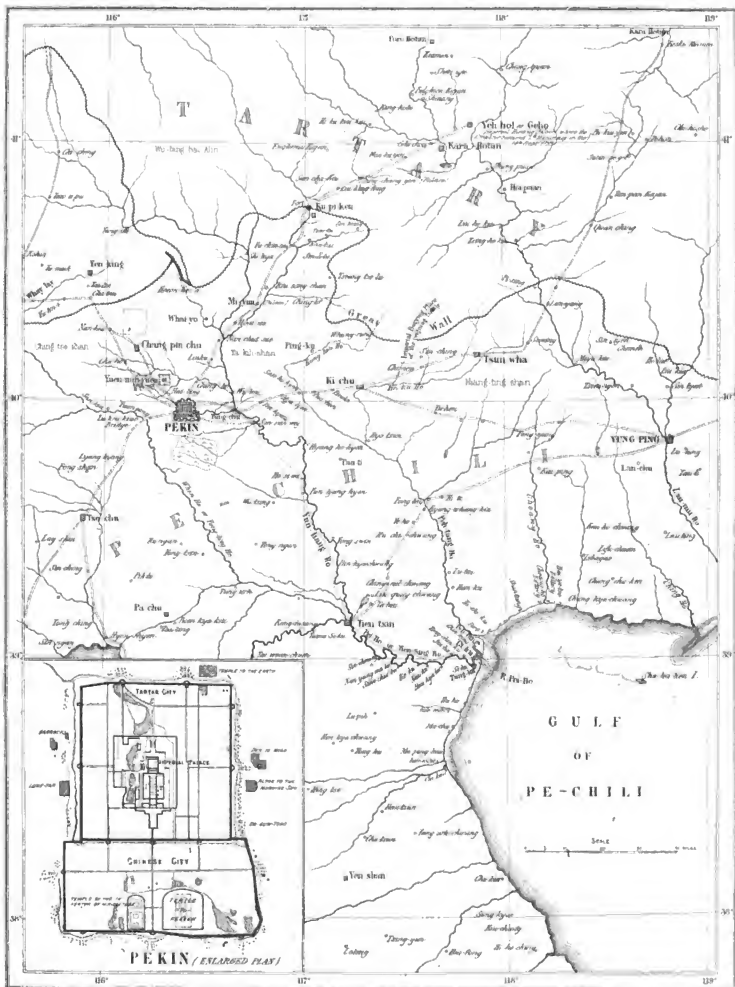

Twenty-fourth Thousand, New and Enlarged Edition (172 additional pages), 6s. cloth.

THE DICTIONARY APPENDIX, AND GUIDE TO CORRECT SPEAKING AND WRITING. Containing upwards of Seven Thousand Words not found in the Dictionary, which often prove perplexing to the best Writers, together with a Book of References for the solution of Difficulties connected with Grammar, Composition, Punctuation, &c. &c.

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 25.]

SATURDAY, DECEMBER 22, 1860.

[PRICE 3d.]

HOW TO MAKE THE CHINESE KEEP TREATIES.

THE telegram which formed the text of our article on China affairs last week, announced it to be the intention of the allies to winter in Peking. We pointed out the difficulties which opposed themselves to this scheme, and questioned the propriety of its adoption. The telegram received on Saturday, reports that the evacuation of Peking by the allied armies commenced on the 5th of November. As we anticipated, that evacuation formed the basis of negotiation. In order to get us out of Peking, the Chinese have signed anything. They did the same at Tien-tsin in 1858. The only objection to treaties signed under this system of compulsion is, that they are not considered binding by the Government from which they have been wrung. Unfortunately, we have no choice in China between treaties thus extorted and no international relations at all. Our duty is now to force the Government to keep it, just as we have forced them to make it. Chinese morality is as elastic as Indian-rubber, and will fly back if the tension is withdrawn. The sword of Damocles must be kept constantly suspended above the Imperial head, even when His Majesty is refreshing himself by "hunting according to law."

If we do not now indulge in quite so loud a crow of self-gratulation as some of our contemporaries, it is because we have never shared their anxieties or doubts, and do not now rush into the opposite extreme, and predict a halcyon period of intercourse with the Celestials. We have always believed that the same sagacity and firmness which carried Lord Elgin triumphantly through the negotiations of 1858, would carry him through those of 1860; and we as certainly predict that if he is thwarted again as he was thwarted then in the measures to be adopted for enforcing the maintenance of their obligations upon the Chinese, the treaty of Peking will be of as little value as the treaty of Tien-tsin. Had he been allowed to exchange the ratifications of that treaty himself, and keep a naval force watching the mouth of the Peiho, the disaster of the following year and the present war never would have occurred, and now his efforts will be valueless, if his policy is changed with his departure.

We have every reason to hope that both the Government at home, and the naval and military authorities with whom he is acting, have learnt wisdom. He has, at least, had the satisfaction of carrying out his original wish, of exchanging himself the ratification of his own treaty, for the treaty now concluded is, in fact, almost identical with that signed at Tien-tsin, and we have observed on this occasion that there has been every desire manifested both by the naval and military commanders-in-chief to aid and not to thwart his policy. For the energetic manner in which Sir Hope Grant supported diplomatic pressure by military tactics, he deserves the highest credit. When the operations of war and diplomacy are so intimately connected as they always must be in China, it is of the utmost importance that a good understanding should subsist between the chiefs of the two branches. To this we attribute the success of the present negotiations, to the absence of it the failure of those which were concluded by Lord Elgin during his previous mission. The difficulties which that nobleman had to encounter in 1858 were incomparably greater than those which he has overcome in 1860, and his courage in facing a second time the trials and responsibilities of a post he knew so well entitles him to a higher meed of praise than any exhibition of diplomatic skill. To risk a reputation hardly earned in other fields, and

health already injured by the same climate, to incur perils incidental to a most hazardous enterprise in an enemy's country, and the hostile criticism of a large political section at home, who will not be satisfied with success, and would have triumphed in failure, demands an amount of patriotism not often found among the public men of the present day, which they will, therefore, probably be the last to appreciate. Did we meet with it oftener, we should not have thought it necessary to allude thus fully to the services rendered by Lord Elgin to his country.

Turning once more to the state of matters in China, as indicated by the last telegram, we think it probable that Lord Elgin has waived the point of the personal interview with the Emperor, who, we are informed, was to return to Peking after the evacuation had taken place. As he has carefully caused this question to be considered one of courtesy and not of right, we do not attach any importance to this concession. So long as our troops remained in possession of Peking, it was scarcely possible to expect the Emperor to return to his capital, as he would doubtless suppose that by doing so, he would incur the risk of being taken prisoner. It will be left for Mr. Bruce to overcome the scruples of the Chinese court upon this point, and we doubt not, that in process of time the formidable question of the "Kotow" will be satisfactorily settled. Meantime it was evidently the intention of Lord Elgin to establish his brother in Peking before leaving the capital, and we may presume that, for the present, a strong guard will be left with him there as a protection. The rest of the army will be withdrawn to Tien-tsin, which it will occupy during the winter. So long as it remains there, we have little doubt of the treaty being kept; but the question the public asks itself is, are we to occupy Tien-tsin for ever? If not, when we withdraw our troops, what guarantee have we that the treaty will still be kept? We maintain that we have it now in our power to create one.

If, when the army leaves Tien-tsin, it leaves behind it a railway in full operation between Peking and Taku, we shall have no fear of Mandarin treachery. The scheme sounds startling—all new ideas are; but let us begin with laying down a line over the thirty-six miles of flat steppe country between Taku and Tien-tsin, ostensibly for the benefit of our own troops, and we shall soon make the Chinese feel the advantages we have conferred upon them, and interest them in its maintenance. The whole grain-supply of Peking passes between these two points; it amounts to upwards of 100,000 tons annually, and between 4,000 and 5,000 river junks are employed in its transport. This is only one item which might be conveyed along the line; but when it is remembered that all those inland products of China which formerly passed along the Grand Canal now come by the way of Taku, some idea may be formed of the traffic which converges on Tien-tsin. That city, containing 500,000 inhabitants, would soon appreciate the advantages of safe and speedy transport to the coast, while an extension of the line to Peking would offer no engineering difficulties. Popular pressure, an important element in China, would overcome the opposition of the Mandarins, when the masses discovered the benefit of the invention. We should enlist the people on our side, as indeed they always have been to some extent, and wage a moral war upon the proud exclusiveness and dogged obstinacy of Chinese officials, more difficult to resist than King's Dragoon Guards and Armstrong guns.

When once the advantages of a railway have been appreciated by so

intelligent a people as the Chinese, the Government will not be able to prevent their construction in other parts of China, where the roads and canals are now crowded by a restless and teeming population engaged upon a gigantic system of internal traffic. It is possible that we shall find some difficulty in getting our indemnity paid on the spot. There are many ways by which we might coerce the Government into assisting us instead of paying hard cash, while we shall never have such another opportunity of constructing a railway in China as under the auspices of an army on the spot to insure official acquiescence. The country swarms with a ragged population who would be too happy to work in gangs of thousands at twenty cash, or rather less than a penny, a day each. Many of the internal provinces of China produce excellent coal, while we have already described the facilities afforded by the natural features of the country to a work of this description.

We would earnestly press these considerations, not only upon the public, but upon the Government. Politically as well as commercially we are convinced that the scheme would answer. Our Minister at Peking would no longer feel at the mercy of Chinese mandarins if he had a railway at his door. The merchants would no longer be dependent upon Chinese traders, but could enter the country, and make their own purchases of tea and silk in the provinces which produce them. We may safely assert that, in no country in the world would railways pay better than in China. In no country would their civilizing effects be more rapidly felt. They would bind treaties, ensure peace, and demolish for ever those barriers which neither war nor diplomacy have yet been able to break down.

THE PRESIDENT'S MESSAGE.

THREATENED men live long—and so may threatened confederations. To understand how fervently Americans of every shade of political opinion are attached to theirs, let but an Englishman or a Frenchman presume to express his belief that the slavery question will cause a disruption of the Union; and it will be found that Democrats will join with Republicans and Republicans with Democrats, forgetful of their mutual recriminations and animosities, to fall upon the foolhardy stranger who has dared to utter the treason. The foreign critic in such a case finds himself in the position of the benevolent bystander, who interfered in a quarrel between a cotermerger and his wife. Besides receiving a torrent of abuse from both parties, he will be fortunate if he escape being pummelled by the man, and scratched by the woman, for not minding his own business.

The fact is, that notwithstanding the bitterness of their quarrels, the North and the South know themselves to be absolutely necessary to each other. Every American statesman and man of note, from Maine to Texas, and from New Jersey to California, looks upon the Federal Union as essential to the prosperity and dignity of all the States. Mr. Buchanan, Mr. Lincoln, Mr. Seward, Mr. Crittenden, Mr. Cam, General Scott, General Houston, Mr. Douglas, Mr. Bell, Mr. Breckenridge, and scores of others equally noteworthy, however much they may differ on the slavery question, agree in their love of the Union, and in their determination to uphold it should the worst come to the worst, and muttered rebellion ever assume the proportions of overt and successful treason.

For those reason American citizens and the world in general look to Mr. Buchanan's annual Message to Congress to discover, amid the mass of what he says, whether he means to do anything with the rebellious South. It is gratifying to find that, although he uses harsh and unjust language to the North, and rather puts the South patronizingly on the head than otherwise, he has determined not to interfere. Mr. Buchanan is right. Wisely to do nothing, to be masterly inactive, to watch and wait, to let the sulky child sulk in a corner until it thinks better of itself and of circumstances, to let it vent its petulance in angry declamation, or even in playing at soldiers, is the true policy to pursue with regard to South Carolina, or any other State that threatens secession; and would be equally the best policy of the existing President were he in his first instead of his last year of office.

Europeans, and Englishmen more particularly, are apt to imagine, in their own philanthropic dislike and horror of slavery, that the American abolitionists, who denounce it so lustily, are animated by the same feelings of humanity and religion with which men look on the matter in the Old World. But the case is not so. There are, doubtless, many men like the Hon. Charles Sumner, Mr. Wendell Phillips, and Mr. Lloyd Garrison, or like the late Theodore Parker and the unfortunate John Brown, who entertain British notions on the subject, and who consider slavery to be a moral, a social, and a religious wrong; which should be as unsperringly and vehemently denounced as murder, or robbery, or any crime forbidden in the Decalogue. But we think we do the Americans, as a nation, no injustice, when we assert that it is not so much the moral and social guilt of slavery which has embittered the antagonism of Democrats and Republicans, Slave States and Free States, as the purely political and party bearings of the question. An Englishman unaffectedly and sincerely believes

a negro to be "a man and a brother." With rare exceptions, the Americans do not practically so regard him; and less so perhaps in the North, where he is free, despised, and left to starve, than in the South, where he is enslaved, taken care of, and not unfrequently admitted to the affectionate intimacy of the family circle.

The two great parties who are continually struggling for place and power, and for all the leaves and fishes at the disposal of a very free and a very corrupt Government must have something to fight about. In constitutional countries there must be a battle cry; and as the enlightened citizens of a "model republic" cannot with any decency agree that self is their sole object, the most logical party sets up the philanthropic and moral make-believe of anti-slavery. We must remember however, that this make-believe becomes a living reality by the fact that in a country where all white men are nominally equal, the white slaveholder counts for more at the polling-booth than the white abolitionist, inasmuch as the white voters of the slave-holding States vote for a population in which five black men are reckoned equal to three white men, in the apportionment of representatives to Congress, but in which the black men do not vote at all. The political grievance, though not exactly on a par with what it would be in a close contest in an English county if the lord of many acres or the tenant farmer, in addition to his single vote as a freeholder or occupier, had a vote for every five bevers, horses, or other cattle on his estate or his farm, resembles it to some extent, as making the Southern possessor of slaves a more valuable political unit than a Northern man without slaves. We can imagine what a clamour for reform a similar state of things would create in this country, and should therefore make allowances for the hostility of the Republicans against the long dominant Democrats, even when they take the high moral and religious ground of pure anti-slavery principle.

Mr. Buchanan, in his Message, does injustice to the North, when he declares that the existing agitation and alarm in the South, have been caused "by the long-continued and intemperate interference of the Northern people with the question of slavery in the Southern States." How Mr. Buchanan can make such an asseveration, almost surpasses belief. It certainly required a very considerable amount of political "brass" to utter it. If the Southern people would have kept their peculiar institution within their own boundaries—if they had not made "political capital" out of it, in order to monopolize the government of the Federation—if they had not extended it southwards into Texas—if they had not agitated the seizure or the purchase of Cuba for the same reason—if they had not broken the Missouri compact, and extended slavery into the Far West—if they had not, by the Dred Scott decision in the Supreme Court, rendered every citizen of a non-slave-holding community, like Connecticut or Massachusetts, a participant in the guilt of slavery, by forcing his State, its government and officials, to aid in the capture and restoration of any runaway human chattel, the North would have taken very easily the existence of slavery in South Carolina or Louisiana, as easily perhaps, and with as little interference, as we in England.

But the slave-holders were aggressive. Three or four millions of Southern citizens claimed first equality with, and afterwards superiority to, eighteen or twenty millions of Western and Northern citizens—not by virtue of their intelligence, or even of their wealth, but simply by right of what they euphuistically call their "domestic institution." If the South had not been the aggressor in the dispute, and had not sought to add new territories to the Union for the sake of extending slavery, the election of a Republican President like Mr. Lincoln would have excited neither exasperation nor alarm. The Southern people, and they only, are to blame for the apparent unpleasantness of their present position. Their own consciences make cowards of them; and Mr. Buchanan, if he spoke in any other capacity than that of the head of his party, would probably be ready to own it, and to take back the imputation which he has flung against the North. But, after all, the imputation will do no harm. Both parties know the real state of the case, and the victorious North will make gracious allowance for the severity of the defeated South, until time shall have softened it into better humour.

The Constitution has not provided for the secession of any State from the Union; but if South Carolina, or any other rebellious sovereignty, should for that reason declare her independence, South Carolina and her compeers will find in due course that a law will be made to reach them. The ancient legislator of Sparta omitted to decree any punishment against parricide, because he did not consider such a crime to be possible. For a reason somewhat similar the framers of American independence may have omitted to provide for disruption. If South Carolina should commit the crime, let her be assured that her punishment will follow as assuredly as that of the Spartan parricide.

ABOLITION OF PASSPORTS IN FRANCE.

NEARLY four months ago (August 25), in discussing the question of the French Treaty, negotiated by Mr. Cobden, we took occasion to point out to that gentleman, by a means which he might add very greatly to the growth of that good understanding between the British and the French people, which he had so much at heart, and

which he had done so much to encourage. We asked, as customs duties—protective or prohibitory—between the two countries had been found so prejudicial, not only to trade, but to social intercourse and natural affinity, if impediments to free locomotion were not equally bad? We asked, as hostile custom houses were a nuisance to the merchant—why a hostile *gendarmarie* stopping the inoffensive traveller, as if he were a thief or a fraudulent bankrupt, should not be considered a nuisance still more aggravating?

On that occasion we recommended the whole subject to the earnest attention of Mr. Cobden; and urged that if he could procure from the Emperor the boon of free locomotion in France for the inhabitants of the British Isles, he would add another stone to the pyramid of his fame, complete a great work of conciliation, and entitle himself, in a higher degree than before, to the respect and gratitude of every lover of peace, and every friend of the civilization of Europe. We rejoice to find that Mr. Cobden, acting upon the well-known predictions of the Emperor, has secured this boon to the British public, and through them to the Americans and the whole travelling world. The spirit of the age and the passport system are at variance. Passports were not invented in, but are an encumbrance upon an era of railways and electric telegraphs, and are no more in accordance with civilized habits and customs than suits of chain-armour for the body, or portcullises for the dwelling place. The day will doubtless come when people, finding such antiquated documents as Foreign-office or consular Passports among the old papers and letters of their fathers and grandfathers, will have them framed and glazed as curiosities, or sent to the Manuscript Room of the British Museum to be preserved as mementoes of the semi-barbarism of past ages.

Among the many wise things which the Emperor of the French has lately been doing, this will take the highest rank; and will assuredly be so beneficial to the French trading class, as to enable all the English who have been in the habit of travelling, as well as to those who have not hitherto travelled on the Continent, on account of the delays, obstructions, vexations, and nuisances of their "ticket of leave"—the Passport. Small as the matter may appear, it has long been a cause of estrangement between the French and the English; and, as has often been proved to the world's sorrow, estrangement may beget ill-feeling, and ill-feeling hostility. No one can calculate what wars might have been prevented between the two nations, if Englishmen, for the last hundred and fifty years had been as free to travel in France as in Cumberland or the Highlands. We thank the Emperor for the boon—and trust that it may be the precursor of a better and more cordial understanding between the nations than history has yet recorded.

DETERIORATION OF SEAMEN.

THE well-known shipowner of Liverpool, Mr. T. M. Mackay, has asserted, in a letter to the *Times*, that "our merchant sailors have been deteriorating for many years." Other gentlemen, of equal authority, both in the Royal Navy and merchant service, have made the same assertion; and few persons acquainted with the mercantile marine have any doubt of its accuracy. The great number of desertions which take place both from the merchant marine and the Royal Navy is proof that the assertion is well founded. For the nation the fact is extremely unfortunate. No more organization can impart vigour to the Royal Navy, if the materials of which it is composed be sapless and rotten. Any other nation can organize. The French generally have the reputation of being superior to us in organization; and if, therefore, it be true that our seamen have deteriorated, and are deteriorating, and that the deterioration cannot be stopped, we may look forward to the cessation, at no distant day, of our naval supremacy and of the national security. The prospect is not pleasing.

The authorities say that the deterioration has been going on for many years, but that it has lately become more than usually conspicuous. We shall endeavour to explain why. Subsequent to the repeal of the Corn and Navigation Laws, our trade and our shipping increased very rapidly. So did those of the United States and other countries. "In the four years 1853-1856 (we stated on Sept. 8th), the Americans built 488,000 tons of shipping annually, while the average quantity annually built in the four previous years was only 280,000 tons. Our own shipping was also, in the same interval, rapidly but not quite equally augmented. The consequence was a great additional demand for seamen.

All other nations were, at that time, equally flourishing. The gold-discoveries excited the whole world, and thousands of seamen deserted their ships for the gold-regions of the Pacific. In every department of industry there was a demand for hands. Shipowners were obliged to take such as they could get; and as seagoing is not a favourite occupation for the bulk of the population, as the general treatment of them by the Government has added many artificial hardships to those natural to a sea life, the best part of the population avoided our ships. Ships had to compete with railways, with mines, &c., for daring hands, and did not obtain the best. As the demand for seamen extended, it embraced those of foreign vessels

entering our harbours, and the worst portions of their crews would be the first to desert. Of all men sailors belong the least to any one country, and as our demand increased beyond our own maritime population, which, in the main, supplies the United States with sailors, our sailors became, in part, manned by the riff-raff from all nations. The escaped negroes, Portuguese, Italians, Greeks, men of the lowest civilization, made up their crews; and in comparison with the hardy sailors of Shields, Bridport, Yarmouth, Shetland, &c., whom old shipowners remembered, these were very inferior. This is the explanation of the deterioration which has lately become conspicuous.

There is another ground for the unfavourable comparison. It is a general and, we believe, not an unfounded opinion, that the bulk of our labouring classes is comparatively deteriorated. If so, the deterioration will be shared by the seamen. Certainly, of our population a greater proportional number has become capitalists; and in relation to them more day-labourers possessing little or no capital, and subsisting exclusively on wages, are in a worse condition than formerly. Little farmers and little manufacturers have made way for great farmers and great manufacturers, and the community has become more distinctly divided into capitalists and day-labourers. The two classes are less blended with one another than formerly. The rich, as the Chancellor of the Exchequer once said, have become richer, and the poor poorer. The latter may be better fed, better clothed, better housed than their forefathers; nevertheless, the distinction between them and the former has become greater. In relation, then, to capitalists, whether shipowners, farmers, or manufacturers, the labouring classes have deteriorated. They may be positively improved, but relatively they have not improved so much as the classes above them. Between the house, clothing, furniture, and mode of living of the peasant and those of the tenant farmer, there is now much greater difference than there was a century ago. A similar difference is traceable between the present race of seamen and the present race of shipowners. As the little farmers have disappeared so have the little shipowner-sailors themselves; and the great shipowners who have supplied their place are so much in advance of the present race of seamen, that in their eyes the latter have deteriorated.

Mr. Mackay gives us undesignedly a striking illustration of the fact. The seamen are "lodged," he says, "in a top-gallant forecabin open in front, having the chains worked through its centre, and it is, in every sense, a habitation for no human being, who is supposed to have the smallest self-respect"—"a place worse than most dog-kennels." This is the exact counterpart of the complaint made of the lodgings of the agricultural labourer. Are they not often worse than dog-kennels, and destructive of self-respect? The lodging of seamen formerly was not so bad as now, and the same argument is employed by farmers and shipowners for the wretched accommodation of their labourers. "I," Mr. Mackay admits, "am quite as guilty as my neighbours; and the argument we all use is, that even after turning every inch of space to account, we can scarcely live in the competition which now exists with all the world." So the farmers and landlords cannot live under competition unless they turn to account every foot of their land. The competition, however, which all these capitalists find so burdensome, is, with one another, to escape as much as possible the pressure of taxation on profit, and throw it as much as possible on wages. The deterioration of the seaman and the agricultural labourer, shows that both shipowners and landowners are but too successful; and both would benefit their labourers, even if they did not benefit themselves, were they to resist extravagant expenditure, instead of exerting all their faculties, as is shown by the "dog-kennels" to which the multitude are reduced, to throw the burden of taxation on wages.

Another fact bearing on this subject is, that sea-going life, like cultivating the land, is an old, and therefore a familiar and comparatively easily-learned business. A youth begins either in the fields frightening birds, or watching cattle, or on board ship as a cabin-boy, to earn wages as soon as he can labour. No apprenticeship to either business is necessary; no premium is given. The old regulation, compelling merchant captains to take apprentices, which some people now desire to have renewed, compelled them to employ boys to do the work of men, that they in time might become expert. Now, as a rule, every sailor, farmer, or craftsman, has been brought up to his work from his infancy, and has been paid, as he has been, for the improvement of improving the condition of the multitude. Engineers, millwrights, printers, mule-spinners, &c., are much better paid than agricultural labourers and sailors. Hence, as these new arts have lately increased in number, while their domain has extended, and a great competition for skilful hands has taken place, our merchant-ships have obtained only inferior men. When we look at the workers on our railways and the *étite* of our towns, we must deny that any deterioration has taken place in our whole people. We deny, too, from our present experience, that the increase of population, per se, has the least tendency to dwarf individuals physically; but we have no doubt whatever that seamen, both in the merchant marine and in Her Majesty's navy, have deteriorated, comparatively, very much,

both physically and morally; and that if the deterioration be not stopped, our naval supremacy will be endangered.

Can the deterioration be stopped? We believe it can, by the universal panacea—justice, restore freedom. If our laws and institutions have unduly favoured the upper classes, and have contributed to stop the improvement, if not actually to deteriorate the agricultural labourer, they have for ages been unjust to the seamen, and have prevented their improvement, have kept superior men out of our ships, and are the chief causes of the deterioration which everybody is now beginning to deplore. We must not follow Mr. Lindsay's recommendation, and multiply penal enactments and police regulations. The shipowners, like all men who have done wrong, are now bewildered. Mr. Lindsay would have the shipping of mercantile seamen placed under a Government board, and have them punished for desertion as they are punished on board men of war. Mr. Mackay would have all seamen educated in the Navy, making it the nursery for the mercantile marine, instead of the mercantile marine being the nursery for it. These gentlemen, then, would maintain and extend all that remain of the consequences of the old system of impressment, which the shipowners, to their own disgrace and injury, never effectually opposed. We must not adopt their new nostrums; we must do justice to the seamen. No mere increase of pay, on which so many persons now justly insist, no petty notions of clasp and stripes, and crosses, will ever reconcile our improving population to the unnecessary and degrading restraints to which the Government, and capitalist shipowners following its bad example, have subjected all seafaring men.

HOW THE BRITISH LEGION HELPED GARIBALDI.

To the Editor of "The London Review."

SIR,—In my remarks on the subject of the conduct of the British Legion at Naples, I carefully abstained from naming any member of it, or of imputing the unfortunate results which have attended the expedition to certain individuals. My object was to warn the British public against similar manifestations of sympathy, which, whether undertaken by Englishmen in a good, or by Irishmen in a bad cause, are equally certain to lead to the same unhappy consequences. I endeavoured to show why this must always be the case. I meant to attack not so much the Legion, as the principle; and Mr. Praed's letter confirms my view. I maintain that the composition and organization of a legion of "volunteer excursionists" must invariably be such as to insure failure. Mr. Praed proves that it was so in this case, by throwing all the blame on the colonel and his military secretary. I don't pretend to say where the blame lay. Perhaps, were it worth while to enter into the personal question, I could point it out more clearly than Mr. Praed, who pretends, because he lives at Liverpool, to know more of the matter than I who have simply visited Naples. I simply assert that, in consequence of the conduct of certain of those who composed the Legion, it failed; and if there is ever another similar attempt, made, I prophesy that it will, for the same reasons, fail again. I pass over the monstrous mistatement of Mr. Praed, that "English arms turned the fortunes of the day at Melazzo." The old Occidentist would hardly admit that the thirty-seven Englishmen who happened to be in Danne's brigade saved Italy on that occasion. Does Mr. Praed know that all those heroes were disarmed and disbanded for insubordination, at the request of their officers, at San Giovanni, in Calabria; and that none of them (I do not refer to Danne and Wylliam) remained with the army throughout the campaign?

That the Italians do not entertain so high an opinion of the British Legion as Mr. Praed may be gathered from the fact that they have been glad to give them six months' pay in advance, and send them about their business. This is the last instalment drawn on Italy in favour of British sympathizers. Let this be contrasted with the treatment of the Hungarian Legion, who have now been taken into the service of Piedmont, and draw their regular pay from that Government.

If Mr. Praed wishes to serve his countrymen he had better not display his ignorance by eliciting these admissions to them, and to which I had not otherwise meant to allude. Let him confine himself to the pecuniary questions connected with the Legion; here I admit he has shown himself completely master of the situation; and by means of lengthy and ambiguous epistles in the newspapers has contrived, with singular dexterity, to keep the public in ignorance as to how the funds of the Legion have been spent. At present, therefore, Mr. Praed is at perfect liberty to make any statement he pleases with reference to these interesting details without fear of contradiction.

ONE WHO HAS RECENTLY RETURNED FROM ITALY.

POST-OFFICE "CRIMINALS."

To the Editor of "The London Review."

SIR,—No daily receiver of friendly letters but must feel, as no such sterner men as France, the poor the Penny Postage really is; but there can be no one, whose heart is in the right place, but would prefer to see the vast revenue derived from this source reduced by the few thousands necessary to pay our letter-carriers adequately. These men are now transferred in numbers to jail for taking the golden bribe to dishonesty, with which, gleaming through a too transparent envelope, their masters first tempt, and then punish them for stealing. And this is done, too, by a Christian government composed of Christian men, whom we believe daily to repeat that beautiful sentence of a sacred prayer,—"Lead us not into temptation, but deliver us from evil."

In common with many others, sir, I hope you will continue to wield your powerful pen in aid of these poor, oppressed servants of a Government that is doing its utmost to supply Newgate with criminals of their own making, from a

class of men who would be honest if they were properly paid and not "led into temptation" by those whose proper duty it is to prevent, and not to create crime.

Since I read your observations on this subject, and have learnt that one-fifth of the prisoners in that dreadful jail are derived from the Post-office alone, I have not only taken more interest than before in "our Postman," but I have taken also some pains to inquire into his condition and circumstances. Our postman is nearly seventy years of age, and his welcome hand has familiarly tapped at our door so long as I can remember—for more, I am told, than two-and-twenty years. For many years he walked upwards of twenty miles a day, receiving sixteen shillings a week as his pay; and when he became too infirm for this daily journey, his distance was reduced to sixteen miles, and, alas! his wages were reduced also, but in greater degree. He was once of four miles per day, but his weekly shillings were diminished by six, and the poor old man still trudges through his long sixteen miles per day, and receives his paltry ten shillings per week for the service.

Even on this miserable pittance he had still last week to support a sickly wife and an aged and infirm father, both of whom would have perished months ago from starvation but for the charity of "our postman's" neighbours. Death, more kind than "our postman's" master, has taken these aged burthens to himself, and their funerals have been paid for by subscription. This aged and lonely man is now left to his full ten shillings (!) for all his earthly needs and wants.

AN ADMIRER OF "THE LONDON REVIEW."

PARIS CORRESPONDENCE.

PARIS, 19th December.

If ever a man was born to be the tormentor of another, I should say Count d'Haussonville was sent upon earth expressly to fill that office for the Emperor Napoleon. Do what he will, M. d'Haussonville is always coming athwart his attempts. M. d'Haussonville is of Lorraine extraction, and parsons as are all the sons of that province; and add to which, he was married into the Broglie family, where obstinacy, quietly practiced, is an hereditary virtue; and add to all that, he is deaf as a post, does not hear the noise he makes, and "tape comme un sourd," as his intimate friends say.

One thing is quite certain, and that is that more than half His Majesty's reasons for his recent illiberal concessions bear engraven on them the name of d'Haussonville. The following is the list of what this one single individual has achieved:—In the autumn of 1859, while the Treaty of Zurich was in process of signature, he composed a letter from Count d'Haussonville to the *Comité des Français*, warning parliamentary institutions, and saying that, if France had had the Treaty of Zurich not have had the war! A few days after, it is officially announced that the French press is about to be more gently treated. "Immediately," says M. d'Haussonville, "now's our time!" and to work he sets, and a "Letter to the Senate" appears, in which he declares to that venerable body that upon it depends the salvation of the Empire and the future liberties of French citizens! The document being in anything more a pleasant tone, the Government found it had enough of the joke, and declared in the *Moniteur* that, as it was evident that freedom was fully likely to be missed, it was wise to free them from the give. The Daily News remained where it was before. But not so M. d'Haussonville. The mischievous idea struck him to have a journal of his own! This, however, the Emperor and his Ministers were resolved should not be, and M. Billault swore that, so long as he, Billault, was Billault, no paper should M. d'Haussonville have!

But the innumerable Count was not to be got rid of in this way. Like Lord Plunket's tenants he has to be "burnt out," or "palled down," and you can't settle him till you've strewn salt over the ground whereon he stood. "If I can't have a paper, say he, 'I'll have a press!' and, sure enough of press, he has had close upon half a dozen already. Why! every *proche* there has been for the last twelve months hangs directly or indirectly to this d'Haussonville procession, *opposed* to a journal that was to be "moderate," but that it was felt would be sedition, and that the Government would not hear of, on account of its "moderation"! It is not done yet,—a last discussion is going on now before some tribunal or other, in which the whole affair is called up anew before the public. But, not satisfied with this, M. d'Haussonville, towards the month of May or June last, calls together all the members of the opposition parties—Legitimist, Orléanist, and Republican,—and draws them into a coalition of pamphlets to be published monthly. The first thus published was the *Prince de Broglie's* "Algeria," the second Mr. Fétis, *Paradoxe* of "Ancien Paris"; but here, as we remember, they were brought to a sudden stop.

The Government could stand it no longer, and Frérot-Paradoxe was made the victim; but the repeated blows of the incorrigible assailant had told; in the *Liberal* set they say, "Cet ennemi de sourd a tant tapé qu'il n'est plus entendre"; and some of M. d'Haussonville's ends have been gained. Not all of them, however. His aim is liberty of the press with legal guarantees; and his mode of action is to bully the senate. He maliciously takes for his text the too famous "Letter to the Senators," written by the Emperor to those "Reverend Bishops" in 1859; and he says he finds therein that the Senate is bound to exercise an "initiative." To this the innumerable pamphleteer will hold them. He is inevitable; he is in wait for them at every corner, catches them at every turn, and, covering them with compliments, condemns them to be wise! and they shall not only be "wise," he says, but they shall be brave, and statesmanlike, and patriotic! He begins by telling them the French press must be "legally free," that they must make it so; and that they must "act"! He holds up to them the recent conduct of the State Councillors of Austria, saying: "Those men were honest advisers! try to follow their example. The Austrian Government listened to them with hopeful surprise. Their master had not insisted beforehand on the Moldavians establishing ministerial responsibility, nor did he forbid his ambassador to take any power to be put in danger of a sound thrashing by imposing constitutional government.

upon a sovereign in a mess. Their master had done nothing of all this, and yet these men ventured to speak and utter liberal thoughts, and the descendant of the Hapsburgs thought it right to march with the times. One more," says M. d'Haussoville, "go and read what was said in Vienna; then study your *Mémorial* of January 1860, and try to understand your mission." We promise you we will not fail in fulfilling ours."

This extract will suffice to prove to you that nothing can be more impatient than the tone of M. d'Haussoville's brochure. It is sold by thousands; yet just at this moment, it would be impossible for the Government, with its expressed desire for freedom, to take any rough measures against it. I think, however, I was justified in calling M. d'Haussoville Louis Napoleon's tormentor-in-chief.

In small things as well as great, His Imperial Majesty is just now made uncomfortable. His own words are taken out of his mouth, and used to his own senators, to stir them up to a frigid desire for free speech, and his own pet piece for the Boulevard is made impossible, by the money-grubbing propensities of his own seneschal riches. As you are perhaps aware, His Majesty does not yet write Pamphlets and leaders in his own newspapers, he also works actively at the formation of public opinion through the medium of the stage. His principle is that nothing is so easy to "work" as public opinion, and he accordingly "works" it with a vengeance. Last winter he gave M. Moquet the idea of the Mortara case; M. Moquet called in a clever collaborator, and "La Tireuse de Cartes" was brought out. He then said it would be well to stimulate "imperialistic sentiment," as embodied in an increase of territory. M. Moquet produced "L'Histoire du Drapeau," and showed how pleasantly the Bismarckian flag waved on the banks of the Rhine.

This year the Emperor was convinced the Eastern question must be made popular, under the form of the "sick man's" dissolution in general; and, in particular, under that of Adh-el-Kader, king of Syria. M. Moquet was all aflame with vainglorious zeal; the "Massacres of Syria" were sketched out, the Emperor reviving some by scene; camels were brought from Cairo at no matter what cost, all the French consuls in the East were busy sending costumes to Paris, every capital in Europe was ransacked for an actor who should "look" Adh-el-Kader, when it began to be evident that the "sick man" was, at all events, conscious still, for he protested against the Emir's historic royalty. Adh-el-Kader was transformed into a lesser personage, and the "Massacres of Syria" were to be given at the Cirque last month with extraordinary splendour. At the last hour, however, rose up M. Miré, and his weapon of attack was a sheet of paper, on which was written "Turkish Loan!" The "Massacres" would have injured the loan, so, for the moment, at all events, Plutus has vanquished Thorpe, and Louis Napoleon may, like Racine's Athalia,

"Dire des Juifs, to l'empire!"

The Emperor has been done by the orange-boy of Bordeaux, and all his cherished dreams of dramatic success have, for the present, vanished into thin air.

TOWN AND TABLE TALK.

(From our Fall Hall Correspondent.)

THURSDAY EVENING.

Although the news from China is dropping in day by day, and the excitement is considerably lessened by the knowledge of the great fact that France is content, yet there is enough left for the inquiry of the caterer for news, and the impatience of the gossip of the clubs, and the speculators of the Stock Exchange.

It is lamentable to be compelled at last to give up our hopes for Mr. Bowley, who is now numbered, with Mr. De Norman and Captain Anderson, amongst the victims of Chinese cruelty. The account of the Sikh soldier (published with the despatches on Saturday evening) turns out to be too true. This soldier was one of those who escaped, and he deserved Mr. Bowley as one of those tied up for three hot days and cold nights without food. The actual deaths amount to nineteen,—three Frenchmen of distinction, in addition to those three of ours, and the rest being soldiers of the respective escorts.

There is still hope that Captain Brabant may be amongst the remaining captives lodged at a distance, and not brought in. The Government is not yet in possession of the nature or amount of the retribution exacted from the Chinese, but there can be little doubt that it will be of a serious and exemplary character. The survivors on the spot are not likely to feel less acutely than we do, the perfidy and cruelty of the Chinese, to captives who were surrounded whilst *leaving a flag of truce*. The French have had some of their indemnity out in the celebration of a High Mass and *Te Deum*, amidst the ringing of bells, and lighting of candles, &c.; and they have given the proceeds of the intelligence to the French public without any delay. The English mode of retribution will, no doubt, be of a more stern and practical kind.

The French, too, have ascertained the amount of their indemnity in money, which they place at 60 millions of francs, or two million four hundred thousand pounds sterling. As this exceeds the amount appropriated to them at Tien-tsin, it is fair to assume that ours will be greater than the amount stipulated for, when the negotiations were broken off at Tien-tsin by the shuffling of the Chinese, which rendered necessary the march of the allies on Peking. Knowing the anxiety felt upon this part of the subject, I have made inquiries, and find that the Government have not received any notification of the precise amount agreed upon as our share of indemnity money under the treaty just concluded. It is supposed, however, that it will not be less than four millions sterling.

Lord Elgin has a margin allowed him in his instructions as to this substantial part of the arrangements. At Tien-tsin we were to have had 8 millions of taels, or £2,700,000—a tael being about a third of a pound. Four millions sterling will be very acceptable to Mr. Gladstone, and will assist him materially over the Income-tax difficulty, which will not always be patiently borne by the struggling men of small incomes, under £200 a year, who are hardly pressed by local and imperial taxation beyond their fair share.

People are already speculating upon the gift of the Garter, vacant by the death of Lord Aberdeen to Lord Elgin, as the blue ribbon of the Duke of Richmond was transferred to the Duke of Newcastle on his return from a successful mission.

Sir Hope Grant, too, will receive his full reward; and the civil servants who escaped will not be forgotten in the distribution of honours and rewards.

The vast gain to the country will be the opening of six more ports for Trade in the northern division of China, and the breaking-down for ever of the great sham, that Peking was not to be approached by "barbarians' feet. The fiction of the inviolability of the mighty capital is destroyed for ever, and with it much of the domineering insolence of the rulers, and the stories with which they imposed upon the credulity of soft-hearted and soft-hearted Europeans.

The abolition of passports in France is a great step. It is not only a vast good in itself, but will be the cause of much good otherwise. Although the press and the Assemblies are not so free as hitherto, still the late improvement in the Government of France are most valuable, and all in the right direction. This is the true way for the Emperor to consolidate his dynasty, and to increase the prosperity of France; and M. de Persigny is a sagacious man to find it out, and an honest man to set upon it.

It is not to be inferred from Lord John Russell's visit to Wolmar that the danger to the Duke of Bedford is imminent. He has long been accustomed to make a visit at this season. The two brothers have been always greatly attached. But in politics the duke had always an opinion of his own, and his sagacity was prized by his friends and his party, although his habits and feelings withheld him from taking a prominent part in public life. The Duke is an admirable landholder, and has improved the condition of his property and of his tenants in town and country, as much as he has increased the income of his estates. He gave £15,000 to assist the new communication from St. Martin's lane to Covent-garden; and he bequeathed his estates in Bedfordshire (of 35,000 acres) with hundreds of new farm-buildings, and thousands of cottages for the labourers.

Mr. Medie opened his new hall on Monday evening last with a grand concert, to which most of the literary and artistic celebrities of the day were invited. The gradual expansion of the great Bismarck's business has rendered an enlargement of the premises in New Oxford-street absolutely necessary; and Mr. Medie has supplied this want, by building a magnificent receptacle for books on the site of certain courts and alleys leading out of Museum-street. His new hall is large enough to contain all the literary failures and successes of the next twenty years, and the dry vaults underneath would afford decent burial for half the existing generation of authors. The architect has wisely eschewed colour in the Ionic columns that support the roof, and the only relief to the snow-white masonry, is obtained from the variegated bindings of the books.

The company collected by Mr. Medie to view this splendid addition to his ordinary shop, represented all degrees in literature and art, and every shade of the opinions of the day. Journalists rushed in from London, writing and editing; poets and painters took charge of actresses or "strange-minded women"; and circled round, or divided between blocks of intellectual characters, whose conversation was strictly professional. The appearance of eminent publishers, in agreeable conference with eminent authors, gave a tone of business to the place, and made it look like one of those exchanges where "merchants meet to congregate." Several literary visitors were doubtless gratified by seeing a long shelf devoted to one of their books, but every step led to the light of the happiness, by pointing out how many were "ancient," unused volumes. The daily and weekly press, with the magazines and reviews, were represented by their leading members, and when one literary foe met another on this neutral ground, his feelings were softened by the distant sound of music. In a few days the hall will be covered with boxes and packing-cases, and will present no other aspect than that of a large and elegant book warehouse.

The canal proprietors of England are waking up at last, and are trying to obtain the aid of steam to improve their dividends and their prospects. The forty millions sterling invested in this class of property has sunk enormously in value during the last twenty years, notwithstanding the fact that canal goods traffic has increased by about 25,000 tons per annum since the opening of railways. The problem has been to find an engine that will occupy a very small space, increase the speed of the "fly-bush" continually gliding up and right over one or five thousand miles of canal, and yet not produce sufficient "wash," or lateral wave, to destroy the valuable banks of these narrow channels. This problem has, at last, been solved by Mr. Hirsch, an eminent mechanic, acting for the Grand Junction Canal Company; and while the speed of the ordinary canal boats may be doubled under the neat and simple engines of this inventor, the working expenses will probably be reduced at least forty per cent. The canals already built the railways by about five per cent. in the carriage of heavy goods requiring nothing but slow transit, and this improvement will give them an ample margin for further competition. The Grand Junction Canal Company inaugurated the introduction of steam on canals this week, and in a few years the whole features of this enormous inland traffic will be changed. "Bargees" will be turned into stokers and engineers; and men like "Captain Randle," who figure in "Old Journeys," will become, like stage coachmen, an extinct race.

The young folks from school, and the holiday-makers in general, will have a wide range of choice in their visits to the theatre this Christmas. Pantomime and extravaganza are already announced at all the West-end theatres. The old familiar names of the nursery and fairy tales already figure extensively on the bills.

Even Her Majesty's Theatre consents to pantomime on Boxing Night. After a new English opera, called "Queen Topaze," we are to have the grand pantomime of "Tom Thumb." Covent Garden takes forward the attractive title of "Blue Beard," and Drury Lane relies upon "Peter Wilkins," or, the Flying Dutchman, to exhibit the pantomime strength of the company; and the pictorial talent of Mr. W. Beverley. The opening is, as usual, by Mr. E. L. Blanchard, who has been the successful inventor of several successive extravaganzas of that

class. At the Haymarket, Mr. Buckstone promises us one of his own best productions, after the manner of "The Sleeping Beauty," "Little Bo-Peep," &c. It is to be called "Queen Ladybird and her Children," or, Hackney, and a House on Fire," which will introduce the dancing and agility of the Leckerp, and the extravagance best rendered at this little theatre.

At the Adelphi we have another edition of "Blue Beard," of a different hue from that of Covent Garden, and with all the appliances of the Adelphi stage. The Princess's figure the friend of young and old children. Robinson Crusoe is called up to assume us once again. At the Lyceum, Madame Celeste has selected the striking title of "Christabelle," or "The Rose without a Thorn," which is a flower, we fear, seldom found out of the inhospitable scenes of Mr. Calcut, and which Madame Celeste will no doubt "put upon the stage with her usual taste. The Strand relies upon Choderlos and the charming little slipper, which Miss Fremantle promises to fit upon her pretty little foot. We are to have a true Robson burlesque at the Olympic; and I believe that Mr. Wigan will give us a Planché Romance at the St. James's, although it is not yet announced.

THE GOUTY PHILOSOPHER.—No. XXIV.

MR. WAGSTAFFE ALLUWS A FRIEND TO SAY A GOOD WORD FOR TOBACCO.

A VERY particular friend, of whom I desire to speak with the utmost respect, and more than the utmost, if such a stretch of word or thought be possible, is the brother of the Earl of Throgmorton, the Honourable John Trench. The respect is due to him, not because he calls himself or is called "The Honourable," for we are all honourable men; not because he is rich, and witty, and wise, and generous, but because (the confusion is large enough, but truth is truth, and ought to prevail much oftener than it does), he gives better dinners, and better wine, and keeps his company in better humour while dinner lasts, than any man in Europe. England only possesses him for brief seasons; for a genius such as his requires France, Germany, and Italy, as well as England, for its full development and activity. But we who honour him, can follow to London or to Paris either, if need be, to get into the Excelsior or the Excelsiastimus of human life, and dine with Trench. His dinner parties never exceed ten. He says it is folly, if not worse, to have a greater number at table; and for these favoured ten he provides a repast, without extravagance, which satisfies the eye, the palate, the nose, the ear, and the touch, and which ministers alike to physical and to intellectual gratification; which renders eating one of the fine arts, and presses into the service of the appetite, science and literature, the pleasures of sense and the pleasures of soul; and in the indulgence of which the whole nature is not only strengthened, but purified and exalted. And admirable as is his cookery, his choice of wine transcends it. No fiery port, or execrable sherry, or availing champagne—in fact, no Port, and no Sherry, is ever to be found at Mr. Trench's table; but Bordeaux, of the choicest vintage; Burgundy, from Beaune, to go down to Beaune, tenderly handled as becomes its delicacy; Rhensish, both red and white; Johannisberg, and Asmanhausen, such as Apicius never dreamed of; Vaucluse, potent and grave, from Hungary; with Catawba and Isabella from Cincinnati, that glitter and sparkle, and "cheer but not inebriate"—these, the very finest of their kind, are the drinks that are taken at, and not after dinner, when Mr. Trench receives his friends.

There are fools who have been invited once, and only once, to these symposia, who have betrayed their preference of common Port to his choice Burgundy, and of common beef, roast or boiled, to his scientific *extremes*; but Mr. Trench knows such "common fellows," as he calls them, by their look, attitude, and gesture, at table. They have no necessity to speak. He sees at a glance that they are not of the Sèvres or Dresden ware, of which he is made, but of common delft, of the willow pattern. They never have a second chance of showing their ignorance at his table; and we who are of the inner circle, and know the mysteries, rejoice at their exclusion. The ideas of Mr. Trench upon English cookery have never yet been given to the world; but perhaps they will be, through me. Let the reader look for them to study them, if he would know the idiosyncrasies of a man who was as much born to give dinners as Napoleon I. to gain victories, or an Old Bailey barrister to bully a witness—who has the means as well as the knowledge involved in the vocation to which Providence and a good fortune have called him, and who has managed to press all the senses into the service of the palate, and to dignify not only the palate, but every other sense in the process. Would that man had ten senses instead of five! And for that unutter why not a thousand! Who shall limit the illimitable! And may not the beatitudes of superior beings, and of Heaven, consist in an increase of the number of those senses, doors, by which the limitless soul communicates with nature? We have eyes now that can see a stone wall; why should we not have eyes hereafter that can see through one!

Dining with Mr. Trench last week, he took me to task for my hatred of tobacco. I defended my opinions, and he defended his. The result was, after a few preliminary skirmishes, that he did battle with me in the following fashion, for his favourite indulgence:—

"It is not curious," he said, "that the more civilization has increased in the world, the more tobacco has been consumed! The growth of the one keeps pace with the love of the other, and vice versa. The discoveries of science are made by men who blow clouds of tobacco-smoke. When Homer lived there was no smoking, but there were also no steam-engines. When Plato taught there were no cigars, but at the same time there were no railroads. Let us inquire,

not only what are the fascinations of tobacco, but its effect upon the mind and body of those who use it. By the general consent of all who smoke, it is conceded that tobacco has a soothing influence upon the brain and nerves. It calms irritability. No man can be angry with a pipe or cigar in his mouth. It disposes the mind to peace, charity, and good-will. The Indian phrase, 'the calumet of peace,' has passed into our English idiom. The smoke of gunpowder is warlike; that of tobacco is *reconciler of negotiation, truce, peace, and reconciliation*. If a man will do an ill-natured thing he must put down his pipe to do it. Then again, the pipe or cigar is a companion. He who smokes is not alone, even in the extreme of solitude. He has a friend in his mouth, who administers consolation to him for the hard rubs he may have received from the world. Smoke disposes the mind to meditation and self-communion. To know one's self has always been held the greatest proof of wisdom; and how much self-knowledge is acquired in those long-drawn whiffs of the solitary smoker, when, heedless of the world without, his thoughts are entirely concentrated upon that wonderful microcosm—himself! What is it that cheers the hard life of a sailor? Tobacco. What is it that enables the soldier to march over bog and brake, to ford rivers, to penetrate through wildernesses of snow, to endure the ice of the frigid and the scorching heat of the torrid zone? Tobacco. What is it that reconciles the man to the world who has a large bill due to-morrow and not a stiver to meet it? Tobacco. Did any man ever meditate suicide with a pipe or cigar in his mouth? Never! and no man ever will. The influence of the plant is so genial, that when any thought of the kind shoots across the brain of the dejected and the forlorn, they have but to light a pipe or cigar, and be reconciled to their miserable existence. All tinea of the rope or the razor, of prismatic acid or a leap from Waterloo Bridge, vanish before the fumes of a choice Havannah. The troubles of the mind yield to the delicious influence of the blessed weed. And great as these benefits and fascinations, all derivable from tobacco, I hold that there are many others which should make men in a high state of civilization grateful to Providence for so splendid and beneficent a gift.

"Worn with the undue pressure upon the brain consequent upon the fierce competition of the present day—debilitated as well as depressed—overwrought in the struggle to sustain, or to maintain a respectable position in the world, the man of shattered nerves has a friend that lies gentle as sleep, soft as down, luxurious as sunshine, upon his senses. That friend is tobacco. Even when the nerves are not shattered, when the man is sound of mind and limb, and unmanly by the cares and sorrows of the world; when the mind is, as it were, fallow, and waiting to bring forth a crop of ideas, the balmy influence of tobacco predisposes it to fructification. None but those who have smoked know the heavenly luxury of a cigar after dinner. It is then that, reclining in an easy chair, or stretched at full length upon a sofa, we are aware of certain half-formed thoughts and fancies, which go flitting across the camera-lucida of the inner life—it is then that the soul itself seems to float lazily, peacefully, beautifully, and beatifically, like a light cloud upon the evening sky, looking down complacently upon the clay above which it soars, yet from which it springs, and to which it belongs. Supposing the cynic to be reclining on a sofa at his own fire-side, under the light of his own resplendent chandelier, comfortable as all cynics are, are there not countless illustrations of the vanity of the world to be afforded him by the clouds of this blue smoke which he discharges from his mouth and nostrils? The love of woman? Alas! in what is it better or more substantial than the vapours of his Havannah? Possession of gold? Alas! and doubly and trebly alas! what signifies it? What is it worth after it has been acquired? Will it repay the grey and aching head, or the sear'd and aching heart? Will it soothe the troubled conscience? Will it bring healing to the sick? No; but tobacco will; and therefore are the fumes of pipe or cigar, in producing this effect, more valuable by far than the possession of treasure. Is fame more worthy? Not a whit. It is but a breath, and is even more unsubstantial than the whiff of a meerschaum. Oftentimes, indeed, it is far more evanescent.

"Equally apt for its illustration of another phase of human life and character, is the smoke which the smoker exhales. Should he be an epicurean, easy and good-natured, at ease with himself and with all the world, determined to extract from the world, while he lives in it, all the harmless enjoyment that he can, on every side of no man, but simply the enemy of care, vexation, annoyance, and all the rude and strong passions that might disturb the careless serenity of his soul, the light fumes of his hook or his Havannah afford him abundant opportunities to moralize upon earthly vanity. What, for instance, is grief, that it should weigh upon his immortal mind? 'Tis nothing—it is but as a puff of smoke and it is gone. What is anger that it should lodge in his breast, and what is there in the world worth being angry about? Nothing!—unless the thin fleecy cloud that hovers above his face as he puffs his cigar, be worthy of entering into the large list of respectable entities. Spite, jealousy, malice, envy—all the other little mean paltry passions—are infinitely less than smoke in the estimation of such a man as this is. As for the big grandiose tragic passions, they are no better than the little ones. They are like the smoke out of an evil and malevolent furnace, not to be compared to the smoke of his pipe, which is altogether benevolent and beneficent. But, after all, the principal virtue of tobacco is that it is friendly of itself, and is the cause of friendliness in others. If two men have ever been in the habit of smoking together, there is peace between them. To smoke with a man in modern times, is tanta-

mount to the practice among the ancients of breaking bread with him. It is a sign of hospitality and good will. It may not always make people friends, but it prevents them from becoming enemies while the smoking lasts. We are told that many a friendship which adorned a life, and only concluded with its, arose, in the early days of the world, over a crust of bread. I have no doubt that many a friendship, equally pure, disinterested, and constant, owes its origin, in the present age, to a proffered crumb, to the demand for and concession of a light, or to the graceful and common courtesy of a pinch out of a neighbour's snuff-box."

In reply to this rhapsody, to which I listened, I hope, with all the patience becoming the guest of such an Amphitryon—and of which I did not previously believe myself capable under the circumstances of such a calm premeditated outrage on one of my most cherished convictions—I simply asked Mr. Trench if he had ever heard "The Lady's Vow"? Of course I knew he had not; and on his replying in the negative, I repeated it to him thus,—

"There is the word of death:
It breaks the truth,—it tears the breath.
By all that's good,—by all that's fair,
This is the oath we women swear.
No more to ours his lips shall press
Who loves the purity, more or less.
Let those who stuff it sigh and groan
For ever lordless and alone.
Let those who draw it breathe with ease,
With cleaner jaws and bared to these,
And those who smother it live their lives
Without the joy of wrens and wives.
Wise men are wiser than great men,
Does with smother one and all!"

"Such doggerel proves nothing," said Mr. Trench. "But doggerel or no doggerel," said I, "it may express an honest wish—and quite agreeing with the ladies, I beg, in their names, to close the discussion."

MEN OF MARK.—No. XII.

THE EARL OF ABERDEEN, K.G., K.T., ETC.

THE ministerial career and public services of the late Earl of Aberdeen have been copiously described by our contemporaries, and it would be wearisome and unprofitable to travel over the same ground. A few personal characteristics which have not appeared elsewhere may, however, be acceptable, as enabling the public to fill up the warm hues of flesh and blood the outline, drawn by our brother journalists, of the statesman and the senator.

If the visitor to the House of Lords was asked on some night of great debate to look round and select the most judicious-looking peer, he would have stopped none without hesitation at the Earl of Aberdeen. An indefinable something in his expression and features pointed him out as pre-eminently a judicious statesman. There would be many peers whose faces and heads indicated intelligence, sharpness, cleverness, while the expression of others might be said to be astute, thoughtful, and reflective. But there was a mildness, a moderation, an amiability, an evenness of temper beaming in Lord Aberdeen's features, which could not be found in the same proportions in any other physiognomy in either House of Parliament. This evenly-balanced and highly-trained judgment Lavater would have traced in largest measure in the lines about the mouth, which was large, and manifested great firmness of purpose as well as evenness of disposition. The venerable peer's movements were slow and measured, his gestures sparing and simple. Every trait indicated a statesman not easily thrown off his balance, not rash in deciding, intelligent without impulsiveness, and firm without obstinacy.

Up to 1811 the Earl of Aberdeen was a party politician, and nothing more. When Sir Robert Peel, being restored to office in that year, showed signs of an intention to emancipate himself from the trammels of party, his Secretary of State for Foreign Affairs shared in his wider views, and began also to live for posterity. Lord Palmerston's foreign policy had often been haughty and irritating to foreign Powers. It was not without that, the interference of the English Cabinet in the internal affairs of foreign States compromised ourselves without adding the objects of our sympathy. Lord Aberdeen was, on the contrary, peculiarly qualified by taste and temper to become a moderator and peace-maker. He took part in adjusting the dispute between the Sublime Porte and the Shah of Persia, which menaced the tranquillity of the East. He successfully endeavoured, in concert with the Government of Louis Philippe, to put an end to civil war and intestine convulsion on the banks of the River Plata. When the Oregon question threatened a war between England and the United States, Lord Aberdeen never doubted his ability to bring the dispute to an amicable settlement. He was charged with conceding too much—with showing his cards to his adversary.

He was told he had permitted Lord Ashburton to shake all his equivalents out of a bag upon the floor, instead of exacting the *quid pro quo* from the United States, and driving a hard diplomatic bargain. Lord Palmerston exerted this vein with great dexterity and success. Sir Robert Peel, however, exerted all his pliancy in defence of his Foreign Secretary, and the moneyed and commercial interests were not sorry to see a dispute about a comparatively worthless tract of territory settled out of hand. Like Rembrandt, Vandyke, Hogarth, and other masters of the art of painting, who have not thought it undignified to paint their own portraits, the Earl of Aberdeen on this occasion drew, with a modest and unobtrusive hand, the characteristics by which it was his ambition to be known to succeeding times. After saying that "believing, as he did, that war was the greatest calamity that could befall a nation, and also, generally, the greatest crime that a nation could commit, their lordships might rely that every effort consistent with honour would be made to avert it," the noble earl added, "My lords, if I might without presumption speak on a subject which is perhaps personal to myself, I would say your lordships may believe that the conduct of these great transactions would be *forbearing, conciliating, moderate, and just.*"

Here we have the portrait of the "Athenian Aberdeen," painted by himself; nor can it be said that in the judgment of his contemporaries the likeness is factured.

One of Lord John's best hits in debate, was aimed at Sir R. Peel's Foreign Secretary. "Shall my noble friend (Palmerston) be the Minister—ah!—of Austria—he is not the Minister—ah!—of Russia—he is the Minister—ah!—of ENGLAND." The Whigs and Radicals shouted themselves hoarse. The "cheer" lasted five minutes. But a Nemesis waited upon epigrams, and we are sure to wish unsaid all the *bon mots* we make at other people's expense. Emerson, in his "Conduct of Life," says, the politician must "hold his hatreds at arm's length, and not remember spite. He has neither friends nor enemies, but valiant men only as channels of power." There came a time when he who was, by implication, the Minister of Austria and of Russia, but not of England, was the head of a Cabinet in which his incompetency rivaled his wisdom: the Foreign Secretary. Lord Aberdeen had been not a whit more complimentary upon the foreign policy of Lord John Russell's Government, and especially upon Lord Palmerston's conduct in the affair of Don Pacifico. The proceedings in the Greek waters, sanctioned by the Whig Government, had, he said, "excited one universal cry of indignation throughout Europe." "When I look," said the noble earl, "at our relations with Europe generally, I find them in an unprecedented condition. There is, however, my lords, this consolation, that the nations of the continent fortissimely separate the conduct of her Majesty's Government from the feelings of the English people."

The death of Sir R. Peel left the Earl of Aberdeen the recognized leader of the Peelite party, and on the defeat of Lord Derby's Government in December, 1852, he was sent for by her Majesty, and commissioned to form a Government. The result was the Coalition Cabinet. Strong in debate, and having the confidence of the House of Commons, Lord Aberdeen's administration was marked by many legislative and administrative improvements. But the excessive devotion of the Premier to peace principles, and the abhorrence of war which characterised his Oregon speeches and negotiations, unfitted him for dealing with the haughty, arbitrary, and self-willed Czar. This was a nettle that required bolder handling. The nation "drifted into war." As the leader of a party, the Premier had been obliged to give assent in the Cabinet and high ministerial office to his friends. The men who had the highest claims upon him were the Duke of Newcastle and Sidney Herbert—very good "fair-weather" politicians. An ill fortune, and perhaps an ambition that overleapt itself, led the one, however, to claim the seals of the Colonies, and the other the post of Secretary at War, in which capacities they jointly exercised functions of military administration, since blended in the Secretary of State for War. Our military system broke down. Mr. Roebuck arraigned the incompetent Ministers at the bar of public opinion, and Lord John Russell, unable to defend his two colleagues, resigned. The Earl of Aberdeen knew that he must stand or fall by the pebbles party in the Cabinet, and when Mr. Roebuck carried the Select Committee, he gave in his resignation, and virtually retired into private life. He has not unwisely since taken his seat upon the cross-benches of the Upper House, but has seldom addressed their lordships.

Lord Aberdeen made no pretensions to rhetoric, but his speeches were marked by brevity, clearness, simplicity and propriety. The desire to fill a space in the public eye, to be talked of in the newspapers, which inspires so many orators in both Houses, never brought him to his feet. No Premier since the Reform Bill has spoken so little. His speeches were models of terseness. Never did he claim their lordships' attention, even when First Lord of the Treasury, except an absolute necessity drove him to explain or defend the measures or views of his administration. If all statements were equally modest, equally reticent, and equally considerate, there would be time for needful legislation, and every Session would not leave the bulk of its business as a remnant. His speeches were always marked by good sense—by that quality of judiciousness, in fact, which distinguished him above his contemporaries. His Government will be favourably known to posterity by the accession duties on real property, by the amelioration of the exclusive system of admission to the Universities; by a system of examination for employment in the Civil Service, involving a sacrifice of Parliamentary patronage and influence which was in advance of the age; by several measures for the extension of free-trade; and by the inauguration of a new Government for India.

Finally, the Earl of Aberdeen has left the impress of his moderation upon the foreign policy of this country. Peace, non-interference, conciliation, justice—the principles, in fact, of Lord Aberdeen's foreign policy are now the acknowledged rule of action of a British Government. Recent events in Italy have shown the wisdom of the new course of policy. "Judicious bottle-holders" may as always be able to restrain their sympathies, and may be tempted now and then to "egg on" their intelligent friends. But it will not be denied that since Lord Palmerston came under the personal influence of the deceased statesman, his foreign policy has become assimilated in a remarkable degree to that of his former rival and political antagonist. Mildness, dignified forbearance, a sincere respect for the feelings and independence of other powers, an absence of Master in our dealings with weaker states, a calm and conciliatory tone befitting our strength, and an indisposition to interfere in the internal affairs of other countries, are principles of foreign policy eminently favorable to peace, prosperity, and civilization. Nor has the Minister lived in vain who has been seen, year after year, these distinctive merits of his foreign administration adopted by his political opponents whether Conservative or Liberal, with the full approbation of the British people.

PITHICRANS IN CHINA.—It is wise to learn from our enemies, says the proverb; and at any rate it can do no harm to learn how the Chinese pay their doctors. In the celestial empire the rule is "No cure, no pay;" but as the court physicians are paid by salaries, the arrangement is to pay so long as the royal health continues, and cut off during indisposition till quite convalescent.

ANIMAL-IMPROVERS.

SIMPLE as the economy of the great farming-stock world may seem to those who merely care to look at Herring's pretty canvas pasturals, and order the weekly ribbon or leg of pork, it is a truth made up of countless weighty thoughts and interests, and plenty of sharp practice to boot. It has a Debetit of its own, which traces its "Canterbury Pilgrims" (of which *Punch* sang in July), eighty years back, among the "yellow-rede, and whites," with Huteback and Belvidere as its Cecil and Goldolphin, and the "white heifer which travelled," as a peevish in her own right. These pastures

— Where Greta trips with twinkling feet,
To the Cuckoo and the Two.

are still the same Goshen of cream and beef; but the ancient flock-master has to look in vain for the Teeswaters of his youth. The history of Short-horns, especially, has been a strange shifting drama, since their lovings were first heard in the land. Very few who ushered in the new era at the Ketton sale, and saw the hammer fall for a thousand guineas for the first "Basset," remain to tell the tale. An engraving of 1815 that day the sure effect, in creating boundless jealousy. Alphy pamphlets grew rife; and then it needed all the philosophy that Lord Althorp, the Rev. H. Berry, Mr. Whitaker, and a few others, could muster, to keep up heart at all, during many a weary year of agricultural distress. Americans gradually sought the valley of the Wharfe, and carried wondrous tales across the Atlantic of the cows of the Whitaker herd; and "a quiet afternoon at Killarney" began to suggest pleasant memories of "Young Albion," with his wondrous ribs, "Leonard" of the loin, and "Necklace" and "Bracelet," the most invincible of twins. "Warley" then rose into sight, with its "Lodians," its "Hops," its "Gems," and its "Blossoms," four lines of royal winners, without need of a defeat till Colonel Townley entered the lists, and showed them pretty decisively that a herd, to be successful in the long run, must not be a close borough in blood. The history of the Townley herd is the most unrequered and brilliant on record. Upwards of six thousand pounds' worth of stock were sold out of it in one lot, and it was no diminution, as "Beauty's" Buttery," who sterner every Phœnix heart at Southfield last December, might have made a model for Philias or Chantrey.

It is only of late years that substantial justice has been done to the clear searching brain, and marvellous philosophy of Mr. Bates. Sir Fowell Buxton thought there was nothing worth living for but negroes and partridges; Mr. Justice Buller made the same observation in favour of *Nin Prins* and wheat; Mr. Pugin bracketed architecture and boating as his chief joys; and missionaries and Short-horns were all Mr. Bates's desire. His beasts would come to him and lick his hand, while he talked to them, hour after hour, in his Kirkcubrighten meadows, and he would take his walks, without leaving his darlings, when he was too weak to walk, and hardly quitted it by day till the death-throes were on him. Such enthusiasm could scarcely fail of producing some great results. Breeders still speak of his "Fourth Duke of Northumberland," as the grandest animal that ever filled the eye; and the "Duchess" tribe, which he fostered in family, brought up the late Lord of Dufferin's male sire to £150 odd. Like many originalists, he was too bigoted, and his breed has thriven far better by dispersion into the Duke of Devonshire's, Mr. Bolden's, and Captain Gwynne's hands. Already has the former made a thousand guineas, twice over, from the Americans, for bulls; while the latter has taken just the sum for any of his own cow or heifer, and then with a guarantee that she was to go abroad forthwith.

The wild cattle of Chillingham still roam their park, with a coat as white, and an eye as tawny as ever; but while the Herefords and Devons are very stationary, in one locality in quality and the other in size, man has gradually moulded the Short-horn at his will. Fancy colours are very tenacious of yielding; and to this day the little white beauty spot above the muzzle, and the marks on the thigh and flank invariably come out in the red Duchesses. From some fancy or other, roan became gradually to be considered as orthodox for a Short-horn, as bay for a horse; and by a judicious use of red and white parents, it is almost to the dignity of a primitive colour. There is no doubt that certain great cattle-breeders, the Maynard family for instance, had quite as good bullocks half a century ago, as we can breed now; but it is through the untold thought and efforts of different improvers, that the general standard of excellence has become so much higher. Mr. Bates laboured in his day to combine the best of the fine mellow handling and milking properties. Sir Charles Knightly declared war against open shoulders, till the neatness of the Fawley fore-quarter became a proverb. The Booths prided themselves on a fine breast, deep flesh, and a pure level for the hindquarters. Colonel Townley has proved that, with an Admirable Creation of a herdsmaster, it is possible to force cows and heifers to the highest pitch of size, and yet dot your pastures abundantly with calves as well; and breeders and show judges universally set their faces against "fool's fat" and patchiness, and love to see their candidates fed as level as a horse.

To grow meat in the right place, is the greatest achievement. It is not in the forequarter, but in the ninetieth regions, that a judge cares to see it laid on, and therefore a breast so big that it takes a couple of hands to handle, counts for very little with him. He takes care to breed so as to remove that scapiness on the backstreak region which is so fatal to a juicy cut. The thin-skinned tenderness of the back has to be set right; a fine spring of the ribs has to be acquired for the sirloin's sake; and thick "Marmaduke crops" have to be substituted for a mere razor-edged hillock at the union of the shoulders. As with a horse so with a Short-horn—the soundest constitution is to be found in a long well-ribbed-up carcass on a short leg; and when that leg is as light in the bone as possible, the back ribs closely knit together, the quarter and twist well let down, the shoulders neatly laid back, the flank deep, the neck-vein close, and a placid eye in a small head, the problem of the best beef-machine is pretty nearly solved.

Human ingenuity, except perhaps in the strictly agricultural districts, where they were tried to breed in more light and active, has done very little for the horse. The thorough-bred of 1800 is pretty much what it was when George Guelph sported his fat and foolish person at Newmarket. We have nothing stouter than Sir Peter Tazewell, and nothing handier than Whisker; but, with the peace of Lord Redefield be it spoken, Teddington or Alice Hawthorne could doubtless stir and race with the best of them, in spite of

our light-weight and short-course propensities. At all sales the mare and foalings with the most bone and size invariably command the highest prices, and, to use the words of the *Sporting Magazine*, in reference to his lordships' means of locomotion, in railways, omnibuses, and cabs, have progressed so wonderfully that therefore the tables of the last thirty years have been born with worse legs and feet? Still, as we have seen, to come to our blood and cart horses show no decline, there is a decided retrogression as far as coach and riding horses are concerned. The combined carelessness and wantonness of the farmers is the source of this mischief. They do not care what they breed from as long as they see something in the shape of a foal, and they patronize such rips of the blood as they can get, and their services for free-and-easy or light shillings, then the owners of good ones, who do not care to conform to such a wretched tariff, sell the foreigners in sheer self-defence. As with cattle so with horses,—length on a short stout leg is what is always wanted, but is rarely ever got.

On sheep-structure the improvers have practised with remarkable success, as the Shropshire Downs can abundantly testify. It is not for us to set the moot question, whether Southdown mutton, washed down with sherry, or Leicester with port, is least productive of gout; but when we look at the "Webbs" and the "Sandays," in their long fleecy plateaus in the Royal showyard, or the Cotswolds, which Garne and Hewer fore, we are almost tempted to say with a modern shepherd, when he examines the stunted representatives of a flock of the old-fashioned uncrossed Bakewells, "Boun't there a touch of the goat about them?" Under the influence of modern thought, the back has been expanded till it would seem that there must be a rood of mutton-chops beneath. The long lean worthless scrap has been got rid of, and the better first-class sheep, with knees well up to the shoulders, that a plumb line would almost rest level from the crown to the rump. By cure in getting the twist well down, three or four pounds have been added to the leg of mutton; and to assist its development the hocks are brought so completely under the sheep that it appears to be supported on two pairs of fore-legs. Wool, as has been said, is the crown jewel of the shepherd's standard. A good flockmaster is as anxious that such a propensity should not become hereditary, through her lambs, as the Saxony shepherd is to collect his golden-fleeced merinos into a barn when he sees a threatening cloud. Lincolnshire rams are the great corrective when the fibres become too short, and to turn the most devoted disciples of Bakewell have turned periodically, not only for wool but for that size which all farmers covet. What they can attain to, in both respects, may be judged from the fact, that one of Mr. Dudding's rams this year clipped to 22 lbs., and the shepherd has been so accustomed to 22 lbs. fleeces that he has never been able to ascertain which sheep it came from.

Pig-improvers have not been laggards in the farm-yard march. They have learnt that cleanliness has much to do with growth, but the ingenious doctrine that pigs should be on spar floors, so that locomotion may become impossible, has never been engrained into the breed. Every year the interest of the farmer in taking care of his pigs has increased, and the smaller one "make up to nothing when they are fed." Hence to get a cross between the two, with hams as big as possible, and "bacon on to the very top of their heads," and gradually wending its way over the face, till all the language of the eye is fed out of it, and the animal is merely left as a feeding or breeding tub, is the very essence of pork-improvement.

The guinea-wives have not, been behind their husbands in their own peculiar sphere. Taking the Birmingham show as the test, Dorsetings can be reared 2½ lbs. heavier than they were before medals and winning rosettes in prospective exercised such a thrilling influence. Once a year a true farmer would pull up to his pig, to gaze at a 15 lb. gross, whereas now he may be seen in one pen averaging, as nearly as possible, 25 lbs. apiece. Even the Rev. J. Robinson's two-stone gander had to resign its apple-sauce supremacy when a grey one 1½ lbs. heavier visited Bingley Hall. Aylesbury ducks have also been improved into nearly double their old 4 lbs. standard; and turkey fanciers have learned to regard 16 lbs. as the nothing out of the way, and to produce 22-pounders for the prize at Christmas-tide. With such figures and results before us, who can say that genius is confined to the town, or that enthusiasm has waxed cold in the homestead and the grange?

WILD SPORT IN GERMANY.

[From our Travelling Correspondent.]

It is pleasant, when the gaiety and dissipation of continental watering-places lead us, to retire to a village, to witness the most reasonable promises of the wild valleys of a certain principality, and under the auspices of "Our Royal Highness," devote ourselves to the slaughter of the "antlered monarchs" with which his forests are abundantly stocked. The crack of the rifle is a more healthy sound than the rill of the pea at *roulette*; it is more profitable to bag snags than to lose napoleons, and hunt deer rather than fortune. Physically and morally, we feel the bracing effect of the change of life, and speedily discover that the clear mountain air produces more satisfactory results than all the brumens of Germany, polluted with so much social poison. It is a cheering sight to see these well-appointed four-in-hand drags driven by a party of four or five gentry, and "Our Royal Highness's" chateau, waiting for their complement of sportsmen. Here we have no bows or ribbons, or grooms in pen-wiper liveries, preading over the screws which the fast men at "our watering-place" love to display; the horses are too well bred to require the assistance of gaudy trappings to show them off, and the whole turn-out is unexceptionable in point of taste. As we creep up such a rocky road, the picturesque angle of the old castle, and down the broad avenue into the dark pine woods the blood drenches in our veins, the horses feel the exhilarating influence, and our near leader—a thoroughbred chestnut—shows constant symptoms of a desire to accelerate the pace. Whenever we come to the slightest descent, the *schützen* of the principality, in German, are consequently that it is to hold back a carriage going down hill. There is more up than down-hill in the road we are taking to-day, however. Gradually the valleys narrow; huge masses of granite rock impend over the road, projecting above us in fantastic shapes, sometimes, to all appearance, holding their precarious perches by a very uncertain tenure. Gloomy narrow

chasms, down which dash mountain torrents, open up from the road; the edge of the precipices are fringed with pine-trees (wherever there is hiding-ground pine-trees cling), and throw a still darker shade over these sombre recesses. We wind through the forest, sometimes zigzag, sometimes following the bed of a stream along a good road—for "Our Royal Highness" is experienced in the art of finding a good road, and is not in the ruts. Here there is an open green space, where a *châlet*, or hunting-lodge, has been built. It is a picturesque wooden structure, with overhanging eaves, and is surrounded by a wild-looking crowd of men, armed with sticks, who are drawn up in array, as though in anticipation of a "row." These are the beaters, unarmoured and without any distinctive officers, or under-keepers, while the commander-in-chief, in the person of head keeper, advances to report progress, and consult with "Our Royal Highness" as to the tactics to be pursued. They are both old sportsmen, deeply skilled in the art of venery, and we feel every confidence in the result of their consultation.

There is a profound hush in the air about the arguments which we English, with our prejudiced notions upon the subject of foreign sport, are not prepared for. The costumes of the sportsmen are almost precisely the same as they are in England, except that some of the shooting-coats are of leather instead of velvet, and knickerbockers are replaced by jack-boots, reaching to the thighs. The sporting colour throughout Germany is green; cuffs and collars, and wide-awake hats are often, therefore, of that hue. The keepers are all in a uniform of grey, with green facings, and look as if they belonged to one of the metropolitan Volunteer corps. Half a dozen bloodhounds, with pedigrees rivaling that of "Our Royal Highness," and ancestral traditions of being performed in the chase of the harts and stags, are standing in leash, watching with intelligent eye the progress of events. Two waggoners are at the door, one loaded with goose-quills, another with fagots, pointed sticks, and bundles of rags and string. We are at a loss to conceive the object they are designed to serve; but the first beat enlightens us. A sternly pointed stick, complete in the shape of a lance, is thrust into our inventory of it; we are ready to start "Forwards," says the commander-in-chief; and we plunge into the woods. Half an hour's scramble through them brings us to the side of a steep hill, running along the edge of which we observe a line, apparently of many-coloured towels, fluttering in the wind. We then discover that the towels, which the whole of the hill-side is enclosed by a girdle of quills and towels, the thin pointed sticks are the supports for miles of clothes-lines, on which are twisted quills instead of socks, and bright-coloured rags instead of shirts, the object being to frighten the deer and prevent their escaping from the area which is being beaten. The hill-side is covered with this line and young pine-trees, and at the bottom runs a stream along a narrow meadow, behind which the opposite side of the valley rises abruptly, covered with heavy forest. The sportsmen are now placed at favourable spots within the lines. "Our Royal Highness" encloses himself in a sort of stand, covered with boughs of trees, so as to form a screen, while the commander-in-chief, and a good deal of company, take up open ground. We are posted separately, in glades and passes, where we must make up our minds to be contented with a snap shot. We hear the signal given at last: the cries of the beaters, the words of command, and the yelp now and then of a dog, are the first sounds; then comes the crack of a rifle; then another, and another.

They are having all the fun at the other end, evidently. No! there is a rush and a crackle in the bushes near us, then a dead silence—breathless expectation! *b-r-r-r-r*, rap, rap, rap, goes a distant buster; click goes the hammer of our rifle; then crash comes a fine young stag, bounding down ten feet of slope into the bed of the stream, just where we are posted. We turn, so that he is only visible for a moment; then he shows again fifty yards off; the fluttering rags will lead him back; no they don't—they are an imposition; bang goes our rifle; a spring starting into the air, a contemptuous but somewhat sponkonic kick of the hind legs, and our friend vanishes; we are naturally certain we hit him,—must have done so. Now, if we had only been standing ten yards lower down, we should have been certain of him; what a pity. Load again, grumbling, and thinking what we shall say when we are asked how we came to miss. What! just as we are ramming home, a roe-buck darts out almost over our legs; we won't say anything about having seen him. Silence again, then a series of sharp reports like fire-works. Either the game is plentiful on the opposite side of the cover, or the shooting is bad. There goes a large stag bounding along the ridge, out of shot, and apparently unharmed; as we watch him gracefully carving over the ground, with head thrown back, and antlers almost touching his withers, we observe a movement on the steep hill-side, and roe-bucks coming in a single file, one after another, standing on a crag in evident doubt what to do. "Our Royal Highness" appears at the same moment, and points to the game; it is a long shot, and we put up the three hundred yard sight. Shall we sit on our heels and show him what we do at Hyde? Our friend the buck kindly obliges us by standing close; another second, and he is out of the rock;—a single snipe, and he is the result of the report as we are, he shows it by vainly attempting to get upon his legs again; we by loading as if nothing unusual had occurred,—quite the sort of thing we are in the habit of doing. "A good shot," says "Our Royal Highness," who joins us. "There are 130,000 men in England who could do what he is doing, but only one of them would do it as well as he." We are really modestly devoted to our neighbour, and we are not a little surprised to be put to the test. Rule-of-three-men, which "Our Royal Highness" proceeds manly to solve: If an Englishman can hit a roe-buck at 300 yards, at how many yards could he hit a Frenchman? So absorbed is he in the calculation that he misses a stag which is crossing the stream a long way down, but only shows for a second. He can afford to be a little tells us, for he has already killed one stag this morning, and wounded another.

Meanwhile the beaters show one after the other, and the party collects to recount their various experiences. Result: two stags killed, two supposed to be wounded, three roe-bucks killed, one wounded. We take the dogs up to the scene of our first shot, and there, after much search, find, sure enough, a plentiful sprinkling of blood. The discovery is made known to the most experienced hound; he sniffs it eagerly, examines minutely with his nose the scent for some yards, returns, looks wistfully into the face of the keeper, and lies down; by which course of procedure he means to intimate that the wound may be slight, or may be mortal, but that he is not sure. "Dog," says "Our Royal Highness," "Dog's verdict decisive: let us go and see what is to be the fate of the one wounded by 'Our Royal Highness'." It is with some difficulty that we discover a drop of blood here. Same dog consulted: he sniffs

about, comes back, jumps upon the keeper, and is off again on the scent like a shot. Keeper says, "Dog says we can get this stag." Dog accordingly called in: the scent is too hot; the stag must be allowed a little repose—left to think over his miseries, or he may have strength enough to get out of the woods of "Our Royal Highness" if too hardly pressed. So he goes to another beat. We have not been posted three minutes when out jumps a hind, and, apparently aware that she is an unprotected female, and, as such, entitled to respect, stands and looks at us not fifty yards off. We return the stare, take off our hat, and she trots majestically away. The result of the beat is another stag, and then we return to our wounded friend, two hours having elapsed. The dog works wonderfully, never out of his mind, even at a double back; crosses the stream, and picks up the scent on the other side with a marvellous instinct. "Our Royal Highness" follows close, and we all come out on a piece of open land at the same time, to see a magnificent stag limp across it. In a few moments he is down, one dog at his nose, another at his ear; he has been wounded through the side of the neck, but still lives. "Royal Highness" is exhausted, and a well-directed thrust with a hunting-knife ends his mortal career. Then commander-in-chief presents each of us with a sprig of pine,—for we are entitled to this trophy when a royal stag has fallen to the gun of any of the party, and the antlers of the one before us count sixteen points, not including a ninth cervicene which cannot legitimately be considered one.

We are contented by our success for a pelting shower of rain, which wets us to the skin, and drives the game out of the lower cover into the tall woods. Thither we follow them. We are striding towards the drive, when another buck glances like a meteor through the trees, a hundred yards off. We make a rush for it, but it is out of no use; the vital energy is almost wiped out; "I am not quite ready for the French yet, I'm afraid."

"Not if they are going to dodge through the bushes like rabbits," we growl, and load suitably.

The beech-woods are pleasant to walk through, but they give us no sport, and we are very well satisfied with our bag, nevertheless.

Our drags are waiting for us at a picturesque little village embosomed in the mountains, and we march through it triumphantly, our sprigs of pine producing their proper effect. We drive back by another but equally beautiful road, and on the way a heron soars above us, and lights in a tarn to the west. We are the last of the day, and the "Royal Highness" descends his rifle in hand; before he gets within a hundred yards of the tarn, the heron perceives him, and with a great splash and flutter takes wing again,—not to go far, however; and as the majestic bird comes topping headlong down, we are consoled for the last episode of the buck. It is no disgrace to be beaten by such a shot, of course, and we lament that it is not in our power to give "Our Royal Highness" a company in the 100th Middlesex Volunteers.

A mild balmy evening succeeds the rain, and we arrive in time to dine as usual in the summer garden, beneath tall old trees, close to a fountain where the water-jets fall into wreaths of floating flowers, and make soft music to us as we sit on the terrace with our cigars, and listen to the thrushes playing. For we live in the open air when the weather permits it; but this summer, in Germany, as elsewhere, the rain has been incessant, and has spoiled both our *ad hoc* existence and our sport.

Sometimes we sleep all night at *châlets* in the woods, and have a jocular picking and a good deal of fun. Sometimes we disrobe with bearded dogstoppers, and stroll through the forest with our rifle, stalking our game; or, during the rutting season, calling them by blowing on leaves of grass held lightly between the two thumbs. Then innocent roe-bucks come trotting confidently up to the supposed fair one, and only discover the base advantage which has been gained by their gallantry on receiving a ounce of lead in their too susceptible hearts.

It is with a heavy heart that we turn our backs upon the woods of "Our Royal Highness," and all the amenities of his hospitable court, and watch with a longing gaze the last turret of the castle, stocked with his trophies of a century's sport, disappear in the dark shadows of the waving pine-trees.

SPIRITUALISM UNVEILED.

A LECTURE was delivered on Wednesday night, at St. James's Hall, by Mr. Henry Norm, in which he gave an account of inquiries recently made by him into the phenomena of "Spiritualism." Mr. Norm stated his opinion that those best able to expose the knavery of spiritualists have been those who have no motive or opportunity to investigate the subject, and have been able to do so on their own terms, before the public. When any flagrant case in state administration is to be inquired into, it is the custom, he said, for the Government of this country to appoint Scotch commissioners to point out what is wrong, and set matters to right. Cagliostro, the most eminent spiritist in Europe, the general, succeeded in his career, and he learned his trade in Europe. He came from Rome to Paris, from Paris to Vienna; in every new capital gaining fresh notoriety, and swindling his dupes out of larger and larger sums of money. But at St. Petersburg, according to Mr. Thomas Carlyle, he came in contact, for the first time, with a native of these islands. A Scotch doctor was then in the service of the Czar, who picked the blunders of Cagliostro, and never allowed him to be blown up again.

Now spiritualism, continued the lecturer, has undergone the ordeal of a Scotch committee, and has passed through it unscathed. Lord Brougham, the Chancellor of the University of Edinburgh, the most acute lawyer of the age, and Sir David Brewster, the principal authority on the laws of the eye, and a question of the subject, the editor of an encyclopædia, and the author of a work on magic, have sat in committee on the subject, and have not only failed to detect any fraud, but have been obliged to own that they saw and heard things which they could not account for. But lawyers and professors, continued Mr. Norm, are not the persons to be trusted in such matters. Many a man, who is a person who can go to a railway-crossing, see the express train pass at full speed, and yet be able to tell, when it has disappeared, the number of passengers it contained, how many were male and how many female, how many were spectacles, how many were light, and how many were dark, and how many were of the red hair, many read the newspapers, how many could be engaged in converse with a dog. Neither an acute ex-chancellor, nor a profound optician, is a match for a Red Indian, in any act which implies cultivation of the senses, and neither can, in this respect, cope with the professors of legendman.

Louis Napoleon, with that agility which characterizes him, first discovered that spiritualists should be dealt with by the orthodox professors of natural magic, just as the wisdom of opening a new colic-should be tested by a veterinarian or military engineer, and not by a magister of the desert. Here is the way in which the modern science of magic was brought under the notice of the French emperor. Algeria, it appears, is kept in constant hot water by Arab prophets,—a class of fanatics who, imposing upon their countrymen by conjuring tricks, lead them to believe in absurd predictions and prophecies. A recent court case tells us that the presence of the sceptic disposed the emperor to weakness to the French Government than the Arab soothsayers. The evil was increasing; something had to be done; and in a brief moment it occurred to the Emperor to send Robert Houdin into the country to study the subject and draw up a blue-book. The professor had no difficulty in understanding all the necessities of the Arab and in repeating what they did, with tricks of his own worth two of theirs. He dispelled the delusion, as the African sun scatters the clouds wafted over the Atlas to the desert. When Mr. Houdin, the spiritualist, repaired recently to the Court of the Tuileries, the Emperor, mindful of old favours, invited Houdin to be present at the *seance*. He came, but the oracles were dumb. The presence of the sceptic dispelled the spirits, who, under such circumstances, are always shy, and they would not answer.

Mr. Novra, an English conjuror, told his audience that he determined to investigate the wonderful phenomena which had staggered Lord Brougham and Sir David Brewster. In the spring of 1859 he was living at Dr. Wilson's hydropathic establishment at Malvern, and met there with several gentlemen who expressed a wish to join him in his inquiries. The fame of Mrs. Marshall and her niece was then at its zenith, their wonderful performances having found an able exponent in Mr. William Howitt. The services of these ladies were then in vogue, and it was not surprising that they were nothing remarkable, he says, in their appearance. Mrs. Marshall was an elderly and butom widow, who, to quote the poet,—

When in angry honour stalking,
Was like a dyspeptic set walking.

The niece was less plump, but also displayed a more than average development of muscle and sinew—Mr. Novra noted the fact. There was something peculiar in the appearance of both ladies which for a moment baffled the conjuror. But he soon discovered what it was. There was a want of circumspection. This was another fact. The first *seance* commenced. Twelve spirits were summoned from the deep, and proved to be in perfect working order. They made a great variety of raps—raps on the table, raps on a tea-tray, raps on the walls, and raps on the floor. A gentleman, who accompanied the ladies in a professional capacity, remarked, moreover, that the spirits were weak that evening. Then a Mr. and his wife knelt in prayer, and the process was going. That is the "cooper's knock," said one of the party—the deceased husband of Mrs. Marshall having been a cooper—whose spirit exhibits the interest it takes in one once so near and dear to it by dropping in unbidden to all the *seances* in which she takes part. The spirits lifted books, and folded two, and threw their pages. They raised the table, every now and then grasping and pinching unmercifully the legs and ankles of the observers, by what are said to be claws and hands, but letting go their hold the moment the sufferers looked down to the spot. The crowning feat came: the party sat down to a table, and put their hands upon it, when, to the amusement of many present, the influence of some mysterious force no less than two feet from the ground, at which height it remained for a time, and then gracefully subsided.

Mr. Novra, on getting home, carefully thought over all he had seen. He had noted the pitch of the imitated sounds made by the spirits, and he found that he could produce them all. He repeated the table, every now and then rubbing the tip of the middle finger in leech-wax, and letting it rest forward in short unobtrusive jerks on the smooth mahogany. The raps from the tea-tray could be produced in a similar way by the nail of the fore-finger bent under the hand. The "cooper's knock" could be imitated with the heel of the foot on the floor. The lesser sounds which proceeded from distant parts of the room could be produced by rubbing the toe-nails against the soles of the boot inside, in a way explained by Wizard Anderson. But why, it may be asked, did these sounds proceed from the chimney, the windows, the cupboard, and the roof? Conjurors have no difficulty, says Mr. Novra, in answering that question. It is a hard matter, in a room, to tell whence any sound comes; and if the direction from which it is expected is mistaken, those who hear it will not believe that it proceeds from any other spot. This the lecturer illustrated. With a knife he appeared to strike a tumbler which stood on his desk, and to make it ring loud and clear throughout the hall. No one in that vast audience could tell the spot from which the sound came, but he called out an assistant from behind a screen at the other end of the room, who showed the instrument which had really made the sound,—a glass vessel of a totally different kind, and yielding a different sound from that used by the lecturer.

In the same manner Mr. Novra showed how the spirits might be made to write on the floor, pinch and gripe, and fold down the leaves of books. The experience he has had as a conjuror had familiarized him with the vast importance in his profession of flexible feet and ankles in all tricks of hyperleamism. To divert the attention from the spot where the work is done, and to do what the feet do, is generally done with the hands. Indeed, he says, the great secret of the success of jugglers, and, above all, of conjurors, by placing the sole of one foot on the top of another, are able to hold and snatch away slates and books, and much heavier articles, and, in short, to perform all the tricks performed by Mrs. Marshall and her niece. They would have no difficulty in picking and grasping the legs of persons at a *seance*, by clapping their hands between the soles of the feet and over each other, when a pinch is meant, and between the upper leathers when a gripe is given. Mr. Novra concluded, from the fact that grips and pinches were only felt near the undisturbed petticoat of the ladies, and close to the floor, that they had been produced by the conjuror. He, therefore, felt anxious to see the upper leathers of Mrs. Marshall's boots—the wear and tear of which he felt certain would exhibit traces of what they had undergone.

The table trick, too, he thought he could account for. Placing his right leg over his left knee, and using the latter as a fulcrum, he found that he could, seated on a chair, without great muscular effort raise an ordinary

cheap and light round table with a centre column and three feet. He felt convinced, too, that the sinewy limbs of the younger performer had a share in this phenomenon. At another *seance* his surmises were to be tested. The spirits were not at all shy; the first *seance* gave them confidence. The table rose to the former level. No sooner was it poised, than the Hercules of the party, as arranged, quickly threw out his foot, and held it tight against the lower surface of the pillar. Another limb he caught there, a limb of flesh and blood, active and muscular,—which, despite its frantic efforts to escape, was firmly clutched, and the person being thrown into holes and shreds, like a pair of housemaid's gloves, by the long habit of pinching and grasping to which they had been used.

A performer in female attire, with a black veil, and without crinolines, illustrated all the phenomena as they were referred to by the lecturer. The spirits were not at all shy; the first *seance* gave them confidence. The lecturer, as she raised the table, read the description given of the process by the author of the famous article in the *Cornhill Magazine*, and proved its accuracy by showing that the jerks it makes in starting from the floor, the curves it forms in its ascent, the slope of the top towards the medium when it is fairly poised, and the graceful motion with which it subsides to its old place, are all the necessary conditions of the process he has had the quickness to detect. In conclusion, Mr. Novra said that he had explained all the spiritual manifestations he had been permitted to witness; and that if means of observation were afforded him he would undertake to explain all others. Taking up the gauntlet, a young girl, in spiritualistic raiment, as the "infant magister," but now turned fifteen, ascended the platform, and raising a heavy talisman's goose from its long to its narrow end by touching it with her little finger, defied the sceptical lecturer to follow her example. But Mr. Novra knew the trick, and successfully performed it.

An old professor, who had been a member of the Society for Spiritualism being received as accounting for the phenomena of spiritualism. Seated in his arm-chair, he had floated about under the ceiling of his own room, as in a balloon, suspended and poised in that position by jets of magnetic fluid, projected at him from the finger-tips of a wonder-stricken circle of friends on the floor. The remainder of the old gentleman's tale was drowned in the laughter of the audience; and so ended the first lecture of a series which we trust to see continued.

MODERN ENGLISH WOMEN.—No. III.

THE SCHOOLGIRL.

SCHOOLING is of two kinds: the ladylike and the rough; one where the polishing is so incoherent it cuts away the very substance of the silver—the other, where it is so sparing, that the rust and tarnish come up through the channelling, and prevent the metal from being fit for use. The ladylike is the one to be preferred; nature being pretty sure to supply to the woman what is wanting to the girl if nature may be left to herself, and not stifled out of being by quacks and their deadly nostrums. A school where a stricter attention is paid to deportment than to morals; where how to keep one's carriage—how to carry one's self—how to be a partner for the next dance, are matters more carefully insisted on than truth and honesty, and courage and unselfishness, is about the worst place of training that can be found; but there are many such for the higher classes, to whom this outside polish is a species of badge or shibboleth which marks the order, and rules it out from the vulgar herd. Such a school as this stands at one end of the list; at the other is the vulgar, rude, mangling establishment, where the girls are calculated at just so much a head, and worth just so much margin of profit; where they are fed in herds, and taught in droves; where no individual attention of any kind is given to them, not even to the letter-paying boarders, and no attempt made at refinement of manner or taste at all; where they are scolded taught by mechanical routine, and not educated at all, and where they are treated as so many articles of merchandise, like a set of young calves, for instance, taken in to be reared upon economical principles. Terribly hazardous diseases are these, full of dangers and unexpected chances, where there is neither care nor pity, but from end to end for who is there to watch how the young souls are growing, or where the erudite thoughts turn—schools where often habits of deceit, and ideas illicitly evil are formed, to the sullying and destruction of a whole after-life.

Of two kinds, also, is the course of instruction laid down for our unprinted women. There is the higher, which crams the young mind with learning of a shallow scientific kind, of no useful or practical utility whatever; with "history which is not to degenerate into factology;" with botany which has nothing of the fields and woodlands in it, but is only a dry, dull, class-room anatomization; with composition where there is neither power nor poetry, but the highest prose sacred to "précis-writing," where there is no occasion, and where there are twenty classes in the week, which means an occasional hour or two for studies, any one of which needs a lifetime to master. Twenty classes a week, and no time left for thought, for exercise, or girlish freedom; no time left for the womanly work which has to come; no time left for youthful sciences, where there is as much of mental growth and development—but all the precious hours devoted to the great Moloch of sham science, which not one-third of those young heads can understand, even to that superficial degree allowed, and which not one-tenth will keep up after they leave the walls of that gloomy "college." And there is the lower kind, which gives a still more shallow and unprofitable "accomplishment," and does not do more than of more than the outside layer, where French is acquired which no Parisian could understand, and of which not a rule is thoroughly learnt nor an exercise intelligently framed; where music is required of vulgar execution, never exact, and not a passage rightly rendered, because never understood; and

portly presence approaches and addresses the genuine visitor, "in the Lancashire dialect," on the subject of sculpture generally. The choice of the provincial dialect is only one of the many fine strokes of art with which the case abounds. Then the parties "get into conversation"—fatal error; from that moment the cleaning-out of the second person in the dialogue was only a question of time. The next move of the respectable-looking man who spoke the Lancashire dialect was to ask his companion the hour. Drawing "a valuable gold watch from his waistcoat pocket," the victim gives the information. Would he have seen a twinkle in the eye of the portly one, as he valued it to a fraction, and said, mentally, "It is mine?"

Scene the second, in the bar of the Museum Tavern, where the "respectable appearance" is treating his new friend to a glass of ale, and talking in the Lancashire dialect of the important business that has brought him to London. At this point they are joined by "a tall man of consumptive appearance." Note the contrast of the consumptive one with the "portly" figure of the first actor; what an eye for effect your knife possesses! The tall and pale party introduces himself as just up from Manchester; and all three resolve to visit the United Service Museum. Not gaining admission (as foreseen) they walk about the Horse Guards; and the third scene begins in another public-house, with an additional character in the action—a "man of florid complexion," just arrived from Douglas, in the Isle of Man, who was the society that they are in a doubtful neighbourhood, for he had been "fleece out of two pounds" there; not that he cared for such a trifle—not he; a relative had just died and left him £7,000; he had plenty of money—look here! And he produces what appear to be a roll of bank-notes and a handful of sovereigns.

Now, all this must have been good acting; "overdone, or come tardy off," as *Hamlet* says, the grossness of the trick would have betrayed itself. Dialogue and "business" were both well studied; so much so, that the real part of the piece begins to feel superior in shrewdness, and advises the sharper to take care of his money, or he may be fleeced out of the whole of it, since he did not know what society he was in. The "florid-complexioned man" with the deceased relative and the £7,000, "laughed at this idea," as well he might; and offers to "stand a bottle of wine," like the *millionaire* as he is. The drama then progresses more rapidly. There is a challenge to the victim to test his skill in rifle-shooting and an adjournment to a rifle-gallery, which turns out to be a skittle-ground. It is no matter; the three gentlemen are accommodating; the florid man, the consumptive one, and the portly party, will play skittles. But the latter thinks the skittle-ball is of iron; bets the victim a shilling it is, and victim cuts it with his knife, and has a shilling handed him. Nicely calculated all this; three fools, one with plenty of money, all ready to lose, and pay; it may prove a good day's work to a sharp Londoner, whippersnapper.

The florid man plays skittles so very clumsily, that he loses game after game to the portly one, to the amount of several pounds. A safe party to play with, thinks the victim—he is sure to lose. So victim plays him; but, change to say, that time the victim plays very badly, and, to the contrary, victim loses three shillings in a trice; the sequel it will be observed, is not made at once. Suddenly, the party of very respectable appearance offers to play victim for £10; not having it in coin, he hesitates, but is reminded he has a watch—the watch pulled out in the Museum. It is again proposed, and consummated, and proposed to be only pinhead by the florid person, who bets the Londoner £3 it is nothing else. Victim then thought the florid man a "fat" indeed, as the watch was a "family relic"; and, tempted by the certainty of winning £3 so easily, actually goes out and pawn the "family relic" for £6, thus gaining the bet. Then the final coup is made. The consumptive one on the watch, and the proceeds of the wager, are staked on a game of skittles, and lost to the consumptive man, and greediness is left without a shilling.

Then "a thought struck him" that he "had been done,"—and so he had been—thoroughly. But during the whole process he never suspected his danger; to the last moment he believed "all three to be respectable," and "considered the florid man a flat"; and out of a flat with a roll of bank-notes in his pocket something might be made; so in seeking a little wool the victim was shorn!

It is a very old trick all this, nearly as old as ring-dropping. The details vary, but the main incidents are always the same; and the success of this class of sharpers is something amazing. It could only be done by first-rate acting; so good is it that a canny Yorkshireman, who was thus cheated of £150 the other day, was blinded by it, and when giving evidence of his loss actually enjoyed the affair as a joke, and laughed immensely, though it was his own property. The success of the affair, the money, seemed, to him, "a thing" was so cleverly done." No professional actor ever received such a tribute to his powers. Truly, this perpetually-repeated drama of the streets is a proof how much misapplied talent is floating loose upon the world!

THE GEOGRAPHICAL SOCIETY.

AUSTRALIA.

Most interesting despatches have just been forwarded to the Geographical Society from Adelaide. The possibility of traversing the continent has hitherto been a matter of doubt, but the problem has, by one daring venture, been almost solved, and a communication from north to south established. To Mr. Macdonald Stuart must be awarded the praise, assisted, as he has been, by his warm supporters, Messrs. Chambers and Finke. Mr. Stuart accompanied Captain Sturt, in 1836, on his remarkable expedition to the centre of the continent, and has since that time performed several hardy explorations into the interior. In March last, with only two companions, he left Adelaide,—to which place, after an absence of many months, he has lately returned in safety.

During this almost unexplored country, the party has experienced great hardships, from want of water, and from the hostility of the natives, by whom he was obliged at last to retrace his steps towards the south. These

In 1839, Mr. Stuart returned to Adelaide, after having reached longitude 135°, latitude 27°—a distance 90 miles beyond the point reached by Leach, in 1837. The country improved as he proceeded, being free of alluvial soil, intersected by numerous ridges from 100 to 120 feet in height, from the summits of which copious streams of clear water issued, and which were covered with alluvial pasture.

natives are described as resembling, to a certain extent, the Malays, who are in the habit of frequenting the northern coast of Australia in search of "trepan." The party reached latitude 18° 47', and longitude 134°, their farthest north being within 300 miles of the Gulf of Carpentaria on the north-east, and Cambridge Gulf on the north-west, after having traversed above 1,500 miles of route. Mr. Stuart had consequently arrived at a point about parallel with, but to the eastward of the farthest point reached by Mr. C. Gregory, in 1856, in his ascent to the sources of "Stoke's" Victoria River, from the north coast.

Instead of the arid desert we have hitherto been led to believe, and as has been asserted by a able geologist as Professor Stokes, in opposition to Colonel Gawler, the portion traversed by Mr. Stuart, was in many parts covered with fine pastures, with palms and gum-trees. The dip of the land appeared to be towards the north-east. Assisted this time by the Colonial Government with £2,500, Mr. Stuart has again started for the interior, determined to traverse the land to the north coast of the continent. The full accounts of the above expedition, with the various maps and tracings, have been despatched to Sir Roderick L. Murchison, for presentation to the Geographical Society.

NECROLOGY OF EMINENT PERSONS.

THE EARL OF ABERDEEN, K.G.

On Friday, the 14th inst., at Argyll-house, London, aged 76, the Right Hon. George Hamilton Gordon, fourth Earl of Aberdeen, K.G., K.T., &c. Lord-Lieutenant of the County of Argyll, &c. &c. &c. of the House of Commons. Referring our readers to another column for a general account of the policy and public life of the statesman so recently deceased, we shall content ourselves here with placing on record the leading facts of his life. The eldest son of the late George Lord Haldy (who was eldest son of the first Earl of Aberdeen, but died in his father's lifetime), by Charlotte, youngest daughter of the late Wm. Baird, Esq., of Newbyth, he was born Dec. 28, 1784, and educated at Harrow, where he was the contemporary of Lord Byron, and of Lord Palmerston and Ripon, and the late Sir Robert Peel—all three in succession Premiers. He entered St. John's College, Cambridge, in 1802, and graduated M.A. in 1804. Having gone the "grand tour," which he extended by travelling into the Peninsula, he was in 1806 one of the Scotch Representative Peers. In 1813 he was appointed ambassador at Vienna, and was one of the Plenipotentiaries who signed the Treaty of Paris in 1814. On the conclusion of peace he was created a British Peer, under the title of Viscount Gordon of Aberdeen, in the Peerage of the United Kingdom. In January, 1828, he accepted office, under the Duke of Wellington, as Chancellor of the Duchy of Lancaster, a post which he exchanged a few months later for that of Secretary of State for Foreign Affairs, but retired with his party in 1830. He held the seals of the Colonial Office from 1831 to 1834, and was again in 1834-5. On the return of Peel and his party to power in 1841, Lord Aberdeen resumed his former post at the Foreign Office, which he held till the break-up of the administration in 1846. On Sir Robert Peel's death in 1851, he became the acknowledged head of the Peelite party, and in 1852 he was requested by Queen Victoria to form a Ministry, on the defeat of Lord Derby and his party in December, 1852. He then formed the "Coalition Ministry," which lasted until February, 1855, when Lord Aberdeen resigned, owing to dissensions in the Cabinet, and the popular discontent of the nation, which was expressed by the Crises, since which time he had lived in retirement. Lord Aberdeen was twice married: first, in 1805, to Catharine Elizabeth, eldest surviving daughter of John James, first Marquis of Abercorn, who died in 1812; and secondly, in 1815, to Harriet, daughter of the Hon. John Douglas, and widow of his brother-in-law, (who died in 1833), he has four sons, all surviving—Lord Haldy, M.P. for Aberdeenshire, who succeeds to the title; the Hon. Col. Alexander Gordon, C.B., Deputy Quartermaster-General, and extra Equerry to H.R.H. the Prince Consort; the Hon. and Rev. Douglas Gordon, Canon of Salisbury, formerly Rector of St. Anne, Middlesex, and of Earlsfort, co. Tyrone; and the Hon. Arthur Gordon, who was, for a short time, M.P. for Beverley. There are two points in the public career of Lord Aberdeen, which we shall place on record here, as they seem to have occupied the notice of all the British press in their recent obituary notices.

In the first place, though at the head of a "Coalition" Government, the unity of which might have been immensely increased by a judicious distribution of political prizes in the shape of coronets, Lord Aberdeen did not create a single peer during his tenure of office; and secondly, we have the best authority for asserting, that in 1846, when Sir Robert Peel had failed, it was Lord Aberdeen, who, by his personal influence and authority, succeeded in obtaining Her Majesty's most gracious consent to the proposed repeal of the existing Corn Laws.

SIR T. D. LEGARD, BART.

On Monday, the 10th inst., aged 67, Sir Thomas Digby Legard, Bart., of Ganton, near Malton, co. York. The deceased baronet was the elder of the two sons of the late Thomas Legard, Esq., of Ganton, by his wife, Sarah, daughter of — Bishop, Esq., and was born May 30, 1803. He was educated at a Gentleman's College, St. Margaret, Oxford, where he graduated B.A. in 1824. He succeeded to the title on his father's death in July, 1846, and was a Justice of the Peace for the County of York, and a Magistrate and Deputy-Lieutenant for Yorkshire, married, in 1832, the Hon. Frances Drumcay, daughter of Charles, late Lord Faversham (by Lady Charlotte Legge, only daughter of William, second Earl of Dartmouth), and sister of the present peer, by whom he has six living sons, three sons and a daughter, besides five daughters who died young. The title, which was created in 1660, devolved on his eldest son, Francis Digby, ninth baronet, who was born in 1833. The first baronet was John Legard, Esq., the representative of an ancient Norman family, who resided at Scarborough, and was a friend and ally of the friends of those gentlemen who, on General Lambert's Republican intentions being openly

the Hon. Frances Drumcay, daughter of Charles, late Lord Faversham (by Lady Charlotte Legge, only daughter of William, second Earl of Dartmouth), and sister of the present peer, by whom he has six living sons, three sons and a daughter, besides five daughters who died young. The title, which was created in 1660, devolved on his eldest son, Francis Digby, ninth baronet, who was born in 1833. The first baronet was John Legard, Esq., the representative of an ancient Norman family, who resided at Scarborough, and was a friend and ally of the friends of those gentlemen who, on General Lambert's Republican intentions being openly

narrowed, embodied themselves under the command of Lord Fairfax, and surprised York, in order to facilitate the march of General Monk (afterwards Duke of Albemarle) out of Scotland. The Legard family are widely connected among the "County Families" of the North of England, including the Crevkes of Marton, the Grimstons of Grimston Garth, the Willoughbys of Birdsall, &c.

SIR H. DAVISON

On Sunday, Nov. 2, at Oatland, Va. Indies, from an attack of dyspepsia, aged 52, Sir Henry Davison, Chief Justice of Bombay. He was a son of Mr. J. Davison, formerly one of the proprietors of the *John Bull* newspaper, and was born in 1808. The deceased judge entered Trinity College, Oxford, at the usual age, and graduated in 1830. He was called to the bar in 1834, and in the same year was called to the bar at the Inner Temple, and for several years went the Welsh and Chester circuits. In November, 1850, he was appointed a puisne judge at the High Court of Justice, and in February, 1858, to the exalted position, which he held at the time of his decease.

SIR G. CARROLL

Suddenly, on Tuesday, December 18th, at his residence, Loughton, Essex, Alderman Sir George Carroll, Knt., aged 76. The deceased gentleman was originally a stockbroker in London, and served the office of Sheriff of London and Middlesex conjointly with Mr. Morhouse, in 1837, the year of His Majesty's accession to the throne, when he received the honour of knighthood. On the 23rd of December, 1839, on the death of Mr. Alderman Birch, he was elected Alderman for the ward of Candlewick, an office which he held till his death. He filled the post of Lord Mayor of London in 1846-7, and for many years took a leading part in the affairs of the corporation of London. Sir George Carroll was married and has left issue.

WILLS AND BEQUESTS

Walter Coulson Esq., Q.C., the eminent Parliamentary Counsel and Draughtman to the House of Commons, died at his residence, North-bank, St. John's Wood, on the 21st of November last, aged 65. He will leave date the 1st of September last, and was proved in the London Court of Probate, on the 14th of this month. The testator was married to Miss Mary Ann Coulson, daughter of the late Mr. William Coulson Esq., (the testator's brother), of Chester-le-Street, Regent's Park, and Keneage, Cornwall, and with his two nephews, the Rev. Thomas Burling Coulson, M.A., and Walter John Coulson, Esq., Surgeon. Probate was granted to Mr. Walter John Coulson, Esq., on the 14th inst. The testator's will was proved, and was sworn under £12,000. The testator has disposed of his estate both real and personal, as follows. He bequeaths his landed estates situated in the counties of Kent and Norfolk, and elsewhere, to his brother for life, and he also takes a life interest in the residue of his real estate, and the residue of his real estate will devolve to the testator's two nephews, to whom he has left annuities of £150; also a very liberal annuity to his housekeeper, for whom he has bequeathed £100 per annum. He also leaves £1000 to his wife, and £1000 to his daughter, and the whole of his personal property. The will is brief, well given, and clearly expressed. The attesting witnesses are James Pooley, Esq., and William Reynolds, Esq., both of Lincoln's-inn-Fields, Solicitors. [We beg to refer our readers to the *Standard* of the 22nd inst. for a full and detailed account of the will, and the title "Men of Mark."]

The Right Rev. Henry Peppé, D.D., Lord Bishop of Worcester, who died at his episcopal residence, Hartlebury Castle, Stratford-upon-Avon, on the 13th of November last, at the age of 78, had executed his will in 1852, and to which he added two codicils, dated respectively in 1853 and 1859. He appointed as executors his nephew, the Rev. Herbert George Peppé, M.A., Vicar of Grimsley. Probate of the will was granted by the London court on the 11th of the present month, to his eldest son, Philip, the acting executor, who has sworn to the personal property as under stated:—*Real Estate*,—the Bishop's Palace, Worcester, and the Bishop's Palace and Rectory in the Lew, Clergy, Mutual, and University Life Assurance Offices, and advances in railways and canal companies. The bishop has bequeathed to his relict, who is a daughter of the Right Hon. John Sullivan, and grand-daughter of the Earl of Devon, a life interest in his personal property, which, on her decease, is to be divided among his four children. To his younger son he has bequeathed his works on divinity, together with his sermons and manuscripts. The bishop's two daughters were married to clergymen; the eldest is the wife of the Rev. Edward Widdowson, Rector of St. Andrew's, Worcester, and the youngest is married to the Rev. W. H. Lyttelton, M.A., Honorary Canon of Worcester and Rector of Hagley, the brother of Lord Lyttelton. This venerable prelate held the see of Worcester from the year 1841, and is succeeded in the see by the Rev. John Henry Peppé, M.A., who was educated at St. John's College, Cambridge, and who is Chaplain to H.R.H. the Prince Consort.

The Right Hon. Louisa, Countess Dowager of Craven, who died at the family seat, Hamstead Lodge, Hamstead-Marshall, Berks, on the 27th of August last, at the age of 78, made her will several years ago, appointing her son, the present earl, sole executor, who proved the same in the Provincial Registry on the 17th of this month, the personal property being worth under £8,000. As the will was made several years ago, it was not surprising that the testatrix should give R. entire. "This is the last will of me, Louisa, Dowager Countess of Craven. I give to my youngest son, Frederick Keppel Craven, the sum of £500, and I give the remainder of my property and effects whatsoever to my eldest son, the Earl of Craven, and appoint him sole executor. In witness, &c. Dated the 10th day of August 1867. Louisa Dowager Countess of Craven. James S. Wickens." This lady, in early life, dedicated her talents to the stage; she was a performer in light comedies and drama, and by her pleasing manner and truthful delineation, she became a very popular favorite at that period. In 1807 she married the Earl of Craven, and by the refinements and ease of her conversation, she became a favorite of the most variable disposition, who eminently prized that sphere to which she was elevated.

The Hon. Sir Henry Davison, Knt., late Chief Justice of the Supreme Court of Judicature at Madras, and who died at Cotonmound, in the East-Indies, on the 4th of November last, had made his will in the year 1853, which is entirely in his own handwriting, and is comprised in a very few words, giving the whole of the property to his daughter. It is in words to this effect:—"Bombay, 30 June.

1858. I hereby bequeath all my property to my friend James Clay, Esq., M.P. for Hants, in trust to pay my debts, and apply any surplus in such manner as they may think best for the benefit of my daughter Emily now at Mad. Telford's school at Kington." The attesting witnesses are Edward Ward, barrister, of Bream's, and Henry Gamble (Sir Henry's clerk). Probate was granted by the London Court, on the 15th of this month, to James Clay, Esq., M.P., the executor, according to the tenor of the will, there being personal property in England of the value of £1000. The executor so appointed was a learned Judge, who was formerly a barrister of the Welsh and Chester circuits, should have enjoyed his election but for so very short a period, as we find that he sank into the grave at the premature age of 60y.

Vice-Admiral Isaac Hawkins Morrison, one of the Island of Jersey, who died at St. Helier, in that island, on the 16th of August, 1856, at an advanced age, made his will in July, 1855, wherein he appointed his relict, his two sons, and his son-in-law executors. The widow has alone administered thereto, both in the Island of Jersey and in England, to whom the gallant Admiral has bequeathed his entire property. The instrument is witnessed by the Rev. Edward Yevill, Incumbent of St. Luke's, Jersey, and Captain Richard Stuart, R.N. The latter, in recent years, administered a long period in the service of the Government, and has been distinguished by several important appointments with the enemy, and, on some occasions, had to contend with fearful odds. He was created Vice-Admiral on the 21st of October, 1856.

Lieutenant-Colonel Thomas Josiah Wedgwood, late of the Scots Fusilier Guards, died at his residence at Enniskerry, in Peninsularshire, on the 7th November last, at the age of 62, having left a will bearing date in the year 1847, which was very short, and in the colonel's own handwriting; in which he had bequeathed the bulk of his property to his wife, and to his two daughters, and to his only son, having died previously to the testator, and there being no issue of the marriage, letters of administration, with the will annexed, were granted by the London Probate Court, to the Rev. Robert Wedgwood, Rector of Dunnington, Gloucestershire, as the sole executor, and the Rev. Robert Wedgwood, as sole administrator. This gallant officer shared in the dangers of the battle of Waterloo, at the early age of seventeen. The colonel was attached to that noble and distinguished regiment, the Scots Fusilier Guards, and was one of the list of retired officers. He styled himself "General Rank" in 1830.

Reviews of Books.

ENGLISH DICTIONARIES.

[First Article.]

"CAN you recommend me a good English Dictionary?" is a question constantly put to people who are supposed to be authorities on such subjects. The vagueness of the question and implicitly shows how good the querist stands in the estimation of his questioner. The questioner is presumed to be ignorant of just as definite a task as for a recommendation of good books without ascertaining any clue to the desiderated size or limitation, or dropping it all about rent. What is meant by a good English dictionary? You will probably be told that it means a dictionary that is complete, that it contains all the words in the English language, and that it is a dictionary of the kind required, that "good." All dictionaries are useful in their kind and the question here is, what kind of dictionary is implied under the mild terms "good." If you say of a man that he wore a good hat, the only thing that you mean is that he wore a hat. If you say of a man that he was helped by the description, it might be any fashion of hat under the sun—from a Norfolk to a Mousmouth cap. Strict definitions are essential to a right understanding of a word. No man can speak accurately who does not take pains to fix the meaning of his words.

diagnose, it that it was an article with which we are ill supplied. The contrary is the fact. We have before us a Catalogue of Dictionaries, which displays an amount of industry and research in this department of literature which we suspect, no other country has ever exhibited. It contains, in all, 1,000 titles, of which 1,000 are compilations and miniature compendiums for the satchels of school-boys, the pockets of adults, and the carpet-bags of travellers, there are here no less than a hundred and twenty-four English dictionaries of words, exclusive of the three whose titles are given in the title-page, thirty-two French dictionaries, and thirty-two Latin, thirty-fourteen English glossaries; seven Scottish dictionaries and glossaries; twenty etymological dictionaries; four Saxon and Anglo-Saxon dictionaries; eight synonyms; twenty-two thesauruses and bibliad; nine law; eleven military and naval; and twenty-five miscellaneous dictionaries, having reference to the various arts and sciences, besides a large collection of encyclopaedias and general dictionaries. The number of volumes is 1,200, and the number of pages 1,200,000. The reality, and that our resources in this way, good, bad, and indifferent, are much more extensive than the industrious collector of these formidable details has been able to trace. Yet, notwithstanding our wealth in dictionaries, which we have no means of estimating, we are not more than a few steps removed from the time, nobody seems to know where to look for a dictionary suited to current purposes. Not that people are enamoured in their choice by a knowledge of the riches they possess, for the popular acquaintance with dictionaries is mainly confined to the few who are conversant with them, and the vast number of dictionaries has yet to be discovered. The fault is less in the seekers of dictionaries, who go about looking for what they can't find, than in the dictionaries which have failed to supply the want. There is doubtless little excuse for the ignorance of the individual who is ignorant of the existence of the instrument with which that ignorance has been treated by the lexicographers.

It is obvious that, in proportion as our acquisitions in all branches of inquiry enlarge their bounds, the necessity for a corresponding expansion of our works of reference increases, while the difficulty of compiling them becomes more onerous and responsible. We need not go far back for an example of the rapidity with which words outstrip dictionaries. Take Walker, who published his famous critical dictionary only just before the close of the last century, and compare him with Richardson, and some notion, by no means an adequate one, may be formed

* A New Universal Etymological, Technical, and Pronouncing Dictionary of the English Language, embracing all the Terms used in Science, Literature, and Art. 2 vols. By John Craig, Esq., F.G.S., Lecturer on Geology in Anderson's University, Glasgow. London: Routledge, Warren, and Routledge. 1920.

A Dictionary of the English Language. By Joseph E. Worcester, LL.D. London: Sampson, Low, & Company, Boston: Hicking, Swan, & Brewer.

the author, in his introductory remarks, is to "take away the reproach of meanness from the handbooks to Stratford, and throw some little light on the heart of Shakespeare, by giving the reader a better idea of the land where the poet lived." The object of the author is efficiently supported by Mr. Linton, who has supplied the work with twenty-five illustrations, admirably executed. The book is printed on tinted paper, and splendidly bound. It ought to find its place by the side of the most valuable of Shakespeare's works. No more welcome gift could be made to an admirer of Shakespeare.

Adeline and Elphie's; Drama. By Frederick Wm. Wynd. London: Smith, Elder, & Co., 25, Cornhill.—The scenes of this drama are laid at the period when our fair island was constantly exposed to the incursions of the Northern seafarers. There is too much of dialogue, and too little of incident to make it suitable for performance on the stage. The story, however, is so well told, as to render its personal aggression.

Studies of Christian Character. By Bitha Fox, author of "Pictures of Heroes," "The Yew," &c. London: James Hogg & Son.—This is the romance of a young man, who, in the course of his life, has been the witness of many such scenes, such as "The Leap in the Hall," "Signal Fires," "Watchers for the Dawn," "The Friendships of the Reformation," "The Artists of the Reform," "The Captivity of Nuremberg," "The Tenth Muse," "The Red-Silk Banner," "The Fair Priestess," and the principal personages in these chapters are the Venerable Bole, John Huss and Jerome of Prague, John of Weel and John Wessel, Urie von Hutten and Erna von Sickingen, Albert Durer and Lucas Cranach, the Cobler-Port of Nuremberg, Olympia Morana, Rodrigo de Valera, Juan de Valdes, and Madame Guyon, a shifting panorama, from the seventh to the seventeenth century, in which several stirring scenes and energetic characters are portrayed.

The Book and its Mission. Past and Present. Edited by L. N. R., author of "The Book and its Story." Vol. V. 1860. London: W. Kent & Co., 51 & 52, Paternoster-row; Thomas Hatchard, Piccadilly.—This volume is dedicated to "The British and Foreign Bible Society, and to the friends of Bible circulation throughout the world." It is a fine and useful volume, and the progress made by missionaries in circulating copies of the Bible in various languages. Reports, too, are given of what is doing in the British Islands. There are several interesting facts to be found in this interesting volume, and none will probably elude more attention than the fact, that the Bible is being translated into Chinese amongst the Armenians in Turkey, in France, and finally in Italy, where it is incorrectly said, "Garibaldi, the wisest of generals, has saluted King of that country the Charles Albert who gave liberty to the Vaudois—the Bible-readers of the Alps."

The Corsica. A Tale of the Civil War. By Mary Gillies, author of "The Voyage of Constance." With twenty-four illustrations by Birket Foster. London: W. Kent & Co., 51 & 52, Paternoster-row; Thomas Hatchard, Piccadilly.—One of the best books published this season. It displays a careful study of the manners and customs of the period, and an accurate knowledge both of Corsica and Bonaparte. The brutal conduct ascribed to Prince Rupert, and which leads to the catastrophe of the story, is a gross error. The Corsicans deserve to be a popular book, and we trust its circulation may be commensurate with its intrinsic merits.

The Adventures of Mr. Anselmus; an Artful Clerk. By Carr Blackie Gent., one, &c. London: James Blackwood, Paternoster-row.—There are 270 pages in this volume. We read 160 of them without being able to discover wherefore the book had been published. The nearest approach we can make to a definition of its contents is to describe it as a story without either plot or characters.

On Charity in Conversion. From the French of R. Pire Haguet Marist. By a Missionary Apostolic. London: C. Dolman, Bond-street and Paternoster-row. A good translation of a Roman Catholic work, treating mainly on the evils of destruction.

The Leisure Hour. 1860. London: Paternoster-row, and 164, Piccadilly. The Sunday of Home: a Family Magazine for Sabbath-reading. 1860. London: The Religious Tract Society, 55, Paternoster-row; 164, Piccadilly.—Both these publications are profusely illustrated with well-executed wood-engravings, both emanate from the same source—"the Religious Tract Society"—the main difference between them being that the first is intended for amusement during the week, and the other to supply edifying and instructive reading for the hours of the Sabbath, not devoted exclusively to the service of the temple. The latter is one that is too frequently made of cheap literature, and how the skill of the engraver is employed to attract the young to publications certain to corrupt their minds, and debase their hearts, it is a matter of no small importance to be able to point to a penny publication, "the Leisure Hour," a penny weekly periodical that can be perused with advantage. Some of the tales in "the Leisure Hour" are of first-rate character; and other papers contributed are amusing and instructive. We would wish to see "the Leisure Hour" received in every family. It is not necessary to receive with "the Sunday at Home," as its title should be its passport through all parts of England.

Library Catalogue. London: Lettis, Son, & Co., Royal Exchange. All persons desirous of arranging and preserving whatever collection of books they may possess, should peruse this volume. It is a very useful work, and the compiler has well arranged) shows at a glance the title of the book, the place it occupies in the library, the name of the author, size, date of publication, the place where, and the person by whom published. At the end of the Catalogue is an index of subjects, there is an easy mode of registering books, kept together, the compiler observes, "it is an unhappy propensity with many to forget the duty of returning what they have borrowed, and thus, in many cases, had a valuable set of books been destroyed," which such a record as is here provided for the possessor of a library, "might easily have prevented."

The Library and Scientific Register and Almanack for 1861. By J. W. G. Gutch, M.R.C.S.L. London: W. Kent & Co., Paternoster-row.—This work is dedicated, by special permission, to Prince Albert, and published under his immediate patronage. In addition to the usual intelligence to be found in such works, there is in this volume a list of subjects upon which a variety of subjects not to be procured in such publications. For instance, in the present volume the article on "Geography" is considerably extended—the various heights of the mountains are correctly stated. Professor Demoulin has contributed much valuable matter under the head of "Architecture." Captain Noble has

given an article on "Astronomy," and the article on "Geology" has been rewritten. There are articles on aerial phenomena, agriculture, anatomy, astronomy, building, chemistry, gardening, hotel, human physiology, law, mathematics, mechanics, meteorology, natural history, orthography, painting, photography, physiology, statistics, therapeutics, &c. &c. &c.

FRENCH LITERATURE.

Those who have read with pleasure, and they are many, the "Life of Frederick the Great," by Carlyle, will be delighted with the "Souvenirs de Vingt Ans de Séjour à Berlin,"* just published. The author, professor of the Royal Academy at the Prussian capital, admitted at Court and patronised by the King, spent twenty years of his life in daily observation of the events occurring around him. He enjoyed the friendship of all the great men who were the co-workers of Frederick's social circle at that period.—D'Alembert, Cuvier, Vellaire, Muperins, La Mettrie, Le Marquis d'Argens, Algarotti, and others, and was an eye-witness of some, sometimes an actor in, the numerous scenes which he relates. The memoirs of M. Thielack, written from the year 1765 to 1784, when he retired to Paris. Many characteristic details, hitherto unknown, are here given of the private life of the King, of Prince Henry his brother, of the Queen of Sweden their sister, and of the mysterious Princess Anselme. These two volumes form a pleasant picture wherein a series of views are presented to the reader, portraying many of the celebrated men and women of that remarkable time.

The Duc de St. Simon and his Mémoires are well known to the English public, but it is not so well known that he possessed in his library a copy of the Mémoires of the Marquis de Dangeau, covered with the greatest annotations in 7,000,000 of his own handwriting, and which are now published for the first time. Dangeau's memoirs, from 1684 to 1720, give a very faithful and complete picture of the court of Louis XIV. and of the royal family. They contain general information which is found nowhere else, and the annotations of St. Simon, so true and so unsparring, complete the value of the book. If Dangeau were to be said to be the echo of the bed-chamber of Louis XIV. St. Simon is the echo of what is called l'air de cour, or the scandalous chit-chat of the court. The combined narration of M. Thielack and the present an historical record unequalled by any other memoirs of the history of France.

We are glad that M. Firmin Didot, the renowned French publisher, has issued this Journal of Dangeau, which will probably soon be translated into English. It is a most interesting position which the Marquis de Dangeau occupied during the last few years in almost all the states of Europe, and even in some parts of Asia, has naturally attracted the attention of historians. No complete history of that nation, from the time of its dispersion up to the present day has yet been written, although according to our classification, the people of this nation are the Jews, but also of other progress in the arts and sciences from the fourth century to the present time. Valuable information drawn from sources little known is here furnished, and the social habits and public life of the Jews during the middle ages, the schools they attended, their religious and scientific progress, and their political life, are all given. Justinian, the Kings of the Goths, and Charlemagne, their scientific and literary labours in Italy, Spain, and France, details on their best authors and their works, the improvements they introduced in different branches of manufacture and commerce are all described in an excellent and simple style. No serious reader will throw aside this book until he has read it through.

Few persons are, perhaps, aware that the idea of the unity and independence of Italy originated with Count Joseph de Maistre, the famous author of "Les Soirées de Vevey," and that it was during the time he was in the service of the Duke de Maistre, then Sardinian Ambassador at the court of Alexander I. of Russia, planned the new line of politics by which the House of Savoy was to deliver Italy from a foreign yoke. This project was at the time fully received by the court, and has since been almost forgotten. Furtini alone, in a few despatch pages in his "Storia d'Italia dall'anno 1814 sino a nostri giorni," has recalled the circumstance. Albert Blanc, a barrister of Turin, published in 1858 the political memoirs and correspondence of Joseph de Maistre (from 1803 to 1810), and therein he is proved to have been in the first definitions of Italian independence. The remainder of these highly-interesting memoirs (from 1811 to 1817) has just been edited by the same author, M. Albert Blanc. One of the remarkable facts they elicit, is that the writer was by no means such an advocate of absolute government and absolute monarchy as he was generally supposed to be. This was known in Russia, and Madame Swetchine, long before the correspondence of de Maistre appeared, and of her celebrated friend,—"People do not know him; he is not the fanatic nor the absolutist he is believed to be." His diplomatic genius and his intimacy with his intimacy were the result of his long and varied life (1811-1817) give full scope for revolutions and anecdotes of every kind, and the result is a very amusing book.

The great undertaking of François Hugo, son of the celebrated poet, goes steadily on, and the great amount of French volume of French literature has been issued. There are two new features in this work, the word-for-word translation, and the division of the Plays into certain categories imagined by the author. Each volume consists of one of these categories—Les Femmes, Malheur, Night, Dreams, and "The Tempest," Les Femmes, "Macbeth," "The Jew," "Richard the Third," Les Femmes, "Othello," "Cymbeline," "Troilus and Cressida," "Much Ado about Nothing," and the "Winter's Tale"; Les Femmes tropiques, "Anthony and Cleopatra," "Romeo and Juliet," Les Femmes, "The Two Gentlemen of Verona," "The Merchant of Venice," "The Taming of the Shrew," and so on. This peculiar arrangement, but the endeavour to render, word for word, English into French, two languages so thoroughly opposed in character, seems to us an attempt which will hardly be approved of by Frenchmen, for the faithful translation of French into English is a task which is almost impossible, if simple reason that it is almost impossible that the languages of France and England should be so different, and the necessity of using words which have no equivalents in French, or which will fail to convey to the mind the same idea if literally translated.

Notwithstanding this objection, this laborious work, which will add to fifteen volumes octavo, has this advantage, that it gives in reference, for the first

* Souvenirs de Vingt Ans de Séjour à Berlin. Par Dominique Thielack. Paris: Firmin Didot. 2 vols. 8vo. 1860.

Journal de Marquis de Dangeau, avec les Commentaires inédits du Duc de St. Simon. Paris: Firmin Didot. 2 vols. 8vo. 1860.

ADVERTISEMENTS.

CRYSTAL PALACE.—ARRANGEMENTS FOR WEEK ENDING

GREAT CHRISTMAS REVELS, JUVENILE FESTIVAL, and GIANTIC FANCY FAIR, to commence on MONDAY, December 24th, and continue on WEDNESDAY, THURSDAY, FRIDAY, and SATURDAY.

On TUESDAY (CHRISTMAS DAY) ORCHESTRAL BAND and Great Festival Organ Performance.—The Revels and Fancy Fair will be closed on that day.

The Palace will open, MONDAY and WEDNESDAY, at Nine; other Days at Ten. Admission each Day, One Shilling; Children, Sixpence. SATURDAY, Half-a-Crown; Children, One Shilling; Season Tickets, Five.

SUNDAY. Open, at 11 o'clock, to Shareholders gratuitously, by tickets.

CRYSTAL PALACE.—GREAT CHRISTMAS REVELS, JUVENILE

FESTIVAL, and GIANTIC FANCY FAIR.—On MONDAY, DECEMBER 24th, and daily during the holidays (except on Christmas Day), a continued round of amusements from morning till night, the entire building being lighted and warmed and presenting the gayest and most animated appearance. Mr. NELSON LEE will superintend the amusements.

The Entertainment will commence at half-past Eleven o'clock on Monday, the opening day, with the Royal Fane and Jolly, and the astonishing Marionettes, followed by the marvellous Wizard from Rome, Signor Falcetti, whose public performance at the Gallery of Illustration have excited the greatest wonder. Mr. J. H. Rival, well known in London as "Winton's Cure," will appear in his most extraordinary character; and the Brothers Talbot, probably the most talented "graciers" in the country, will exhibit their surprising feats; the Ohio Minstrels, whose success in London is proverbial, and whose comic versatility never fails to be rewarded by the most illustrious applause, will sing their drolliest songs, and tell their funniest stories; and in addition, those famous French Clowns, Brian and Owsley, will appear, &c. the first time, at the Palace.

The laughable shadows of last year caused so much movement, that it has been determined to have a SHADOW FANTASMIE at night, on the great stage in the Centre Transsept.

The sufficient effects must be seen to be appreciated.

Some amusing novelties in juvenile recreations will be introduced, and new features in Illumination and Decoration will be exhibited. The Entertainment will comprise Selections by the celebrated Orchestral Band of the Company, arranged in summer for the Palace, and Performances by the celebrated Orchestral Band of the Palace.

The shows of the Palace will be opened at Nine on Monday 24th, Tuesday 25th, and Wednesday 26th, and ample time will be allowed for Visitors promenade in the Palace in the evening that the accommodation by Railway may not be so convenient.

Admission as usual. One Shilling; Children under Twelve, Sixpence.

N.B.—On TUESDAY, CHRISTMAS DAY, ORCHESTRAL BAND and GREAT ORGAN PERFORMANCE instead of the FESTIVITIES.

CRYSTAL PALACE.—WET OR DRY.—FROST OR SNOW.

THE ONLY WINTER RESORT FOR ALL.

CRYSTAL PALACE.—THE GREAT CHRISTMAS TREE, in the

Centre Transsept, is now furnished with every requirement for family Christmas Trees, and juvenile presents.

CRYSTAL PALACE.—NOW OPEN, FANCY FAIR, with the

length of the Palace.—An immense collection of articles suitable for Christmas Presents.

CRYSTAL PALACE.—GREAT IMPORTATION OF FOREIGN

ARTICLES of all descriptions, suitable for Presents.

CRYSTAL PALACE.—The Largest Collection of every production in

Europe may be selected from.

THE ART-JOURNAL:

A RECORD OF

The Fine Arts, the Arts Industrial, & the Arts of Design & Manufacture.

UNDER THE EDITORIAL SUPERINTENDENCE OF S. C. HALL, ESQ., F.S.A., &c.

Monthly, Price Half a Crown.

EACH PART CONTAINS THREE HIGHLY-FINISHED ENGRAVINGS ON STEEL AND NUMEROUS ILLUSTRATIONS ON WOOD.

THE ART-JOURNAL has obtained a degree of popularity unequalled by any illustrated periodical work: its success has been commensurate with the large expenditure necessary for its production. The engravings, both on wood and steel are executed by the most competent artists, not only in England, but in Germany and France; and the letter-press is obtained from accomplished writers, eminent in their several departments. There is no topic connected with the Arts, either "Fine" or "Industrial," in which the public is interested, or requires information, that does not receive consideration and comment in this Journal, by authors best qualified to deal with the several subjects. It is obvious that a liberal as well as judicious outlay procures the best co-operation with the Editor in the production of this work; and that a large amount of energy and industry is continually exerted to render it, as far as possible, useful.

Its extensive circulation is, therefore, the result of a large expenditure of capital—which has been continually increased, year after year, so as to augment the value of the Journal, and secure its hold on public favour: its Proprietors and Conductors being fully impressed with the important fact, that there is more difficulty in upholding than in obtaining popularity for any publication.

The ART-JOURNAL consequently continues to be the only Journal in Europe, or in America, by which the Arts are adequately represented.

It is addressed—first to the ARTIST, next to the AMATEUR and STUDENT, next to the MANUFACTURERS and ARTIST, and next to the GENERAL PUBLIC; endeavouring to interest all by the varied nature of its contents, but striving also regularly, to issue matters specially directed to each class.

Since its original establishment, so far back as the year 1830, the position and condition of the Arts in Great Britain have undergone large and beneficial changes: the higher Arts now receiving large patronage, while, twenty years ago, few Painters or Sculptors were "commissioned," and it was a rare event to find ten per cent. of the pictures of members of the Royal Academy "sold" at their Annual Exhibitions. Manufacturers, with a few honourable exceptions, hardly made pretence of reference to Art for instruction; content with the chances that occasionally procured good results, and satisfied, for the most part, to follow in the steps of predecessors, without inquiry and without advance.

Various circumstances have combined to produce the gratifying and beneficial improvements of which the present epoch supplies abundant evidence: it cannot be presumptuous to state that the ART-JOURNAL has contributed largely to that progress on which the country—and, indeed, civilisation, may be congratulated.

Our Subscribers and the Public may rest assured that in no degree will the efforts of the Conductors of this Journal be relaxed. The Editor, and his many valued coadjutors, will continue to labour, with heart and energy, to render it in all respects commensurate with the growing intelligence of the age; to supply information upon every subject interesting to the Artist, the Amateur, the Manufacturer, and the Artisan; making it not only a record of all "news" concerning the Arts and their various ramifications,—a reporter of every incident it may be

desirable to communicate,—but, by drawing on the resources of experienced and enlightened men, affording such information and instruction as may advance the great cause of Art—teaching, while gratifying, its professors and those who pursue Art as a source of pleasure and enjoyment.

The ART-JOURNAL for the year 1861 will, therefore, be commenced with an earnest resolve to improve it by every available means, and with all the advantages that result from long experience of the wants and wishes of its Subscribers, as well as with a grateful sense of the support by which it has obtained the high position it occupies.

Although it may not be necessary to explain, generally, the arrangements in progress for conducting the ART-JOURNAL during the year 1861, we are free to announce the following as some of the subjects that will be contained in the January (or early) Number:—

I.—AN INQUIRY CONCERNING THE EARLY PORTRAITS OF OUR LORD. By THOMAS HEADLY.

The artist has made several journeys to Rome for the special purpose of this "Inquiry;" has had access to collections and documents hitherto inaccessible; has been aided in his task by the Cardinal-Minister; and has been permitted to make drawings from objects heretofore scrupulously withheld from the public eye. His papers, therefore, will be largely illustrated.

II.—RUBBINGS OF AN ARCHÆOLOGIST AMONG OLD BOOKS AND IN OLD PLACES. By F. W. FAIRBOLT, F.S.A. Illustrated.

III.—ARTISTS AND THEIR MODELS. By G. W. THORNBURY.

IV.—THE HERMITS AND RECLUSES. By the Rev. EDWARD L. CUTTS, B.A. Illustrated.

V.—FRENCH AND ENGLISH PAPER-STAINING. By JOHN STEWART.

VI.—A TOUR THROUGH ALL ENGLAND. By THOMAS FURNELL.

VII.—MODERN ART IN FLORENCE. By THEODORA TROLLOPE.

VIII.—THE BRONZE PENNY.

IX.—DRINKING FOUNTAINS. Illustrated.

The following Series will be continued.

THE HUDSON, FROM THE WILDERNESS TO THE SEA. By BENSON J. LOSSING. Illustrated.

BRITISH ARTISTS: THEIR STYLE AND CHARACTER. By JAMES DAPFONE. Illustrated.

ROME AND HER WORKS OF ART. Illustrated.

VISITS TO ART-MANUFACTORIES. By ROBERT HUNT, F.R.S., &c. Illustrated.

During the year 1861, the Series of Engravings from Pictures in the Royal Collections (and for the permission to engrave which we were so greatly indebted to the gracious munificence of Her Majesty the QUEEN and His Royal Highness the PRINCE CONSORT) will be brought to a close and will be succeeded by a Series of

SELECTED PICTURES

FROM THE PRIVATE GALLERIES AND COLLECTIONS OF GREAT BRITAIN.

This project has been liberally and considerably aided by Collectors. Our selections have been made—We trust with sound judgment—from the most extensive collections in the Kingdom; and we are so arranging as to obtain the co-operation of the best Engravers, and of those only.

LONDON: JAMES S. VIRTUE, CITY ROAD & IVY LANE.

SMITH, ELDER, & CO., 65, CORNHILL.

THE NATIONAL MAGAZINE;

ONE OF THE MOST POPULAR AND HIGHLY-ILLUSTRATED PERIODICALS OF THE DAY,
IS PUBLISHED ON THE FIRST OF EACH MONTH, PRICE ONE SHILLING.
The Half-Yearly Volume, handsomely Bound, Gilt, price 7s. 6d., is Now ready.

OPINIONS OF THE PRESS.

"On the whole, we consider it (the 'National') one of the best of our popular magazines. It bears generally, but powerfully, against the many evils that infect our age, such as indolence in literature, cant in religion, and anarchy in society. It only requires to be generally known to be generally valued."
—*Manchester Guardian*.
"The 'National Magazine' gives evidence of the vigour and taste of the new arrangement." —*Daily Telegraph*.
"The 'National Magazine' contains some excellent papers, and is evidently improving under the editorship of Mr. Edin." —*Bell's Weekly Messenger*.
"It is understood that the proprietorship and management of this magazine have been changed, and that the responsibility of both have been combined in a gentleman well known in literary circles as an acute observer, an accurate and perceptive critic, and a writer possessing singular aptitude for fitting to what he has seen in the present and most faithful manner. These are just the qualities for the conductor of a periodical, and if we had not been informed of the fact, we think we should have seen in the issue of the late number of the 'National Magazine' itself strong traces of a new and vigorous hand. Impulse has been given to the literary department; and, while illustration is still a characteristic, the letter-press is more predominant than hitherto. As there are gifts and substance in the articles, we

are not disposed to complain of this partial change; and it is more to be regretted that quantity, quality, and variety are judiciously and satisfactorily combined in the current number." —*Illustrated London News*.

"We congratulate the new editor of this popular miscellany on the evidence of the first number which has appeared under his conduct. There is a possibility of some, a versatility of talent, and a infusion of moral sentiment pervading every page which we cannot but approve. The articles are light, without being frivolous; or, if not light, are earnest, without being dull. The fiction is of a superior order to that which pertains to literature of this class, and, altogether, we have set our eyes on a more thoroughly entertaining magazine than the 'National' for a long time." —*Standard*.
"The 'National Magazine' for January is a great improvement upon its immediate predecessors, both in the style of its engravings and the quality of its letterpress. Mr. Nichol has done much for it." —*Standard*.

"We thoroughly like the plan of this periodical, and the general character of the contributions, and are persuaded that it has only to be introduced to secure for itself a repeated welcome to thousands of householders." —*The Dial*.
"This admirable periodical." —*Murray Chronicle*.
"This most agreeable periodical." —*London Review*.

London: W. KENT & CO.

Now ready, price One Shilling, with Illustrations by GEORGE CRITCHBAKE, M'CONKELL, and JOHNSON;

THE OYSTER;

WHERE, HOW, AND WHEN TO FIND, BREED, COOK, AND EAT IT.

THE IMPERIAL ATLAS

OF

MODERN GEOGRAPHY;

A Series of One Hundred carefully Coloured Maps, embracing the most Recent Discoveries, and the Latest Divisions of Territory in all parts of the World.

COMPILED FROM THE MOST AUTHENTIC SOURCES.

Under the Supervision of W. G. BLACKIE, F.R.D., F.R.G.S., Editor of the "Imperial Gazetteer."

WITH AN INDEX OF NEARLY 120,000 NAMES, THE MOST COPIOUS EVER PUBLISHED.

"After a careful perusal of the whole Work, we can safely say that we know of no Atlas published at the same low price, which is so copious and accurate in detail, so clearly printed, and so well engraved; that no Maps have been hitherto constructed on scales so carefully adapted to the relative importance of countries as viewed from the stand point of English merchants and general readers; and, in conclusion, that the Index attached to the engraved sheets is the most copious and perfect which has yet been compiled."—*London Review*.

"A highly satisfactory publication, sufficiently extensive for all ordinary purposes, without being inconveniently large and expensive, based upon trustworthy data supplied by Government surveys and other official documents, together with the accounts of navigators and travellers, and the whole executed under careful superintendence by thoroughly competent hands. . . . The Maps are everything that could be desired, so far as accuracy, distinctness, neatness, and fulness of detail are concerned."—*Athenaeum*.

Two Vols. imp. 8vo. 2,670 pages, £4. 6s.

THE IMPERIAL GAZETTEER:

A GENERAL DICTIONARY OF GEOGRAPHY,

Physical, Political, Statistical, and Descriptive. Edited by W. G. BLACKIE, F.R.D., F.R.G.S. With nearly 750 Illustrations, comprising Views, Costumes, Maps, Plans, &c.

"The information is brought down to the very eye of publication. . . . All who are desirous of purchasing a Geographical Dictionary, at once copious and exact in its information, cannot do better than provide themselves with this."—*Athenaeum*.

Two Vols. imp. 8vo. 3,000 pages, including the Supplement, £4. 17s. 6d.

THE IMPERIAL DICTIONARY,

ENGLISH, TECHNOLOGICAL, AND SCIENTIFIC:

With a Supplement containing an extensive collection of words, terms, and phrases, not included in previous English Dictionaries. By JOHN OGILVIE, LL.D. Illustrated by above 2,500 Engravings on Wood.

"Dr. Ogilvie has not only produced the best English Dictionary that exists, but, so far as the actual state of knowledge permitted, has made most approach towards perfection. We scarcely need say that the work has no successful competitor."—*British Quarterly Review*.

In four vols., three of which are now ready, price 30s. each.

THE COMPREHENSIVE

HISTORY OF ENGLAND,

CIVIL AND MILITARY, RELIGIOUS, INTELLECTUAL, AND SOCIAL.

From the Earliest Period to the Suppression of the Sepoy Revolt. By CHARLES MACFARLANE and the Rev. THOMAS THOMSON. Illustrated by above Eleven Hundred Engravings on Wood and Steel, comprising Antiquities, Manners and Customs, Views, Costumes, Portraits, Maps, Plans, &c.

"[Vol. I., completing the Work, will be published shortly.]
"We have been throughout the perusal charmed by the easy elegance of the style—the very acme of historical narrative. This ought emphatically to be entitled the 'Family History of England.'"—*Morning Herald*.
"We regard this publication as by far the most beautiful, cheap, and really 'comprehensive' history of the nation which has ever yet appeared."—*John Bull*.

Vol. I. now ready; to be completed in three vols., 30s. each.

A COMPREHENSIVE

HISTORY OF INDIA,

CIVIL, MILITARY, AND SOCIAL.

From the First Landing of the English to the Suppression of the Sepoy Revolt; including an Outline of the early History of Hindoostan. By HENRY BEVERIDGE, Esq., Advocate. Illustrated by above Five Hundred Engravings on Wood and Steel, comprising Antiquities, Views, Costumes, Portraits, Maps, Plans, &c.

"The accuracy and finish of the maps and engravings, the beauty of the paper and type, and the great care with which manifestly all the records of our Indian conquests have been searched, render this a most valuable addition to the history of our colonial empire."—*John Bull*.
"The history of India has all the fascination of a romance; and the concise and elegant style in which it is here presented must render it universally attractive."—*Trees of the Country*.

In two large vols. super-royal 8vo. 2,250 pages, cloth, £2. 15s.

A CYCLOPEDIA OF AGRICULTURE,

PRACTICAL AND SCIENTIFIC;

In which the Theory, the Art, and the Business of Farming, in all their Departments, are thoroughly and practically treated. By upwards of Fifty of the most Eminent Farmers, Land-Agents, and Scientific Men of the day. Edited by JOHN C. MORTON, Editor of the *Agricultural Gazette*. With above 1,800 Illustrative Figures on Wood and Steel.

"A most comprehensive work on British Agriculture, and one emitting to completely the practical and scientific knowledge of our best agriculturists, has never before appeared."—*Reverend*.

THE GARDENER'S ASSISTANT,

PRACTICAL AND SCIENTIFIC: A Guide to the Formation and Management of the Kitchen, Fruit, and Flower Garden, and the Cultivation and Management of Conservatory, Green-house, and Hot-house plants. With a Copious Calendar of Gardening Operations. By ROBERT TUCKER, Superintendent of the Horticultural Society's Gardens, Chiswick. Illustrated with Twelve beautifully Coloured Engravings, and nearly 300 Engravings on Wood. Super-royal 8vo. cloth, 2s. 6d.

"A most thorough and practical work on gardening, useful alike to the gentleman amateur and the practical gardener."—*Reverend*.

FARM INSECTS. Being the Natural

History and Economy of the Insects injurious to the Field Crops in Great Britain and Ireland, and also those which infest Barren and Unimproved; with Suggestions for their Destruction. By JOHN CURRIE, F.R.S., &c. Illustrated with nearly Hundred Figures, Plain and Coloured. Super-royal 8vo. cloth, 2s.

"Farm Insects" is not only instructive as an entomological inquiry, but is singularly practical as an agricultural guide. No farmer of any rank or importance ought to be without it; and therefore of any mark or importance ought to be without it; and therefore of any mark or importance ought to be without it; and therefore of any mark or importance ought to be without it."—*Reverend*.

OUR FARM CROPS. Being a Popular

Scientific Description of the Cultivation, Chemistry, Diseases, and Remedies, &c., of our different Crops, worked up to the high Farming of the present day. By JOHN WILSON, F.R.S., Professor of Agriculture in the University of Edinburgh. Illustrated with Engravings on wood. In 2 vols. crown 8vo. cloth, 15s.; or 12 parts, 1s. each.

"This work is probably the most remarkable, and the most useful for the Agriculturist, that has appeared for a long time."—*Glasgow Official Gazette*.

"It is, in fact, in every respect a perfect farmer's book."—*Reverend*.

BARNES. NOTES ON THE NEW

TESTAMENT. Illustrated and Annotated Edition. With 20 Steel Plates, 28 Maps and Plans, and 8 Engravings on Wood—in all, Severely separate Plates, in 6 vols. post 8vo. 5s. 6d.

BARNES. NOTES ON THE OLD

TESTAMENT. Uniform with the New Testament, and with numerous Illustrations. Vol. 1, 10s. 6d.; Vol. 2, 10s. 6d.; Vol. 3, 10s. 6d.

NOTES OF A CLERICAL FURLOUGH,

Spent chiefly in the Holy Land, with a Sketch of the Yarnage out in the yacht *St. Ursula*. By the Rev. ROBERT BUCHANAN, D.D. Illustrated with Maps and Plans. Square 8vo. cloth, 7s. 6d.

"Every reader of the Bible, and especially every expounder of the Scriptures; most interesting commentary, and an invaluable help."—*Patriot*.

THE BOOK OF ECCLIASTASTES:

In Manning and in Lesson. By the Rev. ROBERT BUCHANAN, D.D. Square 8vo. cloth, 7s. 6d.

"For learned as well as unlearned readers, the most serviceable collection yet made of our language, for making them intelligently to read the unlearned, and rightly to profit by the lessons of *Eccliaestastes*."—*British Critic*.

LADIES OF THE REFORMATION.

ENGLAND, SCOTLAND, AND THE NETHERLANDS. Memoirs of Distinguished Female Characters belonging to the Period of the Reformation. By the Rev. J. A. W. REYNOLDS. Numerous fine Engravings. Small 8vo. cloth, 10s. 6d.; morocco extra, antique.

LADIES OF THE REFORMATION.

GERMANY, FRANCE, SWITZERLAND, ITALY, AND SPAIN. Memoirs of Distinguished Female Characters belonging to the Period of the Reformation. By the Rev. J. A. W. REYNOLDS. Numerous fine Engravings. Small 8vo. cloth, 10s. 6d.; morocco extra, antique.

LADIES OF THE COVENANT;

Being Memoirs of Distinguished Scottish Female Characters, embracing the period of the Covenants and Persecution. By the Rev. J. A. W. REYNOLDS. Numerous Engravings. Cloth 8vo. 7s. 6d.

London: BLACKIE & SON, 11, Warwick Square, City; Glasgow and Edinburgh; and all Booksellers.

LONDON:—Printed by WILLIAM LITTLE, at the Printing Office of COT & WATKIN, 74 & 75, Great Queen-street, Lincoln's-Inn-Fields, in the County of Middlesex; and published by the Wm. & LITTLE, at No. 11, Southampton-street, Strand, in the same County.—BARTHOLOMEW, DECEMBER 22, 1860.

THE LONDON REVIEW

AND WEEKLY JOURNAL

Of Politics, Literature, Art, & Society.

CONDUCTED BY CHARLES MACKAY.

No. 26.]

SATURDAY, DECEMBER 29, 1860.

[Price 3d.]

EIGHTEEN HUNDRED AND SIXTY.

WHEN a great man dies, it is the custom in some countries for a brother in greatness to pronounce a funeral oration over his grave. In this country the eulogium of the mighty dead is uttered to a larger audience, by a greater power than spoken oratory. The pen of the ready writer discourses the eloquence, and the public journals print and disseminate it over the land, carrying to remotest corners the history of the departed, with the befitting tribute of the gratitude and admiration of his contemporaries. The name of the dead worthy takes its place thenceforth on the roll of Fame, that posterity may be able to find and use it for the emulation of the living. And the function which the press thus performs towards individuals, it performs towards TIME itself. Every man who dies is not worthy of its tribute; but every year that takes its place in the long dim roll of departed ages, becomes an *ANNUS MIRABILIS* as soon as it has ceased to be. The lot of this generation has been cast in so stirring an epoch that every successive year seems, while it lasts, as if it were more eventful than its predecessor. The minds of men engaged in the great vortex of circumstance, either as busy actors or as philosophic spectators, exaggerate the Present at the expense of the Past. Their perceptions are dulled by remoteness, but are acute and vivid to the things that are near. And thus it follows that in pronouncing the funeral oration of 1860, public writers will inevitably attach more importance to it than it will be found to have deserved, when the same pens, or others, shall perform the same duty for the year that is to follow. The years are but links in a mighty chain, and no one link is much greater or stronger than another if seen from the right point of view. The chain of the years in our time is a chain of Revolutions. An old Civilization is breaking up to give place to a new; and Governments that are founded upon a state of society that knew not liberty of conscience or of trade, or printing-presses, or railroads, or steam-ships, or electric telegraphs, or any other of the marvellous and democratic discoveries of modern science, all of which are incompatible with arbitrary and oppressive rule, are making the last desperate struggle for existence. In this struggle they are doomed to succumb, although the struggle may be protracted for generations, and the world be apparently thrown back to semi-barbarism ere the final victory be achieved.

So slow is the progress of liberty in Europe, as measured by the lifetime of individuals, that on looking back twelve years we find that the words spoken of the revolutionary year 1848, are equally suitable to the memorable year that is now within two days of its close. It was said in 1848, that men's minds, bewildered amid the whirl, might not be able to form very clear notions of the scope and tendency of the various revolutions which every day brought forth; but that they could see and understand distinctly that the world was marching in a right direction. In that year it was declared that "the timid feared, that the partisans of the old system despaired, but that the wise and the good hoped; and endeavoured to pierce through the gloom that enveloped the present, to behold the glory of a brighter future." May not the very same words be applied to 1860? Is there not the same apparent onward march? the same hopes and fears? the same heaving of Europe in the throes of a long-winded and fast-approaching change?

In fact, it would seem, despite of all the wars and reactions which have taken place in the interval, that the European world has gone

back again to its last great starting point, and that it stands in something like the same position which it occupied when France, in 1848, took its revenge for 1815. It seems as if but one wave had broken upon the shore, and that nothing but another wave of equal impetus was rushing into its place, leaving the landscape and the sea-view the same as before. It was then said:—

"The world cannot always be in the pangs of change. If great ideas ferment as they do now, they must ferment to some end. What is that end? The parcelment of Europe, made by Castlereagh, Metternich, and the rest, in 1815, has been broken up, in spite of solemnly attested parchments, and in the teeth of the standing armies of the despotic powers. The treaty of Vienna is defunct. The several European States have to settle among themselves their mutual relations. Small States show a tendency to aggregation; large States to segregation. The petty principalities and powers of Germany, strong in the identity of speech, literature, and ideas, yearn towards each other. The Teutonic race wishes for unity; the Slavonic raises its voice and insists upon independence. Hungary demands to be Italy, full of generous thought, insists upon being self-ruled; and whatever may be the form of Government which all or any of them may adopt, whether a monarchy hereditary or elective, or pure republicanism, untiers not;—they demand a free existence; and they will obtain it."

There is not a sentence in this description which might not have been written to-day, so accurately does it define the existing condition of Continental Europe. Twelve or twenty years hence the same words may be equally appropriate; but, ultimately, and at the duly-appointed time, there will, we cannot doubt, be such a regeneration of States among themselves, and such a re-adjustment of the European system as will prevent the continental governments from being anachronisms as well as despotisms, and inaugurate a new and better era for our hemisphere. It may be long to wait, and living men may not behold the consummation; but it requires no gift of prophecy to be able to predict its certainty, if not its speediness.

But considering this fast expiring year on its own merits, and not merely as a small link in the chain of destiny, it must be confessed that both for us and for our neighbours it has been one of no ordinary importance. It was in this year that the barriers of estrangement, if not of jealousy and ill-will, caused by stupid and illiberal prohibitions or restrictions upon commerce, were first broken down between Great Britain and France; and when the first great step was taken to encourage, for mutual benefit, that free and cordial intercourse between them, which will in future render war impracticable and perhaps impossible. A steady alliance between the two nations, not founded upon individual caprice or the ulterior policy of a moment on either side, but upon a rapidly increasing and ramifying commerce, and upon the mutual respect which will grow out of better knowledge and more intimate communication, is not only the best thing that can happen to France and to Great Britain individually and conjointly, but the best thing that can happen to the whole civilized world. While these two are united by interest as well as reason, war in Europe can only take place by their permission; and readiness for war has been, is, and will be so costly, if not so ruinous, to both of them, that necessity and policy, if no higher motives exist, will alike compel them to act as mediators in every dispute that may threaten to embroil the European commonwealth.

And fortunately, although these Great Powers have been allied this year, as they were in 1854 and 1855 in a warlike enterprise at a

remote part of the world, the year has not been allowed to go down upon their wrath. They have invaded together a civilization far older than their own; and have, by force of arms, taught the Chinese Government, that in this age of the world no state or empire can be permitted to shut itself up in isolation and refuse to perform the duties of good fellowship and good neighbourship to other members of the great family of mankind. The short, sharp, and, as we hope, decisive war, which they have waged against the treacherous and cowardly Government of China, has been brought to a close amid the unfeigned rejoicing of Christendom; and if the stipulations of the Peace concluded in the conquered and hitherto invulnerable city of Peking be kept in good faith by the Chinese, the conquered will derive far more benefit than the conquerors. Asia will be brought into the healthy circle of European ideas, and will participate in the kindly growth of European progress. The Chinese mind, no longer a stunted shrub, shut out from light and air, will put forth leaves and fruit, and ultimately expand into far goodlier proportions than it has ever experienced in the stagnant fens of its ancient traditions.

If the events of the year shall really lead to the establishment of thoroughly free intercourse between China and the states of Europe and America, it will deserve to all future time the title of "memorable," and stand as broadly and distinctly in the great calendar of history as those other remarkable years from which men are content to date the growth of new ideas, and to reckon the progress of civilization.

As regards the rest of Europe, Italy deserves the first place. Were it for nothing else than the spectacle which that country has exhibited under the prompting of the daring genius of Garibaldi, EIGHTEEN HUNDRED AND SIXTY might claim no slight distinction in the annals of the world. The dream of ages has been all but realized by the exertions of one man, strong in the strength of all his countrymen, and permeated with the spirit and the aspirations of thousands of nameless patriots, who have lived, and hoped, and died without a glimpse of the glory they imagined, and which he achieved. Whatever may be the future of Italy, whether the Pope shall remain its incubus as heretofore, whether its dispossessed and dethroned Dukes and Sovereigns shall be restored to misgovernment, or whether Austria, herself in the pangs of dissolution, shall retain for any length of time her hold upon its north-eastern angle, the events of the closing year, themselves the fruit of 1848 and of the years preceding, will be fruitful in their turn. Italy never has been free and united. Perhaps it never will be so, though Cavour may scheme and Garibaldi may act to that end. But whatever form or forms it may hereafter assume, a shaking has been administered to it, which will infallibly prevent its relapse into the chaotic darkness wherein all its foes, and some of its pretended friends, would like to see it enveloped.

The old warning cry of "TOO LATE," which sealed the downfall of the dynasty of Orleans on the day of the abdication of King Louis Philippe, has been raised in the closing year with all its ancient effect. It was rung in the ears of the Dukes and Grand-Dukes of Italy, and sent them into hopeless exile for not knowing how to yield to reason, in the days of their prosperity, the just demands of their people. It was rung in the ears of Francis II. of Naples, when offering, in terror of the approach of Garibaldi, the reforms which he contemptuously denied when no Garibaldi, and no other avenger of blood was dreamed of. And it is at this moment ringing, loud and clear, from the plains of Hungary in the ears of the Emperor of Austria, bidding him look well to the safety of the crown of St. Stephen, and to the fairest portion of his cruelly misgoverned dominions. And if the "TOO LATE" that has proved fatal to so many small sovereigns during the year, do not prove equally fatal to the greater potentate who rules in Vienna, the result will be due to other agencies than his own, and to a wisdom among his councillors of which he himself has never yet exhibited a scintilla.

And while the disintegration of once powerful states and kingdoms is threatened in the Old World, in the instances of Austria and Turkey, a similar disintegration threatens in the New the youngest member of the great family of nations. Old empires have no worse disease in the body politic than the disease of slavery which the United States inherited from Europe and Asia. There is a drop of bitterness in every human cup, and the United States, with all their juve-

nile vigour and hopefulness, have to taste of it, as well as other kingdoms and empires, that have gone before them. But if there be more wisdom in an ultra-democracy, than in any other form of government, as the Americans are in the habit of boasting, such wisdom will be best shown in making the best of the bitterness, and in the preservation of the Union. The events of 1860 have given the Federation a severer shock than it has ever yet experienced; and proved, even to the Americans themselves, that Republics, governed by the will of the people, are just as liable to go wrong as monarchies and despotisms.

And looking round upon the general condition of the civilized world, it must be confessed that the people of Great Britain have abundant cause for thankfulness in the happy position which they occupy. Always complaining of the defects of their Government, but always mending them without social convulsion; working and prospering; free to speak, to write, and to print; yielding implicit obedience to the laws which they and their fathers have framed, and which the Sovereign obeys as cheerfully and as strictly as the humblest citizen; they may see many evils around them, which they desire to remedy; but they have the consolation of knowing that none of them are of such magnitude or violence as to imperil the safety of the State in the attempt to remove them. The wheels of the political machine move smoothly; and the progress of the nation, if not extraordinarily rapid, is real and satisfactory. Our young men, who armed themselves at the whisper of a danger that has passed away, continue armed because they enjoy the exercise and the amusement of drill and rifle practice; and because they know that among nations as among individuals, the strong, self-reliant man is the least likely to be molested.

Though we know what the Old Year has been, none of us can safely speculate upon the fortunes of the New. But all of us can indulge in the hope that, for ourselves, our families, our kindred, our country, and the world, it may be happier than its predecessor. And with the cordial expression of this hope, we conclude our sketch of the lights and shades, the glories and the glooms, of 1860.

WHY AUSTRIA WILL NOT SELL VENETIA.

THE fate of Europe, in the present critical juncture of foreign politics, may be said to hang upon the fate of Venice. It is seldom that we find ourselves thus able to resolve to a single issue the questions which involve the destinies of a continent. Yet, when we consider the interests that now depend upon the policy of Austria with reference to that portion of her Italian possessions still remaining to her, and the various countries which will be either directly or indirectly affected by the views of her statesmen upon this subject, we do not think that we hazard too much in the statement. Venice is the knot of the situation, whether all Europe will be in a blaze in the spring of the year which is about to open, or whether we may look forward to a decade of comparative tranquillity, it rests with Austria to decide. If this be the case, and it is not very difficult to show that it is so, there can assuredly be no more important subject of speculation than her intentions with regard to this province. Those who know her well have little doubt about them. Unfortunately there are many in this country who have not watched the traditional policy of the empire, and are not sufficiently familiar with the sentiments of her leading statesmen upon the subject, to believe that they never have wavered, and never will upon this vital point. We are too apt to regard questions of this nature from our own point of view; and because Englishmen think they see clearly that the sale of Venetia would ensure the peace of Europe, they forget that Austrians may not be equally convinced that the best interests of their country would be served by the same act.

Whatever may be our own opinions on the subject, and we are not disposed to dissent from the popular feeling in favour of a diplomatic transfer of Venice for "a consideration," it is only fair to weigh the arguments by which those who are opposed to such a transfer, support their case. The Austrian Government maintains that, as the largest state of the German Confederation, she is the guardian not only of her own interests, but of those of Germany, and she is urged to stand by this principle by all those minor states which have been accustomed to consider the empire as their most powerful protector. However general the feeling may be in England in favour of the sale of Venice, it is impossible not to admit that in Germany the largest proportion of public opinion is strongly opposed to such a sale. Not only are Bavaria, Wurtemberg, and Saxony, united in this view of the case, but a strong political section in Prussia and the neighbouring states, who may feel no sympathy with Austria in her internal system of government, believe that in a strategical sense the safety of Germany would be endangered by the abandonment of the Quadrilateral. They

contented that it would be impossible to substitute, by any line of fortifications on the Tagliamento or in the Tyrol, a military frontier which should protect satisfactorily the southern flank of Germany.

They do not look forward to the formation of a united Italy strong enough to resist external influence with the sanguine faith of the British sympathizer, but anticipate with dread the day when the whole peninsula dominated by France, and lying defenceless at the foot of the Alps shall be little more than a French province. They point to the passes recently ceded to Louis Napoleon in Savoy and Nice, and which afford free ingress to his legions into Italy; they refer you to the subservience of the Piedmontese cabinet to French pressure hitherto, and they lay stress upon the internal discussions already manifesting themselves in the antagonism of the republican and monarchist principles and on the reactionary movements in the southern part of Italy. These elements of discord they maintain may be made available by an ambitious and powerful neighbour for its own purposes; and they hold that the result of French interference under such favourable circumstances would be to destroy that independence which can alone exist when a country can rely on the stability of its institutions, and the political union of its population. They consider then that the sale of the quadrilateral would have practically the effect of leaving the passes of the Tyrol open to the armies of France, as entirely as the passes of Savoy are at the present moment, while it is evident that the way would be clear into Croatia, Dalmatia, and the western provinces of Turkey.

We do not mean to maintain that this view is the correct one; we are only accounting for the fact of the preponderating feeling even throughout the most liberal part of Germany being against the sale of Venetia, and for the obstinacy of the Austrian Government in maintaining that her honour is involved in adhering to this possession, not only because it has been guaranteed to her by treaty, but because she is under certain engagements to the rest of Germany, which she considers it would be cowardly to abandon, did she yield to the pressure that has recently been applied to induce her to compromise this important question. In return for her pledge to stand by Venice to the last, she has received the no less solemn promise from Prussia and the rest of Germany, of co-operation in the event of France interfering in favour of Italy, should that power declare war. It will be seen, from a consideration of these facts, how small the chances are of the Cabinet at Vienna deserting Germany, sacrificing their cherished policy of dogged pertinacity, and consenting to an act by which they would not only forfeit the position now held by Austria in the Confederation, but, in their view, cover that empire with disgrace. On the other hand, by adhering to their resolution to defend the Quadrilateral, they are playing a game on which the very existence of the empire itself is staked, and which must involve, as players, most of the great European Powers. Nothing can justify such a policy except the certainty of success. We confess we do not share the sanguine view of Austrian statesmen, still less of Austrian generals.

The declaration of war between Italy and Austria, which, in spite of the opposition of the cabinet at Turin, will be forced upon the Piedmontese Government by the national party in spring, will be the signal for a rising in Hungary, for we must not delude ourselves into supposing that the recent concessions will have the effect of retarding this movement. One of its consequences will be a defection from the Austrian ranks of upwards of 100,000 Hungarian soldiers. Croatia, with its 80,000 disaffected frontier militia, or Grenzers as they are called, will rise in rear of Venice, and Austria will be in a blaze from the Minio to the Carpathians. We may assume, from the note of preparation recently sounded by the French Emperor, who has added a fourth battalion to every regiment, put an extra force of 11,000 men into his dockyards, and ordered all the "craque renouable" men to hold themselves in readiness, that he proposes to depart from the policy of non-interference, which will involve Prussia in the struggle, and draw the French army to the Rhine.

The sides, in the first instance, will then, in all probability, be France, Italy, Hungary, and some of the other nationalities, against Austria and Prussia. Later we may anticipate Russian interference, a rising in the Slavonic Provinces of Turkey, and the agitation of the Eastern question generally. How this imbroglio may ultimately clear itself, it is beyond the foresight of the wisest statesman to predict; but we think we have said enough to show "why Austria will not sell Venetia," and why, in our opinion, it would be much better if she did.

THE SECESSION MOVEMENT IN THE UNITED STATES.

THERE is no question but the State of South Carolina and her confederates have taken strong and decisive action against the Republican North. Her population are unanimous in the desire for secession, and the four other States are nearly as ardent seceders. The legislatures both of South Carolina and Georgia have already declared for secession; and the States of Alabama, Mississippi, Florida, and Texas, have joined in the movement. Virginia is also excited, but her movements are comparatively cautious.

South Carolina and her four seceding sisters have, it appears, resolved to send an envoy to the Emperor of the French to solicit the recognition of their independence, and offering his Majesty of France, as an equivalent, two free ports of entry—Charleston and Mobile. The instructions to this agent are published, and are rather amusing than commendable. The draft of the general Declaration of Independence is also printed, but has, as yet, had no formal proclamation. When the formal declaration is made, then—what? The constitutional lawyers say, there can be no secessions without the consent of the Federal Government. But how, if the seceders are wifid! Will there be any attempt at coercion? Will the north venture upon armed force? At all events there is preparation to meet it if attempted. The banks in Charleston have volunteered to take one-fourth of a loan for arming the State; and the neighbouring States have made offers of men and equipments in case of emergency.

The Georgian legislature has passed bills calling a convention, and appropriating a million dollars to arm the State for resistance, should the Federal government attempt an armed subjugation. The representatives from the South are expected either to resign their seats, or to absent themselves from Congress. Agents have been appointed for the purchase of munitions of war. Eighteen hundred rifles, and forty thousand cartridges with conical balls have been shipped for Georgia; and one thousand carbines have been sent to Alabama. It is said that a New York firm has ordered for five thousand muskets, and that another establishment has supplied a large number of Colt's revolvers. What will be the upshot of the quarrel remains to be seen; most certain it is that the excitement is at this early day not without its consequences; and, however indifferent the North may choose to appear, the central government regards the movement with anxiety.

The fifteen Southern States have a common interest and a white population exceeding nine millions, which, whether right or wrong, believe in the irreconcilable antagonism of Northern and Southern interests, and whom a very slight provocation, in their present temper, might drive to serious extremes. This is well understood, and has already had its effect in Wall-street. The brokers know, moreover, that the high prices of cotton and gold crops, for some years, has induced among a class, at no time over-provident, an expenditure which even good years could not long maintain; and that partial failure of this year's crop in the Gulf States from drought are, without the qualifying effect of great providence, the precise elements of a Southern crisis. It is argued that civil troubles will be accompanied by repudiation; and hence not only are Southern securities avoided, but the reason is also found why the Chicago banks have concluded to refuse the notes of some six or eight banks whose stability rests on their connection with the Southern States. The whole affair is one of great embarrassment, as well commercially as politically. What will be the result time alone can tell. The peculiar institution is simply causing one of the many reasons to which the body politic will from time to time be subject until the curse is fairly eradicated.

RAGGED SCHOOLS AND GOVERNMENT GRANTS.

A SHORT time ago there was a large and influential meeting in Edinburgh, to assert the claims of ragged and industrial schools to public benevolence. The principal topic enlarged on was the duty of the State to assist the funds of such schools, if only to save the future expense of providing the more costly discipline of prisons. In this connection it was deplored that Sir John Pakington's motion to that effect during the last session of Parliament had been lost; and this being attributed to the lateness of the period at which it was introduced, there was great confidence expressed that a similar resolution, earlier propounded next year, would be more successful. It was plainly expressed, that the Privy Council officials ought not to be allowed to do just as they think proper with the educational grants; but should be made to feel that they are servants, not masters, in this administration.

It is doubtless true that the feeling in favour of supporting schools of the class in question is rapidly increasing throughout the country; and it is undeniable that the Government ought to be guided in the distribution of public money by the feeling of the country, as expressed through Parliament. But if the Privy Council officials thought proper to tell their own difficulties somewhat more fully and explicitly than Mr. Lowe did last session, in answer to Sir John Pakington, they would convince any candid assembly that it is better not to entangle themselves further in this course of aiding private benevolence, unless there is provided a machinery to prevent its abuse. Their present plan is to assist schools of a certain quality for a certain class of children. They have inspectors, each of whom traverses an extensive district to look after the quality of the schooling; but they have no adequate means of securing this schooling to that class of children which they chiefly desire to benefit. Though they have multiplied their forms of inquiry and guarantee till the process of forming a connection with them has become tedious and vexatious almost beyond endurance, yet it has been found impossible

to confine their assistance to its proper objects. Some years ago, after a keenly contested parliamentary election in a town where party politics were wont to run high, the successful candidate redeemed the promise of his canvass by procuring several hundred pounds from the Privy Council to assist in building an academy for young gentlemen—perhaps we should rather say for the sons of the electors, from the gentry downwards—but we use the words of the prospectus in designating them generally as “young gentlemen.” The inspector was afterwards made aware of the evasions that had been used; and, according to our information, he visited the spot, and reported all; but his statement was never published. It was not without reason that there was an agitation some time ago against garbling the inspectors’ reports. Perhaps the present system of distributing the parliamentary grants would not have been continued so long if the public had distinctly understood all the abuses which the officials have striven, we believe conscientiously, but not always successfully, to prevent.

A glance at the history of educational benevolence in this country may convince us that this covetousness, which clings to the rich what was designed for the poor, has been at work for ages, and is extremely difficult to control. In days when there were no printed books, and few manuscripts exist, almost all the education of the country was centred in the Universities of Oxford and Cambridge. As very little preparation was or could be demanded, the pupils were mere boys, often taking their first degree before they entered their teens. They were for the most part poor boys, too, in the ordinary sense, that is, drawn from the lower classes of society; for learning was little in request among the higher. In those days the richer benefices of the Church were bestowed according to favour on the learned or unlearned, as it happened, while the places of the working clergy, which were those that required education, conferred neither the income nor the *status* of a gentleman. At first the boys lodged as they could afford with the townspeople, who were under no restrictions as to the prices both of rooms and provisions; but charity by-and-by stepped in to provide houses and board for the poorer lads, with masters to keep them in order, while other establishments were organized for those who could pay for their own maintenance. The former were the Colleges, the latter were the Halls of Oxford and Cambridge. We know the sequel. As the Colleges increased in wealth, they did not educate a proportionally larger number of poor little boys, but they gradually raised the standard of education, till their funds have become prizes for the reward of those who have already attained such knowledge as generally only gentlemen can afford time and money to acquire. When books were multiplied by printing, and the third school wanted was ability to read them, public and private charity founded free grammar-schools throughout the country. The name sufficiently indicates the design—grammar, not Latin schools; that is, schools for teaching the language of literature, which was either Latin, or a latinized English quite unlike the vernacular of common life. We know what has happened to the grammar-school endowments; they have gone chiefly to provide a classical education for the higher and middle ranks, the instruction they supply having become unsuitable for the poor, strictly speaking. A number of endowments have also been established for mere elementary schools; but alas for the selfishness of those who manage charitable funds! The larger endowments are in many, if not most cases, used to provide snug berths for relatives or friends of the trustees, with little regard to qualification, while the smaller ones are given to the halt, the maimed, the drunken, and even the idiotic, as a means of keeping them off the parish, by making them school-masters. Such has been the general fate of permanent educational funds, for want of adequate surveillance.

Early in the present century, an association depending on subscriptions was formed to provide elementary instruction for the poor, under the direction of the established clergy; while another and somewhat older society took charge of those schools for which this ecclesiastical connection was not desired. These were the National Society and the British and Foreign School Society. The Government of the country, with the concurrence of Parliament, aided their benevolent efforts; but, as their funds improved, these schools also have been enabled to supply an education which has become too good for the poor, and is daily growing finer and finer out of their reach. Now, therefore, the cry is, “Help the ragged and industrial schools.” But what security is there that, if favoured with government grants, they would not become too good for the ragged? Such men as Dr. Guthrie would take care to keep them as refuges for the outcast and the helpless—the “Arms of the streets.” But what guarantee would there be that landed proprietors and wealthy capitalists throughout the country would not find them a very suitable and convenient kind of school for the children of their labourers, by taking precautions to exclude those of the vagrant, the idle, and the vicious? There is no existing machinery to prevent this.

Doubtless the class which Dr. Guthrie, Miss Carpenter, and others like-minded, have taken under their patronage, are the children who have the very first claim on the state for an education; to save them from swelling the criminal ranks; and these should be cared for,

whatever becomes of the rest. Perhaps it could be shown that the industrial classes, properly speaking, and their employers, are both able and willing to find the money for their own education. But the children of parents who have no regular employment must be helplessly dependent on the hand of charity to rescue them from a course of vice. For these there ought to be free schools on the industrial or ragged plan; and the funds, from whatever source, ought not to be grudged; only there must be provision on the one hand for securing attendance, and on the other for precluding abuse. The consideration of these points we must for the present defer.

TOWN AND TABLE TALK.

(From our Fall Mail Correspondent.)

THURSDAY EVENING.

Mr. Loch left Marseilles yesterday morning, and is expected to arrive in London this evening. He brings the ratification of the treaty of Tien-tsin which has been exchanged at Peking, and which will, no doubt, be published formally. He will also bring the new treaty of Peking, and the announcement of the peace, with despatches from Lord Elgin. No one will grudge Mr. Loch his £200, which has been usually paid to the private secretary of the ambassador who concludes a treaty of peace. Mr. Loch’s sufferings and services entitle him to any rewards and honours that may be conferred upon him.

There will be plenty of news to-morrow. If anything of importance should transpire to-night, I shall let you have it at a later hour. In the mean time, it is satisfactory to know that the conditions now imposed upon the Chinese exceed, rather than fall short of, our anticipations of last week. Tien-tsin is to be added to the other Chinese northern ports which are to be opened to the trade of the world, and it will be occupied by a sufficient land force, and visited by a sufficient naval armament, until the conditions of the treaty shall be faithfully carried out, and the tranquil trading of our merchants shall be an established habit.

Those who have watched the importance of our trade relations with Shanghai, which even the war and the rebels have not been able to disturb, will know the value of establishing new depôts for commerce in the ports of Northern China, especially those in the neighbourhood of the capital. But the great advance upon the Asiatic mind which we have made by the short and decisive campaign just over, is that we have showed the Chinese that we know the road to Peking, and can at any time force our way thither. But the very ability to do all this, and more, in spite of the whole force of the Celestial Empire, will be sufficient to deter the Chinese of any party from breaking their engagements in the reckless way they have hitherto done.

The movements in the direction of well-regulated freedom are extending themselves satisfactorily in Europe. The progress in France is most gratifying; and we are still more gratified to find that Austria has really entered upon a system of government in relation to the soundest principles of civil and religious liberty, that the most sanguine could not have expected two short years ago. Whether all these improvements will avert the threatening storms from Venice and Hungary, it is hard to say. Although not given to gloomy forebodings, I cannot help thinking that we shall see the commencement of very serious complications in the spring. This is a pity, for the Italians have much work to do in consolidating their unity and strength, and many open and covert enemies to obstruct them.

The danger, however great, will not proceed from these quarters. It is more than probable that Hungary will not be content with anything less than the full establishment of her ancient monarchy; and it is certain that Italy will never be content without Venice. It is but a question of time, and I believe the time is not far off. I said a fortnight back that the French fleet would not stop much longer at Genoa, and I now fully believe that we shall have an announcement in Paris, in the first of the year, that the Programme of Milan must be carried out, and that the Pope must be handed over to the guardianship of the Italian army if he cannot reconcile his own subjects.

The state of Lord Derby’s health does not improve—*tout au contraire*. This circumstance constitutes a very serious cause of discouragement to the great Conservative party, of which Lord Derby is more than half the strength. There are strange rumours respecting the succession. Mr. Disraeli is out of the question, gifted not indisputable as he is. Sir John Pakington has already gone beyond his small beginnings. He is a clever man, but a very little cleverer man, Lord Stanley is not up to the mark, although an able politician.

The hopes of the “Opposition” are now fixed upon Lord Grey, who is less of a Whig than Lord Derby once was, and who is supposed to be capable of bringing over such men as the Right Hon. E. Horsman, the Right Hon. E. Elliot, Lord Elcho, and others ill-affected to their former friends, who think they have as much right to high places in a Conservative Ministry as Sir E. Bulwer-Lytton himself.

There is a bit of newspaper scandal which ought to be known. In a remarkable and very pious morning paper yesterday a very serious letter appeared, in which a great archaeological curiosity was described—in the shape of a stone, said to have been discovered in the excavation of a tree-garden, at or near Breamsbury, Hereford. The excavation of so many and of the tree-garden—inspired by Act of Parliament—was too much for the very unlearned editor, who gave insertion to a pretended inscription, which is not fit to be exposed to the gaze of families, and which must therefore be left to the exclusive contemplation of learned in such affairs. Perhaps the gentleman, who shrouded in a dead language—Greek—the astounding mysteries of the domestic habits of Nebuchadnezzar, King of the Jews, &c., might unravel this mystery, which is, however, so much worse than the other, that it is not covered up in an unknown tongue, or at least a tongue only known to learned men, who are proof against such jokes. But, seriously, this last one is too bad, even for holiday times.

THE GOUTY PHILOSOPHER.—No. XXV.

MR. MAGROWDER INTRODUCES A FEW MORE OF HIS FRIENDS.

I HAVE not yet informed the reader where Willye Grange is; but it is within a circuit of thirty miles of the mighty city which most people call London, but which I sometimes call Crackethorn. It is in immediate contiguity to the borough of Wrigglesbury, which I once—woe is me!—represented in Parliament before I represented that other and still more rural borough of Great Stumpington. I am on excellent terms with all my neighbours, especially with six of them, who form, with myself, what the editor of the *Wrigglesbury Gazette*—a Radical paper, with a good deal of talent and very little manners—once profanely called “the clique of the seven wise men of Gotham.” Wise or not, we are partial to each other’s society, and it is our rule to dine together once a week—sometimes in a tavern, sometimes at Willye Grange, and sometimes elsewhere—to exchange ideas, and rub off the rust of our rusticity. On these occasions we play what a little, drink a little claret or Burgundy, or, in the winter, whisky or brandy punch, and talk a great deal. We flatter ourselves that we do not talk nonsense, and that if the great world in the city of Crackethorn could hear what we say, it might learn a thing or two that might contribute to its amusement or its instruction, or both.

The gentle reader—and all readers are gentle, and ought to be, if Emerson says truly, “that we are all as superior beings,” even when we read John’s translations or Shakespeare’s plays, or the “Arabian Nights’ Entertainments” or Gibbon’s “Decline and Fall of the Roman Empire,” or a Collection of the Proverbs of all Nations—will salute us, without vulgarity, with the familiar question, “Who are you?” It is right that the gentle reader should know; or how shall he sit in judgment upon us?

I have already described myself sufficiently, and need say no more, my present object being to introduce my friends and not myself. Next to my most esteemed friend, Mr. Trench, whom I have already described, the person I most respect is the excellent General Biggleswade, late of the East-India Company’s service. The General is eighty-two years of age, and is neither shabby on his legs nor in his voice. He has a clear bright eye, a firm step, and a distinct enunciation, and lacks most of the indications of old age, except a snow-white head of hair, and a slight deafness. The General is of opinion that the natural age of a man who has inherited no ailments from his ancestors, or cultivated any for himself, by over-indulgence in his passions or his appetites, is one hundred years. He fully expects to attain that age, unless he be run over by an omnibus, crushed in a railway catastrophe, shot, poisoned, or otherwise violently put to death. The General has but one defect or vice that is obvious and palpable to his friends. He swears at what when his partner makes a mistake, or in argument when a plain proposition is controverted.

The worthy man has a theory and a practice of *hygiene*, his systematic adherence to which he has kept himself hale and hearty, and in full possession of his mental and bodily faculties for much beyond the ordinary term. Summer and winter he rises at six o’clock, throws open his windows, strips himself to the costume of Adam before he is dressed, and takes, for fifteen minutes, what he calls his air-bath. This done, he indulges himself in a shower-bath, and makes vigorous use of his horse-hair gloves for ten minutes longer. Then he takes a brisk walk for half-an-hour, whether it rain or shine, hail or snow. Then he goes to breakfast and reads the newspaper. Then he takes another walk for an hour. Then he repairs to his study for three hours. Then he takes his luncheon. Then he goes to study again for three hours more. Then he takes a third walk, or a ride, for an hour. Then he lies him to his dinner, which concluded, he devotes the rest of the evening to conversation, or whist, or any amusement that may turn up. He drinks one glass of wine at luncheon, two at dinner, and a glass of hot whisky toddy or brandy punch at bed-time.

This routine of life he seldom varies, except to go to church once upon the Sunday. He pays devout attention to, and takes part in all the responses, but invariably falls asleep after five minutes, neither more nor less, of the sermon. The voice of the preacher he declares to have a most soothing effect upon his nervous system; to be, in fact, an anodyne. He attempts to prove the truth of the statement by the allegation, which is perfectly correct, that he never falls asleep during the day at any other part of the week. He asserts, moreover, that the beneficial effect of his Sunday snooze is so great as to form no unimportant part of his system of healthy life. “In fact,” he says, “I should not be so well as I am were it not for Dr. Magrowder’s sermons. Bless the man! he is of more value to me than any physician! Temperance, exercise, bathing, a clear skin, a clear conscience, and the noninterfering ministrations of the Rev. Dr. Magrowder! With these I defy Time, and may, perhaps, reach a hundred and twenty years!”

Mr. Penultimus Jones, another of my friends, is the principal medical practitioner of the town of Wrigglesbury—a widower in the prime of life, with an excellent business, and two small children. Many a fair maid has set her pretty little intrigues in motion against him [or for him], and many a buxom widow has set her cap at him, within the last three years; but as yet without result. And there are both spinsters and widows in Wrigglesbury who, on account of the little children—to whom they would have no objection to act the part of mother—consider that of all the “wretched men” in the town Mr. Jones is the most obstinate. But he has his own ideas upon the subject, and is as rubicund, self-satisfied, and comfortable, as

man can well be. His Christian name is rather a singular one; but Mr. Jones is proud of it, not alone for its ornament, but for its use. He declares that it distinguishes him from all the large army of the Joneses—an army almost as multitudinous as that of the Smiths—and that it gives him a distinct individuality and pre-eminence above them. The name was given to him in this fashion, and for these reasons:—His father had seven sons, on whom he successively bestowed at baptism all the names that were popular in the family, or that had been worn by his fathers and grandfathers—John, James, Thomas, Charles, Robert, and all the rest. When the eighth was born—having no name to give him that had run in the family—he simply called him Octavius. In due course, a ninth son came into the too crowded domestic circle, and old Mr. Jones, at his wife’s end, solemnly declared that “there was something too much of this,” and that the new comer should be called URMUS. This was considered to be a very good name, until it was suggested to Mrs. Jones’s mother—a very excellent lady, and well educated, with a strong mind and a tender heart, and who lived in the house of her son-in-law. “I am afraid,” said she, confidentially to Mr. Jones, the first time that he mooted the point, “that thy daughter, poor soul, would not approve of it. Does it not strike you as something like an interference with Nature and Providence, and a sort of reproach also to Mrs. Jones, that you should take it upon yourself to say that this son should be the very last? Let me suggest a compromise, and call him PENULTIMUS.”

Mr. Jones was so pleased with the idea, that on the very next Sunday the lady became legally entitled to the name of Penultimus Jones.

Dr. Magrowder’s predecessor objected somewhat, and thought it a jest, and an unseemly one.

“The name shall be either Penultimus or Pendragon,” said Mr. Jones.

“Pendragon is a recognized name—a Cornish name,” said the reverend gentleman; “let it be Pendragon.”

“I prefer Penultimus; and unless you can prove from the Law or the Scriptures that Penultimus is not as good as Pendragon, I insist, as the child’s father, on naming it Penultimus. If you object to that, I declare the name shall be Antependuntinus.”

The worthy parson yielded the point. If he had not done so, Mr. Jones, *père*, declared that he would have gone into another parish in search of a more reasonable ecclesiastic; or that if he need were, he would have gone, like Channer or Kidley, to the stake, in support of his right. “An Englishman,” said he, “is but half an Englishman, and not worthy to be one, if he will not die for a principle.”

Mr. Penultimus Jones, who is a general favourite amongst us, has his opinions and his anecdotes, like the rest of us. But his present and leading idiosyncrasy is a hatred of slang, which he considers to be the curse of our age and our country, the sign and forerunner of our national decay, a debasement of the popular intellect, showing alike a moral, a physical, a spiritual, and a religious deterioration of the Anglo-Saxon race. Upon all other subjects Mr. Jones is quiet and passionless, but upon this he is ungovernable.

Another very influential friend of mine is Mr. Anthony Sennox, a learned man, and a Fellow of the Royal Society of Antiquaries. It is not always that our friend has written his name in this aristocratic style, for when he first came to Wrigglesbury he was plain Anthony Snooks. But having grown wiser, or more learned, or more proud, he has proved to his own satisfaction that Serenooks is the ancient and the proper spelling, and that Snooks and Snook sprang from Serenooks by a series of vulgar abbreviations and corruptions; thus—from Serenooks came Senooks or Sennox, and from Sennox, Snooks. The name certainly looks better in its old (or its new) form of Sennox, and priests almost as pleasantly as the patrician and dual Lennox. In moments of expansion, when he ceases to have secrets from his friends, Mr. Sennox admits that his original name of Snooks was, during his youth and early manhood, a source of constant vexation and annoyance to him, especially when wicked wags at school and college, aware of his weakness, called him “the Snooks,”—just as in Scotland there are persons who call themselves “the MacNab” and “the Chisholm,” and in Ireland, “the O’Donoghue” and “the O’Gorman Mahon”—names that sound almost as absurd to the people of the great city of Crackethorn, as “the Tompkins” or “the Pogru” would do if any one were rash enough to call himself so. Mr. Sennox congratulates himself, not only on his escape from this petty misery, but on the service he has rendered to philology, etymology, and orthography, by the correct spelling he has adopted. When Mrs. Sennox was alive, she had an unfulfilling recipe for making her husband uncomfortably red in the face, which was to assert that the name of Snooks was not derived from Serenooks at all, but from the Dutch word Snook—meaning a jack or pike; but no other person ever dared to insinuate such a charge, except the editor of the *Wrigglesbury Gazette* in a violent election contest; and he fared so badly in the literary warfare which he thus commenced, that he never ventured upon the joke a second time. Like all the rest of our confraternity, Mr. Sennox has his pet grievances, among which are to be reckoned the existence of *The Weekly Scourer*, the low state of literary criticism generally, the style of painting and drawing adopted by the pre-Raphaelites, and the monstrous ugliness and hideousness of every public monument, and more especially of the equestrian statues in London. Upon these topics he is never weary of expatiating, although, it must be confessed, he sometimes rides his hobbies

a little too hard. On these occasions General Gridgewise very coolly proceeds to discount him, and seldom fails of success.

Mr. Rann Tanqueray, another star in our Pleiades, is the local solicitor, of the greatest character, connection, and experience in all Marshshire—a worthy man, known for his love of goodfellowship, and of good Burgundy, and for his hatred of comic literature. Funny men, funny books, and funny newspapers are his special abhorrence; and he runs at them as a bull does at a red cloth, when haunted in its face by a skilful pincushion at Bayonne or Madrid. Mr. Tanqueray—who though on the sunny side of fifty, has hair white as the driven snow, and a beard as black as that of the human-headed beasts of the sculptures of Nineveh—is great in genealogies and family histories. He knows more secrets about the Gridgewise people—their loves, their hates, their debts, their vices, their misfortunes, their struggles, and the state of their banking accounts—than is pleasant at times for the Gridgewise people to reflect upon. It cannot be said that Mr. Tanqueray is beloved at Gridgewise. He knows too much. But he is feared. There is not a canting grocer in the town that Mr. Tanqueray could not shame, if he were expostulated. There is not a hypocrite that he could not expose, or a proud man that he could not very easily pull down a peg—or two pegs, or half a dozen pegs—if he had a mind to be severe. Mr. Tanqueray has twice contested the borough in the Conservative interest, and is now the member. He keeps a keen look-out after his register, and chronicles the private deeds of every voter that may be either coaxed, bought, or bullied. To continue member for Gridgewise is the summit of his ambition; and it will fare ill with any candidate who shall be hardy enough to oppose him.

The last and youngest of our members is John Wrangles, otherwise Mr. Sergeant Wrangles, learned in the law, licensed to wear a horse-hair wig (full-bottomed on great occasions), a very excellent person, who may one day be Lord Chancellor, and sit in the seat of Lord Campbell, but who would not refuse a pious judgeship if offered to him to mow, and who would very conscientiously and complacently vegetate upon it to the remainder of his life, and look no higher. Mr. Sergeant has a good practice, not extraordinarily large, for he is not a wide-mouthed, leather-lunged, brazen-faced temerarious, but a gentleman, who can afford to keep a conscience. He prides himself upon the fact, and asserts that if gentleman and barrister ever come to quarrel for possession of his mind, his heart, and his conduct, gentleman shall win the day. He manages to keep the duality in perfect accord and harmony, and if he lose a little—very little—practice thereby, he gains something better than much practice, his self-respect, and that of every one who knows him.

The Sergeant has an amative, if not a philoprogenitive brain, and would long ago have married, had it not been for the hoops, or “ben-coops,” in which the ladies have chosen of late years to hide or disfigure their fair proportions, and for the scarlet fever with which they are afflicted, in the shape of what he calls the immodest red stockings and the impudent red petticoats in which they flaunt and run, to the dismay and discouragement of bedchambers, both rich and poor. “I enu wait,” quoth the Sergeant; “but as long as women wear either ermine or hoops, or sport red boots, red petticoats, or red stockings, and, for the matter of that, brown stockings, instead of pure white, so long shall John Wrangles, Q.C., Sergeant-at-Law, and a peer expectant, live in single misery. Fast men are nuisances, Heaven knows;—but as for that women (and all women are fast that wear such detestable habiliments), may the Lord deliver me from them—now and for ever! Amen!”

Thus—the stern Rhadamanthus—our gentle reader will perceive, is the hobby or the favourite avocation of the Sergeant, than whom a better-heated and clearer-headed man never ate his terms, were horse-hair, or aspired to the woodcock.

Such is our society at Gridgewise and Wilbye Grange.

ERRATUM.—Mr. Wagstaffe requests us to correct an error in his description of the dinners given by his friend Mr. Trinch, in the substitution of the word *extremes* for *catinies*; “two very different things,” he says, “as every man knows who is accustomed to a good dinner.” But Mr. Wagstaffe, being a philosopher, should remember that every man is not accustomed to a good dinner; and make allowance for the not very heinous ignorance of our printers.

THE WOMAN IN THE MOON.—A SAMOAN TRADITION.—The moon came down one evening, and picked up a woman called Tiana, or her child. It was during a time of famine. She was working in the evening twilight, bearing out some bark with which to make new cloth. The moon was just rising, and it reminded her of a great bread-fruit. Looking up at it she said, “Why cannot you come down and let my child have a bit of you?” The moon was indignant at the idea of being eaten, came down forthwith, and took her up, child, board, nallet, and all. The popular expression of “the moon in the moon, who gathered sticks on the Sabbath-day,” observes the Rev. G. Turner, who states this tradition in his *Polynesian*, “is not yet forgotten in England; and so, in Samoa, of the women in the moon. ‘Yonder is Biana,’ they say, ‘and her child, and her nallet, and her board.’”

QUEEN CAROLINE, WIFE OF GEORGE IV., AND HER SON FREDERICK.—“My dear lord,” said Queen Caroline, one day to Lord Henry, the writer of her husband’s memoirs, “I will give it to you under my hand, if you are in any fear of my relating, that my dear first-born is the greatest son, and the greatest heir, and the greatest *celebrity*, and the greatest beast, in the whole world, and that I most heartily wish he was out of it.”

MEN OF MARK.—No. XIII.

J. A. ROEBUCK, M.P.

If we should one day select for a place in our Portrait Gallery some flashy pretentious public man—a parliamentary comit without a tail—a *quasi* leader without a single follower—who sometimes excites public expectation only to disappoint it—let us not be blamed therefore. If we selected only those “Men of Mark” who changed the entire administration and enthusiasm of the public, our series would soon come to an end; yet not before our readers had pronounced us deficient in variety and variety. The charlatan, the disappointed place-hunter, even the talkative M.P., who makes three hundred speeches in a session, may hope for a niche propitiated to their claims, if not to their craving for notoriety; and may, at least, help us to a moral, when we seek them in vain for exemplars.

John Arthur Roebuck, son of Mr. E. Roebuck, and grandson of Dr. Roebuck, an eminent physician of Sheffield, was born at Madras, in 1801. His youth was passed in Canada, to which more luring climate he removed at a very early age. Having chosen the profession of the law, young Roebuck was sent to England at the age of three-and-twenty, to take his way to the bar at the Inner Temple. Like many other law-students, he eked out a slender income by contributing to periodical literature, and the happily-significant initials, “J. A. R.,” soon came to be well known to the readers of magazines and reviews. When the Reform Bill had thrown open the avenue to Parliamentary distinction to young men of his social position, Mr. Roebuck challenged the suffrages of the electors of Bath. His pretensions were endorsed, among other Liberals of note, by Mr. Albany Fonblanque, who, as Editor of the *Examiner*, then possessed great influence with the Radical party, and who vouched for the claims and accomplishments of the promising young hero. Mr. Roebuck, who had previously been called to the Bar, and selected the Northern Circuit, succeeded in winning a seat for Bath in 1832, and represented that city until 1837. During this interval he was regarded as a follower and political disciple of the Durham school; nor were there wanting those who predicted that whenever Lord Durham should be called to form a Cabinet—an event which many regarded as certain—Mr. Roebuck would hold the Lower House, and bring in bills for household suffrage, the ballot, and triennial parliaments—the distinguishing creed of the Durhamite politicians.

In 1835, when the Executive Government of Canada and the House of Assembly of Lower Canada were at variance, the latter body appointed Mr. Roebuck their agent in England. The salary attached to this appointment was considered to be very acceptable, but as it involved the necessity of defending all the acts of the Assembly in the House of Commons, and assailing the measures of the Canadian Government, doubts were entertained whether such an agency could be reconciled with the pecuniary independence of a member of Parliament. The newspaper press, having expressed those doubts with full freedom and candour, the irascible little Indo-Canadian, like another Don Quixote, put lance in rest and ran a muck at the political press. In one of his “Pamphlets for the People” he undertook to name the principal editors and writers of leading articles in the London press. His knowledge of the means of newspaper office being, however, of the shallowest description, he was not without occasion blundering, a charge of recalculation from acquiescent and innocent indolence assailed him. To do justice all round would be humiliating in the extreme. It was necessary “to draw the line somewhere,” and Mr. Roebuck drew the line at Mr. Black, editor of the *Morning Chronicle*. An affair of honour followed, but fortunately for all parties the duel was a harmless one. The House of Commons and the country now began to take an accurate measure of Mr. Roebuck’s pretensions as a politician and a statesman. Fearless and unarmoured in attack, not too chaste in his judgments, ever ready to rise in the House of Commons and denounce both Whigs and Tories for the common use of the corrupt influences, fond of personality, and sending his insults home by the means of the upturned arm and the pointed index-finger, Mr. Roebuck was far from popular in the House of Commons. Yet outside the walls of St. Stephen’s he came to be regarded as a stern and incorruptible patriot, who not seldom put his finger on a blot, and whose faults of temper were to be overlooked in consideration of his independence and honesty of purpose.

From 1837, when the Conservatives gained both seats for Bath, until 1841, when he was re-elected with Viscount Duncan (now Earl of Camperdown), Mr. Roebuck was left without a seat in Parliament. He employed the interval partly in the study and practice of his profession, in which he never gained a high place, and partly in contributions to the *Westminster and Edinburgh Review*.

At the general election of 1847, after a hard contest with Lord Ashley, Mr. Roebuck again lost his seat for Bath. In May, 1849, the late Sir H. G. Ward, then M.P. for Sheffield, accepted the post of Lord High Commissioner of the Ionian Islands. He recommended Mr. Roebuck to go down and introduce himself to the electors, who returned him without opposition and free of expense. The hon. member has ever since represented Sheffield, although he satisfied neither the Tories, the Whigs, nor the Bright party in that borough, who return his colleague, Mr. Hatfield. The recollection of past services, of great outspokenness at certain critical times, and the advocacy of a mainly foreign policy in defiance of all implied threats and danger of invasion, have made Mr. Roebuck a favourite with the working men of Sheffield, and will probably secure him in the possession of his seat for the remainder of his political life.

Mr. Roebuck has frequently been the central figure of a parliamentary “scene.” A few years ago, after a general election, characterized by strong party feeling and a lavish expenditure, a plentiful crop of election petitions came to the surface. The Coppocks and Holmes’s were alarmed at the possible scandal of so many exposures, and a series of compromises took place, which attracted Mr. Roebuck’s attention. He accordingly rose in his place, went through the whole list, and denounced this “cross” and that transaction. He indulged in immensely, but dragged names, dates, and places into an atmosphere of publicity, and made out such a case, that, in defiance alike of Whigs and Tories, he obtained a Con-

mitter to inquire into Election Compromises. Roebuck was never more in his element than on this occasion. That terrible figure was pointed at almost every bench in succession, amid the laughter of every member except him, who occupied for the moment the opposite table. Mr. Roebuck's speech was intensely personal throughout, while the fouler insinuations, which are regarded as so much indulgence by M.P.s in their private talk, were spoken of with a lofty scorn, as if the speaker were no "mortal mixture of earth's mould," but a superior being, who sat in judgment upon the follies and crimes of human beings.

His next great speech was on the Sebastopol campaign. The public had been shocked by the disclosures of green coffee, and horses eating off their own tails, of want of food, cholera, dysentery, and death. When Parliament met in January, 1855, Mr. Roebuck gave notice of a motion for an inquiry into the condition of the army before Sebastopol. The house was crowded, and the greatest interest was felt in the result, in consequence of Lord John Russell's escape from the Coalition Cabinet, as soon as the member for Sheffield announced his intention.

The orator entered the House leaning on a stick, and took his place below the gangway. His frame, always feeble and fragile, had not many months before been struck by paralysis. His articulation was slow and measured, but his speech was plain and direct as that of the prophet Nathan before David. It was the shortest and simplest speech made in the House of Commons for years on opening a topic of magnitude and importance. Yet every allusion told. Members listened spell-bound to that clear, succinct, and too true statement of disaster, suffering, and mismanagement. A deep and low running commentary of "how" ran through the speech, like a dæmon in music; nor could patriotism find any error or exaggeration in that awful bill of indictment. Mr. Sidney Herbert and his friends tried to find excuses in the badness of the roads from Balaklava, and the undue extent of our front, and the Aberdeen Government resisted the committee. Mr. Roebuck, however, to the undiminished joy of the nation, carried his motion by an immense majority, the Ministry resigned. The Sebastopol committee was appointed, and Mr. Roebuck sat as its chairman. The Select Committee, which comprised many members connected directly and indirectly with the two services, preferred the report drawn up by Lord Seymour (now Duke of Somerset), to that proposed by Mr. Roebuck himself. But the inquiry exercised a great share in that reorganisation of the War Department and reorganisation of our military, commissariat, and medical systems,—the first fruits of which have been, fortunately for his reputation, reaped by the very minister who was held chargeable with our Crimean disasters.

Mr. Roebuck was now at his apogee of distinction. He entered into a contest for the chairmanship of the Metropolitan Board of Works in 1855, to which was attached a salary of £1,500 a year, but had the mortification to see Mr. Vestryman Thwaites gain the prize, while he was only third on the poll. The failures in Horse Guards, Admiralty, and Civil Service management, led, in 1856, to the formation of the Administrative Reform Association. Mr. Roebuck's chairmanship of this notable body has not, however, saved it from a good deal of ridicule, or prevented it from dying of inanition.

Mr. Roebuck again fell below the occasion in 1858, when the dowry of the Princess Royal was under discussion in the House of Commons. He spoke in his most pretentiously and ostentatiously patriotic strain as the "oldest dweller in England;" but while his speech jarred on the feelings of the vast majority of the House, which desired to make a liberal and ungrudging provision for the young Princess, his flash-in-the-pan exclamation, without moving an amendment, was much resented by those hon. members who wished to capitalise the annual dowry, as well as by those who wished to reduce it.

Mr. Roebuck, like the rest of the world, went to Cherbourg, and his speech about "men in pig-tails," and "old women in red chawks," excited more irritation among our susceptible neighbours than it deserved. In the autumn of 1859, the member for Sheffield prophesied that Parliament would have something else to do than pass a Reform Bill. Mr. Roebuck's loud war of foreign wars and complications at the time; but when the Session arrived and brought with it nothing more disturbing than the annexation of Savoy and Nice, the prophet became discredited. It might have been thought that the whilom disciple of Lord Durham, the Radical politician, who boasted a lofty and unstained political consistency, would have thrown himself into the thickest of the fight as a party Reformer, and distinguished himself by his support of Lord John Russell's fall. Whether the mistake seen was mortified at the failure of his prediction, cannot be accurately determined, but Reformers who had not taken quite so narrow a view of foreign dangers could not help expressing their surprise at the significant silence preserved by the member for Sheffield during the Reform debates of 1860.

If, however, Mr. Roebuck said too little on the question of reform it may be doubted whether he did not run into the contrary error on the question of Savoy and Nice. Nothing could be more insulting than the manner in which, in March last, he spoke of the Emperor Napoleon in the House of Commons. Staid politicians said it was well he was not the organ of a party, and had no following in the House; for, they added, if he had been anything but a political unit—a crochety, not to say shallow and incoherent member of Parliament—the consequences might have been serious. From his place below the gangway, on the Opposition side, the little gentleman rose to utter that language of invective of which he is so great a master—to point that terrible finger of scorn and contempt at the ruler of a great nation. With offensive iteration and emphasis, he spoke of the Emperor again and again as "THAT MAN!" the words being elongated in true tragedy style as "THAT MAN!" This unstatutable desire to be offensive would have been laid waste on any platform, but was something worse than laid waste in such an assembly. Anything more incendiary and irritating, indeed, has seldom been heard in the House of Commons. Mr. Roebuck was frequently interrupted by cries of "oh," and when he was vituperating the Emperor the thrush of his language was more than once broken by a sharp cry of "question!" Even the Conservative Mr. Bantick protested against the personalities and invective of

the member for Sheffield, and deprecated these irritating and dangerous discussions. Still the spectator could not forget that he was in the free Parliament of England, and that Greece and Rome in their best days never enjoyed a milder or more fearless utterance than was claimed by the House of Commons during the debates on Savoy and Nice.

It would be ungenerous to press over a speech delivered one Wednesday afternoon, later in the session, which exercised a profound influence upon the House, and decided the fate of a bill. A measure for reducing the hours of labour in bleaching and dye-works was before the House. Mr. Roebuck was not expected to speak, but, with a pathos that brought tears into eyes long unused to the melting mood, he pleaded the cases of women and children of tender years, and told the story of their sufferings with such moving art that members who had previously hesitated went into the lobby with him in crowds, having first gowned him by a spontaneous and enthusiastic cheer. This speech will be long remembered in the House of Commons, and will rank, for its simplicity, naturalness, and truthfulness, among the highest efforts of rhetorical power.

Mr. Roebuck has written the history of the Whig Ministry of the Reform Bill and following years with much impartiality, and to the entire satisfaction, as is believed, of his friend Lord Brougham. A few years ago he passed from the republic of letters to that of commerce, with indifferent success, the West-end bank of which he accepted the chairmanship having enjoyed a scarcely longer life than the Administrative Reform Association. Mr. Roebuck has since accepted a leading share in the direction of the Galway packet line, and one or two other commercial undertakings.

It is clear that Mr. Roebuck will never be the leader of a great party. There is a certain incompleteness in his character, a want of harmony in his aspirations, an irritability and asperity in his temper, and a somewhat Pharisaic demeanor as a politician, which diminish his influence as a public man, and effectually detach him from Parliamentary leadership. The programme of his youth and the passions of his manhood have melted away, and have left us the Roebuck of 1859. It is of no use quarrelling with him for what he is not, and never can be. We must take him with all his faults, and admit that he is a thorough Englishman, a hater of tyranny and injustice, the self-elected General-General of the House of Commons, and a "Man of Mark" who has, in his time, "done the State some service."

So, upon the whole, vive "TEAM!"

THE MINISTERIAL "WHIPPER-IN."

We have high authorities on both sides of the House in favour of government by party. One of its warmest advocates is Mr. Disraeli, who, at the Liverpool banquet to the Earl of Derby, in 1850, declared himself "thoroughly convinced that with a Parliamentary Government government by party is absolutely necessary." To government by party a Parliamentary Whipper-in is essential. The modern "Whip" may, therefore, be accounted one of the institutions of the country. He has been unaccountably overlooked by modern writers, yet no small insight into our system of Parliamentary representation may be gathered from an examination of his peculiar functions.

The subject, too, has a present interest, for is not the Premier himself about to take the chair and deliver a testimonial to a retired quasi-patriarchal Liberal whig—Sir W. Hayter? Are we not also told that Sir W. H. J. will retire from the post of chief whipper-in to the Conservative party, being succeeded by Colonel Taylor? Mr. Whitmore, we are also informed, who gave considerable help as an amateur whip, succeeds Colonel Taylor as assistant-whip. Nay, so thorough is to be the discipline enforced in the Conservative party, next session—as is natural on the part of men who intend to make a vigorous dash for office—that a third whip, a deputy-assistant-whipper-in, Mr. G. Noel, the member for Rutland, has received his commission to wield the whong and guard the fold next session.

The Whipper-in is the drop of oil in the wheels of parliamentary government. Without him the friction would bring everything to a white heat, and fire the bearings. Without him parliamentary government would come to a dead-lock. Without him parliamentary patriots would be impracticable and intolerable. By his aid they "combine the sweets of rapture with the odour of sanctity," to borrow a phrase from the bishop-hating Sydney Smith. Under our modern system of parliamentary representation we can, on occasion, run along very well with a dead Premier. But a Whipper-in, waving in and out, and presiding, ruling, ruling, dissuades his Government from the use of office, lays an Opposition by the heels. The Treasury Whip exercises somewhat different functions from the Opposition Whip, no they must be separately described.

The Government Whip is always a member of the Government, which gives him a recognised official position, and a small salary; of late years, the post he fills is that of Secretary to the Treasury. There are two Secretaries to the Treasury—the Patronage Secretary and the Financial Secretary. While the latter is chosen for an aptitude for figures, the duties of the Patronage Secretary in connection with his department, are little more than nominal. The Financial Secretary is the *idus Acherus* of the Chancellor of the Exchequer, but still a subordinate functionary; while the Patronage Secretary is a clustered official, who empies his fingers at all Cabinet Ministers, and only takes his orders from the Prime Minister.

The Treasury Whip must know by name every Member of the House of Commons. He must not only be acquainted with their faces, and the benches on which they sit, but must know their friends, their failings, their virtues, *temes, tastes*, and everything that is theirs. He must know how to hurry them to sit for any particular borough, and the nature of the "interest" on which they mainly rely. He is then able, as a political critic, to tell how they will vote, and whether they are likely to "jib." To provide against the latest contingency, he must keep whose influence is likely to keep them in the groove of his party, and, if they turn restive, who will be the best man to send down against them at the next election.

He may, out of pure simplicity, now and then say to a Member on his own side of the House, "Well, now, Skimpole, what is your little game?" but he is no true Whig if Skimpole has not been already weighed, appraised, and ticked, and his price written down in the tablets of his mind to within half a sovereign.

The Whipper-in needs a memory equal to that of the Roman emperor, who could repeat the name of every man in his army. He is the arena, the medium, the channel of Parliamentary patronage. If he had only to remember the places members want for themselves, his task were easy. But M.P.'s want "ships," pure and simple; garrisons, colonies, commissioner-ships, cadet-ships, clerk-ships, county court judge-ships, registrar-ships, and every other kind of compound "ship," for their sons, brothers, and nephews; nominations for the sons of their election constituents; and humble places in the Customs, Excise, and Post-office for committeemen, and the sons, brothers, and dependents of constituents. If he had a place, too, for every applicant, his labour would be comparatively light. But, like the poor Irishman, a smell of the red herring must often content his hungry brood. He supplies the whip of woe at the end of the Parliamentary carriage-pole, which animates the drooping vigour of the steed, and encourages him to further labour, that he may not miss so near and so necessary a reward.

It is needless to say that the relations of the Treasury Whip to his First Lord are of the most confidential character. He often knows more of the Premier's prejudices and partialities, his personal likes and dislikes, than the whole Cabinet put together. "Lie-hard wants something. He sounded me about an Under-Secretaryship. What shall I say?" If, as is probable, the Chief replies, "I won't have him in the Government. Offer him anything you like at Sierra Leone or Timbuctoo." It is the duty of the Whip to tone down the refusal, so as not to drive Lie-hard into opposition, and, if possible, to get rid of him without noise and without scandal; but his greatest armour of defence against a phibition is a previous promise or a prior claim. Mr. Pyke may think he ought to have a Commissionership or a Governorship; but when he is reminded that he has only been one session in Parliament, and that the place has been already promised to Mr. Sharke, who has followed his party steadily into the election-lobby for three Sessions, Pyke must be an unreasonable man if he do not acquiesce and bide his time. At another moment, the chief of the department has a friend to serve. The Secretary to the Colonies wants this or that colonial governorship or treasurer-ship for a friend of his own. The Foreign Secretary won't hear of any one for this embassy or that consularship but So-and-So. The Home Secretary and the other Ministers claim, in turn, the disposal of the patronage incident to their offices, and they often turn a deaf ear to the Whip's, or, at least, he makes plausible, but confidential, complaint to that effect.

The time has gone by when Prime Ministers used to say, "Ireland is my chief difficulty." Whether the Treasury Whip will ever have a different tone, time, with its whirlwinds and revenges, must disclose. For the most part, however, the Irish M.P. is modest in his acceptances, if not in his claims. A Commissionership of Insolvency, an Indian Judgeship, a Registrarship in Dublin, will usually satisfy the ardent Irish M.P. patriot; nor are even these small prizes to be had without either steady voting or very judicious flattery inducing him to do so.

A Treasury Whip behaves as firmly as Sir Robert Walpole, that "every man has his price." But he, no more than the great minister, believes that the "price" is in all cases a share of the leaves and fables. Sometimes, as we know, it is his duty to ask in his most insinuating manner, "Would you like a title?" A bit of rind, an invitation to a state ball at the palace, a word of praise for a recent speech, a confidential whisper of the Prime Minister's views upon some topic of the day, even a little chat upon the commonest events, are among the resources at his disposal and the secrets of his power. Tact and knowledge of the world are the prime qualifications for the Treasury Whip. Without them he would offend the *amour propre* of the contented and consequential members of his party, and compromise his chief a dozen times in a day.

The Whip performs a still more important duty in ascertaining and representing to the First Minister the feelings of the party and the various sections that compose it. When a party question is before the House, the Whip is ubiquitous in the lobbies and smoking-room. "I can't vote with you to-night!" says Whiffle. "Why not?" "I think there ought to be inquiry into the Horribockia business, and the anti-slavery party are strong in my borough," or "that Bar-macle job is too bad, and I won't march through Coventry with you." If any of his men hold the same language, the matter may become serious. It is the especial and particular duty of the Whip to take care that his Government are never out-voted, except with due and distinct warning. He can't help their being beaten sometimes, but he is expected on all occasions to apprise them of the rock ahead, in order that they may have the opportunity of putting the helm about. So, after hearing mutinous sentiments from any considerable number of the dissatisfied, the Whip enters the House and counts noses on the other side. If he then goes up to the Treasury bench and holds two minutes' earnest conversation with the Premier, who will be pretty sure, after the Whip has edged away, to hear the First Minister or some Cabinet colleague, announce that "The Government will not resist what seems to be the general wish of the House." The Ministerial benches cheer because they feel the general wish of the House through the mud, and the Opposition benches cheer ten times louder because they have gained a triumph and would have beaten the Ministry unless they had given way.

Upon important questions, such as the Reform Bill or the Budget, when adjourned debates intervene, it is of great importance for a Minister to learn the effect of particular speeches upon particular parties and individuals in the House. If, for example, we could suppose such a thing possible as that during the last session of Parliament, the Opposition M.P.s were turning Conservative M.P.s in dining-room and tea-room, to oppose the Reform Bill, and tell it over by speeches meant to delay, it is to the last degree unlikely that some rumour of what was going on and the lukewarmness of his supporters did not reach our present First Minister, and dispose him to abandon the bill as soon

as the pall could be decently thrown over it. The "Whips" had last year a more pleasing duty to discharge in regard to the French treaty. They report dissension and dissension in the enemy's camp. Pam makes good use of the secret but trustworthily intelligence. The uninitiated wonder at his buoyant and triumphant tone, which certainly has a good effect, for the House is full and is just going to a division. The "Whip" has sent a slip of paper or a message to his chief. He answers for a majority of eighty, and the Premier scratches at his feet and crows like a Chaucerian. The division that follows smashes the nail that he has driven into the head, and next morning the triumphant speech and "stunning" division seem like cause and effect to the public out of doors.

Sometimes great public interests are perilled by the want of judgment and want of firmness of a Whipper-in. Take an instance that occurred last session. The House of Lords it is conceded would not have been emboldened to throw out the Paper Duty Abolition Bill but for the diminished majority in the Commons on the third reading. No public writer seems aware that the majority of nine was a "scratch" division, obtained under circumstances entirely independent of any change of opinion in the House of Commons, and arising altogether from the bad management of the Chancellor of the Exchequer and the Treasury Whip. The Paper Abolition Duty Bill was a Government bill, and should only have been brought on upon a Government night. Mr. Gladstone, however, one of members' night, had just put down the bill for a third reading after the notices of motion.

There it stood, as if for fear's sake, at the bottom of all the member's hobbies, and the last thing that entered into the minds of M.P.s who went away to dress for the "reception" of a certain great lady of fashion, was that the Paper Duty would come on for a third reading that night. The House was thin all the evening, and when the Speaker went to take his evening chop at nine o'clock, about twenty members were present. Mr. Collier made a motion of adjournment on the paper, about the report of Sir John Bernard's Act, and when the Speaker left the chair the Treasury Whip snatched up to the learned member and said—"I think I shall count the House." Mr. Collier made a deprecating reply, and promised not to speak more than ten minutes on time-largess. As that hon. and learned member voted steadily with the Government, but, if rumour be true, been disappointed half a dozen times of the Solicitor-Generalship, it seemed cruel in the Treasury Whip to "count him out," when two, he promised to "cut it short," and not to speak more than ten minutes. Fatal mistake and *laissez aller*! The Opposition whip had received private instructions to bring up every available man to vote against the third reading, with a view to pull down the majority, and encourage the upper House to throw out the bill. The Speaker came back, nodded to Mr. Collier, and the mischief was done. It was then too late to count the House.

The Government orders of the day were in due time arrived at. Any odd member could have predicted what actually happened. An important Government bill was taken at ten o'clock on a member's night. Next morning the Liberal M.P.s tore their hair, swore (if M.P.s ever swear) at Gladstone and Liberalism, and exclaimed, "Who would have thought they would have got to the Paper Duty Bill last night?" Gladstone came from the great lady's reception in evening dress, and with his eyes half shut, and his arms were brought down from the same drawing-room table aristocratic men similarly arrayed, for half the House were white-chokers that night. The tall, wing-whiskered men had been summoned, but not by the Treasury house. When the Opposition benches were full they stood at the bar, and fresh cups and bumpers brought them continual reinforcements. The Treasury Whips took the alarm, but it was too late. It needed no slips of paper or whispered messages to inform the Chancellor of the Exchequer of the danger that threatened his pot measure.

The hilarious demagogue of the Opposition leaders, and the tanning cheeks of their rank and file, sufficiently demonstrated how the last day. Gladstone was never so nervous or so irritable. His white cheeks were continually slipping round to his left ear, and from time to time he pulled savagely to bring it back to a sense of neatness and tidiness. He rebuked Dimsdale and Whitbread for exchanging remarks, although in whispers, eluded under every kind of interruption, and drew down upon him some of Dimsdale's most sarcastic rejoinders.

While the debate was going on, the Treasury Whips made desperate attempts to get their men together. Messengers were sent to the haunts of M.P.s, and the telegraph wire between the House and the Clubs was worked like that American bell which somebody pulled so hard that the lap-dog howled with the strain. It was of no use. A few stragglers were caught and brought down in time for the division, but the rest had taken to their beds, for members were never weary of saying, "Who would have expected that Gladstone would bring on such a bill at ten o'clock on a member's night?" When the House divided, the tall, wing-whiskered, white-chokered men set up a cheer that made Gladstone pale with anger and mortification.

It was remarked that Mr. Brad, being new to his business, had made two mistakes that night,—the first, in not counting the House when Mr. Collier rose, and the second, in not getting the debate adjourned. It was said by the old stagers, that if Hayter, the satirist, had been the Whip, he would have reckoned up all the wing-whiskered men to a hair, and then put up some hard member who had "expectations" from him, to move the adjournment of the debate, either with or without the consent of the Chancellor of the Exchequer. Getting on with business is all very well; but *fatima lede* is a very good motto in St. Stephen's, as elsewhere, and a Whip's first duty, as we have said, is to avoid defeat, and victories that are, in fact, defeats. When Gladstone next attempts to drag his bills through at the tail of a dozen notices of motion, let Mr. Brad remind him that more time was lost by his rashness and indiscretion in pressing the Paper Duty to a third reading on a Tuesday night than would have been caused by half a dozen adjournments, to say nothing of the mischief occasioned by the loss of a Government bill, and an unprecedented encroachment upon the privileges of the House of Commons.

The Treasury Whip is a personage of so much importance, that he has approx-

printed a whole chapter to himself. Next week we shall have something to say regarding the Opposition whip and his duties, and the aids who assist both the Whippers in chief in the discharge of their onerous and, as we have seen, by no means unimportant duties.

MODERN ENGLISH WOMEN.—No. IV.

THE ENGAGED YOUNG LADY.

VERY proud, for the most part, of her conquest; very eager to parade her prize, and not backward in jingling his chains to the eyes and ears of her less fortunate sisterhood; oftentimes very vain, with a sniping satisfaction in her good luck inexpressibly aggravating to the less fortunate sisterhood—naturally a trifle jealous—and to those others, not in the least jealous, who desire to see grave events met with becoming earnestness—and who believe that the slight of beauty and life and the consequent reverently approached and piously served. To this kind of feeling the engaged young lady of ordinary drawing-room society is an utter stranger. She seldom shows any depth of love, as love need to be translated in years gone by, when it meant the Divine in man; at the best it is but a giggling together in sly corners, well in view of all the world, for the like people; or to see that she may be familiar with a young man, and no one to find fault; or a struggle about a fan or a flower, which generally gives her marked satisfaction; or a combat for a scrap of paper, ending in one of *Cherry Pickers*' peculiar sals, and you "horrid creature!" uttered loud enough for the bystanders to hear. You need to suppose that she is a person of any important admission, or a passionate cry of love: ten to one it was nothing but a comradery, or at the best but her own name, with the young gentleman's surname following after. This is the most usual manner in the modern betrothed betrays the secrets of her heart; about the gravest expression of feeling she is dumb. She is not dumb in general it seems eminently satisfactory to the object of her endearments, who responds in the same tone, and who, perhaps, would be perplexed at anything more deep and earnest, and wonder what on earth the girl meant, and couldn't she be jolly and take things easy? It makes a fellow feel such a snuff, you know, when people pull long faces at you, and you are not a girl, or a girl who hold on that way any end of hours, and no mistake. As this fact of being jolly constitutes the *Waltham* of the modern school, whatever is serious and earnest and thoughtful and of any depth of feeling, is naturally voted a bore by both sides, and thrust out of sight the soonest possible. Indeed, the main attraction of the betrothed is, that it is such a jolly thing altogether, and such capital fun in all its bearings. It is as good as any other kind of fun, and better than a great many; and, after all, binds a man, or woman either, to very little. Engagements are not marriages, and if the thing does not answer, there is no difficulty in making a tolerably sized loop-hole which lets the betrothed get out, and the betrothed before it is too late. It is rare, nowadays, to find a young couple bound in those antique bonds which regard their betrothal as a grave preparation for a grave event, or who throw into it any religious sentiment or anxious thought. It is a kind of superior lack recognized by society, and without the disagreeable consequences of rebellion from the betrothed; but society, and sentiment, and piety, and passionate devotion, and the soul that clings to earth, and life and death, and the constancy that withstands all trials, and loves on unwaveringly no matter at what cost of self or circumstance, the passion which poets have dreamed of, and men and women died for, has no more present existence than the flower of the *Prunella*. The present excitement of this phase of life died out years ago, and its place is taken by a bold unshrinking combat of good fellowship, where the one is a capital fellow, and the other a regular brick of a girl, and where all the love-making is spoken in the choicest slang favoured with *Onia* or *Latakia*. In the betrothal, as in almost all other circumstances of our present young life, there is a pitiable want of real feeling and conviction. This, indeed, is the very core of the ulcer covering modern youth from head to heel.

The engaged young lady has few ideas about her married beyond the wedding-day and the presents, her new clothes, the attention of which she will be the extreme object, and the bridal tour, which is to be such a jolly too they have fair weather and can go the pace! In the responsibilities beyond—the duties and the dangers of the new state into which she is soon to enter, she has about as much thought as the kitten on the grass, to whom that bit of mossy lawn is the wide world, and existence an endless gambol among the flowers. The betrothed is a state of affairs to which she looks forward as the lady; and of this she has generally a tolerably distinct notion; but not always a welcoming one. In some cases she acents the suggestion as personally insulting and offensive, declares that whatever happens to other people she will never have on; or, if she has, she will stifle the little marriage, and the betrothed, and the lady, and the lady hates women who have them; and as for wine, she would die at the idea—and all manner of corresponding rubbish, which might be passed by good-naturedly enough if it were only girlish whimsy veiling itself in an ugly mask; but it is too often such thorough shallow-brained flippancy that no one can resist it, nor any man, or any of the wide-spread indifference, but it is too the disguise of a genuine and lovely feeling. In others she broaches the question broadly; makes no secret of her open-eyed prevision, and provision, too, for the future; on her very bridal day—no blushing bridal day for her!—displays before her wedding-guests a double perambulator, as the most useful gift she has; speaks of the time "when she shall have a lady" without a blush or a tremor; and does her best to convince her lovers that life has no mysteries for her, no depth of silent awe, no holy sacredness, no treasuring secrets of love and nature. Of the two, the flippancy little silliness is the less offensive, though by no means the more encouraging, to the student of modern matrimony.

Marriage is not now the natural inheritance of a woman. The colonies and the army, India and the navy, draft off a large number of bold young bachelors, leaving a surplus population of unwed womanhood, half a million strong; the high tone of general living, the heavy expenses of housekeeping, and the new character of our fine ladies who can neither make money nor save it, frighten many of the remainder. Add to these the allurements of the clubs, and the greater luxuries to be obtained by one than for two,—and is not the whole meaning of our social life luxuriousness?—and there are

causes quite sufficient to render a husband something of a prize to the large concourse of English spinsters left solitary and unwed. It is for this reason that the engaged young lady so frequently manifests her not unreasonable pride when she has taken the first step towards the natural culmination of her life. She knows that the chances were against her—she knew that the sole end and aim of her education, of her exertions, of her ball-going, of her mother's teaching, and of her aunt's advice, meant simply to get her married as soon as possible; and she feels like a soldier who has gone well through his drill, or like a child who has mastered a difficult lesson and distanced his class-mates, when the magic words have been spoken which place her on the plane of her desires, and gladden her mother's heart with the prospect of "getting her off" in good time. Whether there is any real fitness of temper between the pair, any solid harmony of character, is a secondary matter; the object was marriage not union, two quite different things in the human phantasmagoria. That object was attained, and the rest may be reckoned as afterwards, according to the disposition of circumstances and the decree of fate. It is one of the saddest things of all to watch how most marriages are made up, and how little of helpful nature is allowed in a circumstance of all others most sacred and natural. They are better organised where women have a wider range to choose from, and where they may choose according to their inclinations, and not by the law of necessity.

Sometimes the engaged young lady shows a distressing gratitude and complaisance. This is the case when she is one of a family which holds the male sex as so infinitely the superior that the education, and comfort, and well-being of the female is a mere sacrifice of convenience to the convenience of some matters, they are bound to render an almost feudal suit and service, receiving nothing in return save the permission of such self-sacrifice. The daughter of such a house, with its large proportion of dowless girls, is almost sure to be genuinely grateful to the man who chooses her out from the rest to suit his needs. She is not a slave, but she is a slave to his will, and, wisely deserved, and renders him in return the whole devotion of her being, and a sincerity of admiration almost touching from its blindness. She is never weary of echoing his praises, never niggardly of her loving slavery; she gives him up her individuality—body and soul her equal sacrifice—and accepts him as the divine royalty of mankind, the lord of a family as the law of Nature's. Her sisters love him in the same manner, though in lesser degree; the mother, if a widow and sonless, follows the same course; and here is our young clergyman, or fledgling doctor, or rising lawyer, suddenly translated into a kind of emotional heaven, where he reigns like a second Mahomet, and the divine royalty of mankind is his lord, as the family as the law, the spiritual monarch of many a fine nature; for there is perhaps no condition of life so full of danger, so thick beset with snares and temptations as this, where a man has, though only one wife, half a dozen worshippers, and where his practical non-gamy does not extend the widest extent of spiritual Zoroastrianism. More than one, in such circumstances, has been known to say, "which sister he loves best; and at last engaged himself as much by accident as by choice, the scales turned by a hair's breadth of beauty, or by a more than ordinarily suggestive opportunity, but scarcely by deliberate choice and the distinct impulse of a single-minded desire. Very delightful to the senses; very enchanting to the soul; so was the soul; so was the soul; so was the soul; to sleep, and let his armour get rusted in the weeds. The tendency of most women, in the present day, is to spoil the men in one shape or other; either by suffering their vulgarities—their smoking, and their slang, and their lounging club-room respect,—or, in some purer but perhaps weaker nature, by indulging too much solicitude for their physical well-being, and maintaining too little self-respect as the teachers and ultimate arbiters of society. Some women are born slaves—slaves in every sense of the word; contented with their slavery, desiring nothing higher, knowing nothing stronger, and petulantly hostile to those who refuse to wear the same chains as they and demand from men loving companionship rather than the contemptuous protection of the superior. This kind of temper is more characteristic of betrothal than of marriage. When the butterfly is fairly caught, the wings are rubbed, and half their brightness lost in a dull grey mass of soiling left on the hand that held them. This is scarcely fair on some men, whose capture was made by the very force of sublimation; and who find, when too late, that hawk can borrow the feathers of the dove, and ravens make themselves white as swans. The same transformation takes place on the other side; and the young lady, whose betrothal was all smiles and easy-going rollick, too often awakes one morning, to find her hand in the grasp of a jealous lioness, too tyrannical to be satisfied with its fulfilment, and who has another love now respect to take its place.

It seems to me that marriages would be infinitely more successful if engagements were undertaken with more seriousness; that the future life would be better prepared for which was made a matter of religion and careful consideration. The young ladies are engaged to their future husbands, and brooder and more of their future duties, if they would rank their troublesome little a little way below their witchhood, and study to fit themselves for their coming work rather than to arrange their ribbons and laces satisfactorily, marriage would have a brighter outlook than now, and an experiment in this way, and some of our ladies, who are engaged to their future husbands, flourishing for a lifetime in the full sunshine of joy and love. Just what kind of superstructure can be raised on foundations all of dust and rubbish, and loosely put together forby? Can you carve a god out of sea-sand? Can you build out of snow and ice a palace for the generations? As the snow, so the harvest; as the grain, so the crop; if betrothals are full of levity and irreverence, it is in vain to expect that marriages will be solid, strong, and holy; if men and women prefer mere personal ease and liking to purity and love, and self-abnegation, and lofty living, they must not complain when the flowers on which they elected to feed fail to nourish them, when the waxen fawns which they chose to place of the real, melt in the fire of life's burning trials, and are reduced to nothingness beneath the weight of human sorrows. Only truth can endure the ordeal of life's agonies; only love make our pains easy to be borne, and sanctify the afflictions which must surely come, to the peace and rest of our souls. Those whose compact is made in love, in truth, and in singleness of heart, seldom fall into the end; and those whose compact is made in error, and in pride, are ever liable to be reduced to ruin by the bitter disesteem within the home, or stand beside the death-bed of their married happiness.

places generally—there appears to be a material improvement, which indicates not only increased wealth and prosperity, but an increased appreciation of the means for their enjoyment. The present is called a hard-working age, and one bears witness to this by the great race for a livelihood, and the haste to get forth more useful than formerly. Nevertheless, among the classes in question there does seem to exist a greater command of leisure and pleasure than in the days of our fathers, and, probably, than at any former period since "Morne England" ceased to be a misnomer. Men may work as much as in former days, perhaps more, but it is certain that they have better opportunities of making use of their spare time, and that he who runs may not only read, but also amuse himself.

But, of course, the advantage of this increased leisure depends entirely upon the manner in which it is employed. One Sir Richard Phillips, a knight and high sheriff, and several other distinguished things in the city, wrote some "Golden Rules for Young Tradesmen," in which he advised the said young tradesmen never to allow their apprentices and assistants any relaxation whatever from work, as the time so allowed would inevitably be spent in the process forcibly described as "going to the devil." A later generation has more liberal views of such matters than this model man among the Tick, Whittingtons and John Gibbins of the last century; and although nobly suppose that even the most estimable young men spend their entire time, after being released from business, in chattering the tedious hours of an aged aunt, or reading aloud improving books for the benefit of their virtuous families, they yet consider a few hours respite from the stern realities of life a not unseasonable request, and to take their share of the pleasures of privilege being abused occasionally in favour of beer, or even carried to such extreme lengths as a lachry. In these later days, instead of locking a man up, in order to keep him out of harm's way, we prefer to give him his liberty, and to tempt him by most possible means to employ it respectably.

Whatever, then, be the present work done, there is decidedly the days of holidays, and of holidays, on the whole, well spent. Different persons, doubtless, have different ideas of the good that a man does when he is "doing nothing." The spectacle which one popular writer used to call "the people enjoying themselves in the sunshine of heaven," another popular writer declared to mean only "a mob of the lower orders, drunk and disorderly." But we think it will be admitted that even the poor man is better behaved in public than his wont, and the notion of "robbing him of his beer" has fallen into deserved disrepute. As for the middle classes, they are certainly more presentable in the outer world than they used to be, and their tendency towards more civilized recreations may be ascribed mainly to the opportunities afforded them, and, in fact, to their being allowed a choice in the matter. A great deal of good has been effected by literary and scientific institutions, and other means for mental improvement; but these do not supply every requirement, and there are some not unenlightened men who consider that their recreations would be better employed at cricket. At any rate, what was wanted of the present time is the element of leisure in the argument, and it is just this element which has of late years been materially increased.

A certain English king, who is usually described in abridgements of history as "an accomplished but unprincipled man," but who, nevertheless, had some of the most pure qualities in his character, is said to have said, "I might have made virtue as fashionable as he made vice, had he tried the experiment, and that the climate of this country was the best in the world, because it was the climate of all others, in which one might take the greatest amount of exercise every day in the year." Charles the Second had certainly not seen the last summer, but, taken generally, there is much truth in the remark; and it is this facility for recreation—whether active exercise or not—of which we are now beginning to take real advantage. It is not among the least of the recommendations of London, that we have so many opportunities of getting out of it; and of these opportunities it is in the power of most men to partake. It is well to belong to a club that can keep their yachts, and belong to the "Clubbing Club," and have the real power to "go anywhere and do anything," which—as a barren privilege only—all Englishmen are supposed to enjoy. But it is also well—since large numbers of persons cannot command better—to have such things as excursion-trains, and return-tickets, and afternoon trips to pleasant places, with reasonable instead of ruinous accommodation when reached, and, what is more, with time to enjoy all these advantages, and time not surreptitiously snatched, but deliberately given and received, from the daily duties of life,—with the concomitant blessing of increased health for their enjoyment, and a glorious immunity as regards conduct, for the reason that the pleasures pursued within the limits of becoming liberty,—that is to say, on the decorous scale of drunkenness and breaches of the peace.

What a change, too, has taken place in the outward aspect of the Englishman! A continental growth of hair upon the face was almost sufficient, not many years ago, to cause him to be regarded as a foreigner. His departure from the ordinary bat was an offence which even strangers—apart from a man's intimate friends—would not forgive. In these days the privilege once supposed to belong exclusively to charming women has been extended to the male kind, and the most uncharming of men may "dress themselves just as they please," with perfect impunity. It may be a question for difference of opinion how far another change is desirable; but the fact is nevertheless notable that in these days cigars are smoked in public as they never were paraded before; and even such reprehensible things as clay-pipes are openly smoked by some of the first (young) gentlemen in the land. These latter signs may, as we have hinted, be open to condemnation; but the innovation of the pipe must still be accepted as a sign of the daring spirit of the day, and the contempt for conventional prejudice which has succeeded the propriety that made our orthodox countryman as near an approach to a nuisance as an object of ridicule can well be.

The Volunteer movement is another great feature. Who shall say now that England is a nation of slothful men? Who shall say now that the Englishman is phlegmatic, and awkward, and retiring? Phlegmatic! His activity amounts to the mercurial. Awkward! His capacity for drill is something wonderful, and he has learned the use of arms as if he had been born with a rifle in his hands, and his young idea had been taught to shoot from the earliest period of his infancy. He is perfectly bewildering. He will shoulder arms in the presence of Kings and Emperors, and will put a Field-Marshal up to his dirty any day in the week. The difficulty is to keep

him from performing prodigies of valour in the midst of peace. His uniform, too—what a change it has produced in the every-day appearance of our streets and public places!

The present is the age of the highest deviation from the ordinary frock and waistcoat in a place of public resort would have brought upon the deviator so large a degree of attention, that he would have rather preferred to make somebody else a present of his personal appearance. The slightest approach to an uniform was, in particular, most heinous to the wearer. Now we have almost as many uniforms as in any former time. In Paris, and the owners scarcely attract more attention, even at the hands of the grossest and most critical of critics, the small boys. Times have indeed changed, and he must be hard to please who shall say that they have not changed for the better. From Englishmen of the latter class has been taken much of the starch and superciliousness which foreigners found so ungenial and offensive; while the humble man has lost in a considerable degree the grossness and *puerile* for which their manners have been condemned. As a nation we have become decidedly more liberal and enlightened, and our prejudices are clearing away like fog, which are certainly less common than in days of yore. The latter may return to us by a visitation of Nature; but it will be our own fault if we allow the former ever again to obscure us in the eyes of our neighbours. The signs that we have noted are not perhaps important in themselves, but they are notable as indications of changes that are important—changes that tend to the enlargement of our insular character, and to render us better liked and better respected by Europe and the world.

A HORRIBLE MURDER AND A VERY HORRIBLE PUNISHMENT.

WILSH CRIME IN THE SEVENTEENTH CENTURY.

In the family archives of the dead house of Beaufort, there is a small deed, dated the 7th of January, 1663 (which means, in our present mode of reckoning, 1664), by which one Thomas Jones, of Monmouth, "gentleman," grants to his son, Henry Jones, for the term of ninety-nine years, "in consideration of the maternal love and affection which he hath for the said Henry, and also for the maintenance and maintenance and support of his estate, in the parish of Langarot-vibonard, a few miles to the north of that town. There is nothing remarkable in the terms of this grant, but a rather later hand has written the following note on the back of it:—"Conveyance from Thomas Jones to Henry his son for 99 years of part of his estate for his maintenance, but seeing his mother live so long, & keeping of her of her estate from Henry, his servant killed his mother, for which murder Henry standing mute was pressed to death, his son was hanged, & his sister burnt." In fact, this document is not only a curious record of a frightful tragedy characteristic of the state of society on the Welsh border in the seventeenth century, but, in a remarkable manner, the barbarous character of our old criminal code.

Thomas Jones, as stated above, resided in Monmouth, and had, by his wife Grace Jones, a son Henry, a daughter, and "other children," who appear, by the sequel of the story, to have been very young, although the parents were not quite so young. Henry, who was named after his father, is stated to have been carefully brought up in his childhood, and, on leaving school, he was articled to an attorney, with whom he remained five years. He was then sent for some time to London, no doubt to gain instruction and practice in his profession, and finally returned, when he must still have been very young, to establish himself as an attorney in his native town of Monmouth. During his absence in London, his father, Thomas Jones, had died, leaving property of his wife producing an income of about a hundred pounds a year, a considerable sum at that time, with which Grace Jones was to support herself and the rest of the family. He had already provided for his son by the deed mentioned above, which was probably made and executed when Thomas Jones was already in a precarious state of health.

For two years after his return to Monmouth, Henry Jones practised there as an attorney, "in good reputation and credit." Two rare pamphlets of the time, from which we are enabled to compile our account of these transactions, and which make no mention of the property he had received from his father, inform us that he married the daughter of a gentleman of Gloucestershire, and received with her "a competent portion," so that altogether Henry Jones must have been very well to do in the world. But it appears that during his residence in London he had fallen among dissipated companions, and that he had contracted dissipated habits, and that it was in this way that Henry Jones resolved upon getting rid of his mother, as it appears that, on her death, her property, or at least the management of it, was to revert to him. For this purpose he took into his confidence his own servant, a lad of fifteen years of age, called, in one of the pamphlets alluded to, George Briggs, and in the other Bridges, who was of the same name, and who was perhaps a more reliable person to him for the tragically which was to follow. Briggs or Bridges, was gained over by the promise of five pounds and a new suit of clothes.

The plan which was now laid for the destruction of Grace Jones was so cunning, that it can only be explained by supposing that deeds of violence were still so common in the island as to cause little excitement. It appears indeed that Mrs. Jones was so apprehensive of ill designs on the part of her son, that she was unwilling to trust herself alone in his company, and that the principal difficulty arose from this circumstance. Her husband seems to have lain chiefly in the immediate neighbourhood of Monmouth, and she had a barn near the town of the Monnow, about a quarter of a mile out of the town, within a short distance of which was a small wood. Late in the afternoon of Wednesday, the 11th of October, 1671, Henry Jones went to his mother's house, told her that he had warned her in vain that people went to steal the corn from her barn, but that he would go to get her corn, and she gave her corn, and he took it, and she was so well founded. In fact, he and his hopeful servant had carried several sheaves of corn away from the barn, scattered portions of them across the field, and

deposited them within the wood just mentioned. Mrs. Grace Jones refused, and it was only with much persuasion and entreaty that she was at length persuaded to accompany her son, in her slippers, to the wood then situated across the fields to the left of the banks of the Monmouth. There, as was supposed, she saw sufficient evidence that her corn had been carried away, and she followed the traces to the hedge which surrounded the wood, but for some time she refused to go in to see where the sheaves had been dropped, alleging that her son and his servant (who appears to have waited for them at the lurn) might bring her to the stile. Her reluctance was, however, at length overcome, and she found the sheaves as they had been described to her, and stooped down to take some of the ears in her hand in order to ascertain if they had been thrashed or not. While she was in this position, Henry Jones suddenly drew out a pistol, which was charged with a single "bullet," and shot her in the head, and she dropped down insensible. What followed is rather differently told in the two printed accounts before us. According to one, Henry Jones now called upon his servant to do his part, and the latter immediately drew forth a knife he had provided for the purpose, and cut Grace Jones' throat. According to the other, this was done two hours after, when they returned to make sure that their victim was dead. Both are of record that so callous were the feelings of this young accomplice in crime, that, instead of showing any distaste for his work, he merely declared, with an exclamation, that the throat of the poor lady "cut as tough as an old ewe's." Henry Jones picked his dead mother's pockets of five pounds in money, and took her rings from her fingers, and then they made an attempt to carry the body from the wood in order to throw it into the river; but for some reason or other they gave up this design, and left it on the spot where the murder had been effected. The murder had been committed in open daylight, but it was now nine o'clock in the evening, and already dark, and the murderers repaired to their little cottage, as they had shown in the commission of the deed. Briggs, or Bridges, went to a neighbouring farm-house which belonged to the murdered lady, while Henry Jones returned to Monmouth, where he arrived in the middle of the night. He had probably made a circuit to escape observation, but the superstitious imagination of the people in the story has his having encountered the Evil One, who, appearing in different shapes, alarmed or frightened him out of his wits. He went to his mother's house in Monmouth, where his sister was sitting up for him, and let him in; and she passed the night in washing the blood from his clothes.

This is only the beginning of the tragedy we have to relate. The murder, as we have said, was planned and carried out without much caution, and could not remain long concealed. Early on the following morning an old woman of Monmouth went into the wood to gather sticks for firewood, found and recognized the body, and immediately carried information to the magistrates, who proceeded at once to Henry Jones's house, and, finding him in bed, told him that his mother had been murdered in the night. Jones, who the words of the printed accounts, "made very strange of it, and seemed to be much troubled;" nevertheless he rose and accompanied the magistrates and some others of the inhabitants of Monmouth to the scene of the murder. He was probably already an object of some interest, and very distinct inquiries of shoes were observed in the ground about the spot, somebody suggested that they should be tried with the feet of those present, and they were found to fit exactly the shoes of Henry Jones, who upon the strength of this discovery was arrested, as well as his servant, and subjected to examination. The lad confessed at once, and his servant, who was a very different character, in regard of his guilt. Reports had now gone abroad in relation to the conduct of his sister, Mary Jones, who was also arrested before the magistrates; but she protested so strongly her entire ignorance of the whole transaction, that bail was accepted for her appearance at the ensuing assizes, and she was set at liberty. Some four or six weeks afterwards, however, she made her escape from Monmouth, and had proceeded some distance on her way towards London, when she was overtaken by her bail, who, hearing of her flight, pursued and captured her, and lodged her safely in Monmouth gaol.

The Assizes were opened at Monmouth on Thursday, the 7th of March, 1872, and Henry Jones was put upon his trial the next day. He had passed the winter in prison, where he had been visited by some pious ministers, had never denied his guilt, but had shown great marks of contrition; but he had formed the resolution, perhaps at the instigation of some of his friends or relatives, not to plead to the indictment. As the law stood at that time, a prisoner who refused to plead could not be convicted, and thus he saved himself from forfeiture to the Crown; but his own punishment was worse than that which would have followed his conviction, for a man refusing to plead when brought to his trial was subjected to what was called in the old law phraseology, the *prince dore de forte*, which meant simply that he was to be pressed to death. When placed at the bar, Henry Jones persisted in retaining mute, and accordingly the judge pronounced upon him the sentence usual in such cases, in the following words:—"That the prisoner shall be remanded to the prison, and laid there in some low and dark house, where he shall lie naked on the bare earth, without any litter, rush, or other clothing, and without any garment above him, and that he shall lie upon his back, his head uncovered and his feet, and one arm shall be drawn to one quarter of the house, and the other arm to another quarter, and in the same manner shall be done with his legs, and there shall be laid upon his body iron and stone as much as he can bear, and more, and the next day following he shall have three barrels of barley [brewed] without any drink, and the second day he shall drink (three of the water that is next to the house of the prison (except running water) without any bread, and this shall be his diet until he be dead." Such was the barbarous punishment in our old criminal code for a prisoner who refused to plead to his indictment. In this case it was carried into execution in a cellar belonging to the jailor, whose name was George Sedler, and its frightful character will be better understood when we inform our readers that Henry Jones was placed under the pressure on the Saturday, the day after his sentence, and that he only expired at mid-day on the following Monday, having been about forty-eight hours dying! He is said to have supported his punishment with the utmost patience, and was unattended by pious ministers who passed the time in prayer. After his death, a case of conscience was put by the ministers, whether a Christian might, *sub conscientia*, refuse to plead on his trial, and it was decided in the negative.

After Henry Jones had been carried from the Court of Assizes, the trials

of his accomplice, Briggs, or Bridges, and of his sister, were proceeded with. As the first of these repeated his confession, he was condemned to be hanged. Mary Jones still asserted her innocence, and was supported by the declaration of her brother, but it was proved in Court that she had not only sat up for her brother on the night of the murder, and washed the blood from his clothes, but that she had been the younger children for inquiring for their mother, and had sought in other ways to conceal any knowledge of the death of the latter, and these circumstances, combined with her attempt to escape, decided the jury in bringing her in guilty as an accomplice, at least after the fact. It is probable that a bad reputation also went against her, for in a letter written by Henry Jones to his wife on the morning on which he was put under pressure, while still asserting his sister's innocence of this crime, he expresses his belief that her fate was a judgment upon her from heaven for her "lewd" and wicked life. By the same barbarous criminal code which pressed a man to death who refused to plead, a woman's crime seems to have been judged much more detestable than the similar crime in a man, and when she was sentenced to death she was condemned to burning instead of hanging. On the Saturday following the death of the principal criminal, the 16th of March, 1872, the last George Briggs was hanged at Monmouth, and Mary Jones was at the same time burnt at a stake by the side of the gallows.

This remarkable case affords the latest instance with which we are acquainted of the application of the *prince dore de forte* for the refusal to plead to an indictment; but the practice of burning female criminals may be traced to a much later period, though only by rare cases. Almost a century after the Monmouth tragedy of 1671 and 1672, in the year 1764, as we learn from the Annual Register for that year, and, singularly enough, in this same town of Monmouth, a girl of eighteen years of age was burnt for the murder of her mistress.

SPIRITUALISM—ELIZABETHAN AND VICTORIAN.

[THIRD AND CONCLUDING ARTICLE.]

For some time after the arrival of Dr. Dee and his friend in Poland, they seem to have worked away zealously at crucible and show-stone, now making poor Laski believe that they were on the eve of transmuting hoops of old iron into gold, now dazzling his mind with prospects of the coveted Sarmatian diadem. Meanwhile, the entries in the Diary were not neglected. What a mass of babbling is contained in these records of "Angelic Conferences!" It has been our fortune to fight our way through many a pile of literary rubbish; but such mudpots as this we certainly never waded through before. Groping about in this delfish region for very many days, we have collected some curious particulars, and find amongst other bits of information, that Dee was prepared for his new post of king-maker, by having opened to him "the forty-eight gates of understanding, whereby he is enabled to judge perfectly of the world, and of all things which are subject to an end." Dreadful convulsions were, it seems, coming. The earth was sick to death of the unsavoury rogues and rascals, and with which it was peopled, and soon there would be "a hotchpotch of the wicked in the world, and the damned in hell." "Tired of this world," said Antichrist as was to appear presently. "Tired," added the distinguished chieftain of Landrum-guns, "shall we, we dwell among the kings of the earth, for they shall be chosen all anew." Before the end of the third year, all present kings and governors should perish. How Dee was to upset kingdoms, pull down and raise up princes, we explained in the last issue.

On the 28th of June, 1584, it happened that while Edward Kelly was lying awake in bed, an angel, "clothed with feathers strangely wreathed about him all over," came to the bedside, and "patted him [Kelly] on the head gently, to make him the more vigilant." Then was vouchsafed a remarkable vision.

Diagram illustrating of Kelly's Vision. From the engraving in "A True and Faithful Relation of what passed between J. Dee and some spirits, &c." Edited by M. Cresswell, D.D. London, 1660.

The above diagram represents the globe. At each of the four quarters of the compass "a stuporous belligerent custie" was beheld by Kelly. From

within each of these castles a trumpet was thrice sounded; and immediately after, from each castle, a cloth "about the breadth of a table-cloth," was flung or shaken to the ground (probably as a sign that the spirits had done business). Then a grand procession issued from the gates of each castle. First marched a trumpeter, blowing his instrument lustily; next came three "engine-bearers;" and after these, "six ancient men with white beards, and staves in their hands." The four-and-twenty old gentlemen thus simultaneously issuing from the four castles, were no other, we are told, than the four-and-twenty spirits mentioned by St. John in the "Apocalypse." (These seniors, who, like the Irishman's bird, seem to have had the faculty of being in two places at once, are represented at the centre of the diagram as holding a consultation together.) After the seniors strode forward "a comely man with very much apparel on his back, and having a long train." After this gentleman five spiritualist princes (and, doubtless, his train) are supposed to be no less a person than one of the four great angels of the earth, "the four overseers that Providence hath placed against the usurping blasphemy, misuse, and stealth of the wicked and great enemy the Devil." Next were five crosses, moving, not on the earth, but in the air: from each of these crosses looked out ten spirits, being "the angels of all the airs, which presently give obedience to the will of men when they see them." After each cross-marched sixteen angels, "dispositors of the will of those that govern the castles." The tail of each procession was composed of a countless multitude of spirits.

The meaning of this wondrous vision was explained to the Doctor next day by the spirit *Arv*. By the instrumentality of the spirit host who had shown themselves in solemn procession, was Dee to rule the waves and have authority over the land. "*Herby*," said the interpreting spirit, "*you may subvert whole countries without armies, which you must and shall do for the glory of God. By these you shall put the forces of all the princes under the empire of our will, and shall bring to the subjection of Dee, who was thus constituted king-maker and kingdom-upsetter in general.*"

Such were the magnificent promises of the spirits. Now for a few hurried glances at the performances, both of spirits and mediums, in the latter part of the grand spiritualist drama played out with such skill and boldness by the Elizabethan conjurers. In the first place, the brows of the "Noble Polishman" were never encircled by kingly crown, and having eaten the credulous Count almost out of house and home, Dee and Kelly, and their wives and families, left him and his impoverished eschequer to try their chances with the Emperor of Germany. But Rudolph was the reverse of a gullible person, and after repeated but fruitless efforts to inculcate him with a belief in their possession of the philosopher's stone, the worthy pair were one morning ordered to quit Prague within twenty-four hours. Had they tarried six hours longer, they would have obtained the dungeon or the stake at the beck of the Pope's nuncio. They now returned to Poland, sought an interview with Stephen, King of that country, predicted to him by the spirits in the "crystal globe" that the Emperor was about to be assassinated, and that Stephen (if he behaved well to the mediums) should reign in Rudolph's stead. Stephen was befooled by the conjurers, and advanced large sums of money, from time to time, in order that they might follow their alchemical pursuits. Eventually, however, he got disgusted at their impostures, and the services of the two impostors suddenly turned up in the person of Count Rosenberg, a nobleman of large estates in Bohemia. Him they assured of the crown of Poland, and a term of life extending to 500 years. After remaining in Rosenberg's domains, however, for four years, during amply and provided with money in a marvellous amount, the conjurers, on the second of the autumn of 1602, the five years following Kelly roved throughout Germany, gaining a livelihood by telling fortunes and pretending to transmute the base metals into gold. At length he was thrown into prison on a charge of sorcery, and, attempting to escape, broke both his legs, and died of the injuries. He returned to England, and obtained a small appointment from the Government. This appointment old age compelled him to resign in 1602. During the last six years of his life he supported himself by telling fortunes, and died in extreme poverty at Mortlake, in 1608.

That these notorious mediums worked upon the minds of their dupes by means of ventriloquism, optical delusions, &c. &c., we firmly believe; but at this time of day we have, of course, no means of verifying these opinions. To such as wish for further information respecting their career, we strongly recommend that book to which we have been indebted for so much of our information on Elizabethan spiritualism, and from which we are quoted more than once. The second volume of the "Memoirs of John Dee and Edward Kelly in 'Memoirs of Extraordinary Popular Delusions,' will be found one of the most curious chapters in one of the most interesting and instructive histories of human error and credulity that ever was penned.

We have now indicated, in so far as the limited space at our disposal permitted, the main points of resemblance and difference between Spiritualism Elizabethan and Spiritualism Victorian. For closing this series of papers, we shall give attention to a few reflections which have suggested themselves during our progress.

Now, as in the sixteenth century, so we note those people of imaginative temperaments, who are ready to believe anything, if it only belongs to the wild and the wonderful, who, in the words of the illustrious Faraday, "leave the faculties which relate to judgment almost entirely undirected, and their decisions at the mercy of ignorance, prejudice, and passion, or even accident." But not and not in the time of Elizabeth, do we observe a large class of minds who, informed and armed with a knowledge of the principles of natural philosophy, steadily refuse their assent to the arrogant assumptions of spiritualism so-called, and decline to believe in a new revelation, which, paraded before them in all the pomp of scientific formulae, will not descend to the level of the applications and the verifications of ordinary scientific tests. While firm opponents of empiricism, these men possess that humility which belongs pre-eminently to the true votary of science. They will not undertake to render a reason for all phenomena which may be brought under their notice; but they believe that Nature never conceals her secrets, that, like her great Author, she is ever ready to-day, and for ever. They remember, moreover, how many things which are now clear as sunlight to the mass of men would have been set down to supernatural interposition not a great while since.

As one illustration of this superstitious out of multitudes pressing upon

our memory, let us suppose that before balloons had been heard of, or the laws of pneumatics generally known, two persons were in dispute as to the gravitating principle. Suppose that one of these disbelievers in it altogether, and that he was invited by the other to witness the experiment. Being no less than the ascent from the earth in broad daylight of at least half a ton of iron and other matter through the agency of a balloon. Unacquainted with the laws of pneumatics, would not the doubter, if made of ordinary stuff, be inclined to ascribe these strange phenomena to supernatural influences, and patiently investigate them? At present, however, we have a question of the relative weight of gases. When thoroughly understood, it is no more wonderful than that a cork, when pressed to the bottom of a vessel filled with water, should rise to the surface. The skyward flight of the balloon is, indeed, but another evidence to the truth of the principle of gravitation.

Amongst the honest believers in spiritualism are many highly-gifted individuals. In fact it is mainly owing to the countenance offered to this doctrine by estimable but imaginative men, whose minds, as we believe, have never been accustomed to weigh evidence impartially, or trained to be aware of "the tendency to deviousness" regarding all we wish for, and the necessity of resistance to these deviousness,—"it is owing, we believe, to this patronage, that spiritualism has attained to its present dimensions. We may be wrong in our intellectual estimate of these remarkable persons. If proved to be so, we shall make a full retraction. Meanwhile, it is clearly of importance that we should have the co-operation of these honest and gifted spiritualists in the settlement of the question. We earnestly appeal to them to step forward, and to take the place in putting spiritualism upon its fair trial. At the same time we must frankly avow our thorough distrust in experiments conducted in darkened chambers. We shall not believe, indeed, without the simplest, plainest proof that the spirits of the illustrious dead, or of those whom we have lost in life, are summoned for the purpose of answering the most important questions and spell out vulgar names. Nor shall we believe, without the strongest corroborative evidence, that a fat lady or a stout gentleman can, by supernatural means, be suspended between a West End carpet and a West End ceiling. This last fact, indeed, involving as it does the upsetting of the greatest physical law, reminds us that this principle of gravitation is the only point upon which the spiritualists have fairly joined battle with the unbelievers. "What truth beneath that of Revelation can have an assurance stronger than this!" exclaimed he upon whose shoulders has mantle of Newton has descended. With two hits of pasteboard, four thin rods, two India-rubber rings, a slip of foolscap, a yardstick, and a pin, Professor Faraday constructed an anti-spiritualist machine, in the shape of a lever and index; and speedily put to the rout the whole host of enthusiastic believers in the supernatural character of table-turning; showing, as he clearly did, the unscientific movements of the hands upon the tables, so that either before the table, or rather before the table, or rather before the table, while in many cases all moving power was annihilated. No wonder they still chafe at the recollection of their sad overthrow and dire defeat, and hurl maledictions at the glorious head of their conqueror.

We cannot better conclude than by reproducing the suggestions offered to the spiritualists some years since, we are sorry to say without being turned to account. This spoke the greatest natural philosopher alive, in his lecture on "Mental Education," delivered at the Royal Institution in 1864.

"Why not consent to apply the knowledge we have to that which is under education? Shall we educate ourselves in what is known, and then, casting away all we have acquired, turn to our ignorance for aid to guide us in the unknown? If so, we instruct a man to write, but he is never acquainted with letters to read that which is written; the end will be just as unavailing, though not so injurious, for the book of nature which we have to read is written by the finger of God. Why should not one who can lift a table into the air, and simply lay it flat, and bring it into relation with the law of Newton. Why should he not take the top of his table (it may be a small one), and placing it in a balance, or on a lever, proceed to ascertain how much weight he can raise by the draught of his finger upwards; and of this weight, so ascertained, how much is represented by his own system of the finger downwards? He will then be able to investigate the further question, whether electricity or any new force of matter is made manifest in his operations, or whether action and reaction being unequal, he has at his command the source of perpetual motion. Such a man, furnished with a nicely-constructed carriage on a railway, ought to travel by the mere draught of his own fingers. A far less price than this would gain him the attention of the whole scientific and commercial world, and he may rest assured, that if he can make the most delicate balance indifferently by such a method, he will be able to force the force of nature to his gain, he will not fail to gain universal respect and most honorable reward."

S. L.

WHAT CONSTITUTES A SPECIES.

It is perfectly obvious that the history of nature is the work of man. It is his description of what has been and what is. Though his acts have great influence over much that exists, for he modifies several characteristics of animals to suit his purposes, and, by his industry, he has multiplied the number of his species, and brought them to the verge of the horse and swiftness to the mace. He was against beasts of prey, and extirpating them makes room for the sustenance and life of animals more suitable to his wants. Sheep with large crosses, small bones, and heavy fleeces, and oxen which bite quickly, bear a vast amount of flesh, and differ as much as horses or elephants from their pristine parents, are the produce of his skill. Nevertheless, when he writes or speaks of these and other portions of the material world, he only describes, and can only describe, what is and has been. In order to accomplish this purpose conveniently, and convey knowledge from one person to another, he classifies objects together, and they usually receive the name of species as they differ from each other. Thus we have in common life from noticing obvious similarities and differences, dogs, horses, men, sheep, cats, snails, monkeys, apple-trees, oak trees, &c. &c., each of which is called a species.

This rough kind of classification, though useful and essential, does not satisfy the scientific inquirer. He notices the differences of the species, and he seeks to ascertain what he wishes to convey to others, a much more extended

* Professor Faraday.

† See *Albion*, July 3, 1860.

and elaborate classification and nomenclature. He separates objects according as they belong to the animal, mineral and vegetable kingdoms, into classes, genera, orders, groups, species, &c.; and he does not leave his description on outward appearances and obvious functions. He dissects animals and plants; he ascertains the forms in which minerals crystallize; he watches growth and formation, and he classifies objects by what he discovers or supposes to be their fixed forms and the principles of their structure. From first to last, however, from the most general and common classification by the rudest savage, of objects into animals, minerals, and plants, he leads us to the more recondite researches of a Cuvier or an Owen ascertaining the invariable form of a tooth or a cranium, the whole of natural history is merely description. It is worthy of notice that only from the minute researches of the learned do any differences of opinion or dispute arise as to species. Whatever may be the scientific differences of schools, the multitude will never contend man with an ape, nor a pigeon with an eagle. Genera, species, and varieties are all, therefore, human inventions for human convenience. They are dictated by certain differences and certain resemblances in the objects classified; but the most complete classification is altogether a work of art—the creation of man, not the creation of nature.

A species, accordingly, although of late so many and such heated disputes have been generated amongst naturalists (some contending that one species may be transmitted by the influence of circumstances into others, like Mr. Darwin; other naturalists, like the author before us,* contending that species are not transmissible), is merely a group or number of individuals classified together by man, and is transmissible from one to another or not as man pleases. Under this aspect the question of the transmutation of species merely concerns classification. It is a dispute about the use of words. Whatever science may propound the people will continue to speak of men and dogs and horses as distinct species, and will not be troubled by the differences of opinion.

But the things classified are not the classification; and about them—about what some observers notice and others do not; about what some active men effect and others do not; about what some poetically-minded men imagine or conclude and others do not, there are virtual and important differences. The use at present of the word species so much interested in the learned world is not really whether one species or group of beings, artificially arranged apart from others, can be run into another—for this the definition, as long as it is preserved, forbids,—but the purely speculative and far more important difference whether animals, plants, &c., were originally created as we see them, or were created, in the first instance, differently, and modified, by the influence of some other forces, the work of the same Creator. Did all objects come as they now appear to us from the hand of the Creator, or have they undergone, and are they still undergoing, successive modifications by and from causes controlled and ordained by Him? Was creation wholly and fully completed at once, or is it for ever undergoing changes. The latter view is preferred. This is obviously a very wide and very important difference, which requires the whole knowledge of our race, and almost infinitely patient investigation to ascertain. We presume not to decide such a matter in a few paragraphs. We can only indicate the principle at issue.

The whole science of geology rests on the assumption, the result of many observations, that the whole surface of the globe has undergone several successive changes, and is not now as it formerly was. However closely the men and animals of this age resemble the men and animals of a former age, nobody denies that many successive differences in individuals are observed and traced. History is a succession of changes. The man who is the ancestor of a monarch to the extent which the Europeans command them, the services of electricity, gravity, and affinity, is very different from the man or the people who had only their mere muscular untried force to rely on for subsistence and safety. His form may be the same, but his mind is different. With these and many similar evidences of change ever present to us, which have given rise to the supposition that the whole visible, tangible, and measurable universe is for ever undergoing some kind of change, the degree in time being the only question at issue, it is impossible to avoid concluding that similar changes have always been going on. There is, in fact, a coincidence of opinion on this subject amongst the warring naturalists, and all agree that change, *within certain limits*, is universal.

But the limits are not defined. Why or how shall man, when change is admitted, not knowing and being incapable of knowing the whole, presume to define those limits? This, however, is exactly what both classes of disputants do. The gentlemen on the one side say the species transmitted into another, and the gentlemen who say that transmutation is provided for, and creation is limited to one primordial material type, or a few types, equally set bounds to Almighty Power. Both imply that some one line of conduct is imposed on the Creator, or that some law flows from His own arbitrary and logical necessities of their own minds, which flow from their organization, imply equally stringent necessities on His actions. Professor Agassiz and others suppose that they found a proof of His existence in a design which implies that He is a Being thinking like man himself. But thought in us is subject to limits and laws; all our designs are formed with a view to motion or force, and in subsequence to it, which is very different from creation. At present, when the limitations imagined of Divine power are for ever receding, and the further we push our inquiries the more we are filled with wonder at what we cannot comprehend, it seems very extraordinary that *ad-ventitious* philosophers should plume themselves on their exalted view to motion or force, and convenient definitions to the Almighty Power. From defining a species for their own advantage they fix a limit to the limitless.

The science which loses itself in contradictions ceases to command the public confidence. A slight retrospect of modern progress teaches us that learned men, rather than their reason, have been the great source of knowledge, which tends to equalize mankind, and destroys any hope of forming a class apart, commanding homage and securing power by a peculiar wisdom, have fled for refuge into a mysterious nomenclature, and endeavored rather to make their pursuits incomprehensible, than adapt their knowledge to the level of the vulgar. What is the meaning of the following words, quoted by our author as a model and an authority on "species," and resembling much writing on this subject?—

*"In endeavouring to form a conception of what constitutes species, our ideas of Species and Transmutation, nor the Result of Secondary Causes. Being a Critical Examination of Mr. Darwin's work, entitled 'Origin and Variation of Species.' By C. B. Rees, Esq., M.D., F.R.S., Physician to the Exeter and Colchester Hospitals. Gloucester & Son."

must be separated from the *individual*, which is merely the representative of species in some one of its special cases or conditions. Every nature or perfected being has had an anterior organic history, included in the history of its structural progression, from a collection of simple cells to a natural body possessing individual and distinctive characteristics. No one of its states or conditions constitutes species; neither the perfect insect, nor the pupa, nor the larva, nor the ovum, fulfil in themselves the conception involved in this term, but simply represent the various relations the individual maintains to physical and animated nature, and during the continuance of which its structural and peculiar biography is written.

"The perfect being is the temporary expression of a thought, or conception involved in the series of actions which constitute in their entity a *special and definite creation*, and in this state has reached the acme of its perfectibility, a point beyond which it cannot pass; but after a variable period its organic part is broken up, and resolved again into the simple or primary elements of matter. The species, or the thought, however, does not cease to exist during the process of organic disintegration of the individual, and previously to its disappearance or death it represents its special organism, or rather its species, by means of an ovum, in which the organic action destroyed in the previous representation, are recombined, and again carried through a series of change states to the point of its previous organic perfection; commencing in the simplest organic state, and continually returning to renew a *series of predetermined special development*."

This, with all its emphasized words (so in the book), may be correct natural history; regeneration may be, as the same "elegant writer" also says, a "manifestation of continuous growth in species in their respective cycles of organic evolution around which the structural processes revolve and repeat themselves;" but all this is not common sense; and if it is not common sense, it is not correct and recommendable knowledge, and is better calculated to hide than show it. That our author quotes such passages with approval, is an all-sufficient proof that he is quite inadequate to discuss the great phenomena in question. His book, in fact, is a collection of small and captious objections in detail, sneeringly expressed, to Mr. Darwin's opinions, and is quite unworthy of the great subject on which this gentleman is writing, and much extending his father's doctrine, has interested the public.

THE COLD ON CHRISTMAS-DAY.

THE temperature of the air in the neighbourhood of London on Christmas-day, at eight o'clock in the morning, was as low as 5° of Fahrenheit, that is 24° below the freezing point of water; at 9h. A.M. it rose to 12°; at 10h., to 13°; at noon, to 16°; and it gradually increased to 30° by 11h. P.M., which was the highest temperature during the day; at midnight it began to fall, and fell to 25° by 7h. A.M. of December 26. In my account of the weather at the end of the month, I shall speak of the cold weather of this week in connection with previous cold seasons.

JAMES GLAISHER.

NECROLOGY OF EMINENT PERSONS.

MARQUIS OF DALHOUSIE.

On Wednesday, the 19th, at Dalhousie Castle, Middleton, aged 48, the Most Noble the Marquis of Dalhousie, K.T. James Graham, Marquis of Dalhousie, was the youngest of the three sons of George, 9th Earl (who was a General in the army and G.C.B.), by Christiana, only child and heir of Charles Brown, Esq. of Colchester, co. Huntingdon, and was born in April, 1812. He was educated at Harrow School, and at Eton, where he graduated in 1833, taking fourth-class honours in classics. He contested, but without success, the representation of Edinburgh, on Conservative principles, in 1835, with Mr. Abercromby, subsequently Speaker of the House of Commons (afterwards Lord Dunfermline), and with Sir John Campbell, the present Lord Glenelg. By his frankness and manly straightforwardness, however, he won golden opinions, and was more successful than from his own partisans. In 1837 he was returned to the House of Commons for the county of Huntingdon, and on the death of his father, in 1838, he succeeded to the earldom of Dalhousie. In 1842 he was appointed Vice-President of the Board of Trade, and in 1845 President, with rest in the Cabinet, resigning with the Ministry in 1846. In 1847, on the return of Lord Hardinge from India, he was offered, and accepted, the Governor-Generalship, being the youngest man ever appointed to that responsible office. Shortly after he landed in India, the Sikhs broke out a second time into war, but they were defeated everywhere. He then "annexed" the Punjab to the British dominions, and it was in the reduction of this important territory that he first employed the administrative energy and ability of Sir John Lawrence and the late lamented Sir James Hudson. Sir John Lawrence, K.C.B., Lord Dalhousie subsequently followed out the same line of policy by annexing Pooné and Nagpore, and finally the vast and wealthy Kingdom of Oudh. The opinions of statesmen may vary, but it is not of time as to the justice and expediency of the course of Indian administration, in which Lord Dalhousie's name will be for ever identified; but, while exonerating and annexing, he did not forget to develop the resources of the country. Railways, canals, and telegraphs were established; his eye was directed strenuously to reform the administration of the civil and legal departments, his extended education and public works, more especially promoted railways, canals, and electric telegraphs. In 1849 he was elevated to the dignity of a marquis, receiving at the same time the thanks of both Houses of Parliament. About the same time he was made a K.T., and, on the death of Wellington's death, in 1852, Lord Derby conferred on him the Lord Wardenship of the Cinque Ports and the Governorship of the Castle at Walmer. The marquis returned to England, in October, 1856. His marriage, with the Lady Susan G. Hay, daughter of the Marquis of Tweeddale, to whom he was married in 1838, was on her way home from India, when just within sight of the Land's End, in 1853. As by her he had issue only two daughters, his marquinate in the peerage of the United Kingdom expires; as does also the English Marquis of Dalhousie, conferred on his father in 1813, after the battle of Waterloo. The Scottish titles devolve on

the deceased nobleman's cousin, Lord Panmure, now 11th Earl of Dalhousie, but who will continue to sit and vote in the House of Lords by the title *under which* he has been so long known to the public. His lordship is a widower without issue; and in case of his death without contracting a second marriage, the barony of Panmure would become extinct, while the Scottish titles *would* devolve upon a son. It is not, however, as if the Scotch peerage were *not* to be *transmitted* to a son said to be of German or Danish extraction, and they have been of some in Scotland since the reign of David I. Two centuries later, viz., in A.D. 1380, we find Alexander Ramsay, Warden of the Middle Marches and Constable of the Castle of Roxburgh, a formidable opponent of the English arms. A cadet of this house was Allan Ramsay, the Scottish poet, who thus apostrophised the head of the house:

"Dalhousie of an acid descent,
My pride, my stoupe, my ornament."

Dalhousie Castle is a modernized building in the castellated form, and situated on the South Esk, two or three miles up the river above Dalkeith Palace and Newbattle Abbey, the noble seats of the Duke of Buccleuch and the Marquis of Lothian respectively. The original castle is recorded to have been of vast antiquity, and of great strength. The other remains of the same magnitude are the ruins of the castle of Dalkeith, and the tower of the castle of Dalkeith, the latter of which was built by the Duke of Buccleuch, the heiress of the Brouns. One of that noble family, some 300 years ago, married a daughter of John, 8th Lord Yester, with whom he obtained, by way of dowry, a peer, with an assurance that as long as the peer should be preserved, the family would be assured of unshaking prosperity. If we may believe O' Black's *Black & White Tourist in Scotland*, "the peer is still preserved at Colinton, in a silver box."

THE EARL OF MEXBOROUGH.

On Tuesday, the 31st inst., at the house of his son-in-law, the Hon. Captain Lindsay, M.P., in Portman-square, aged 77, the Right Hon. John Savile, Earl of Mexborough, of Lifford, county Donegal, Viscount Poughlington, of Ferns, and Baron Poughlington, of Londonderry, in the peerage of Ireland. His lordship was the only son of John, second earl, by Elizabeth, daughter and sole heir of John Stephenson, Esq., of East Burnham, Bucks. He was born the 3rd of July, 1783, and succeeded to the family honours in February, 1820. He represented Portman in the Parliament of 1831-2. He married the 29th of August, 1807, Lady Anne Yorke, eldest daughter of Philip, the third Earl of Hardwicke, by whom, and before he left her, he had surviving issue three sons and a daughter, namely, Viscount Poughlington (now deceased), the Hon. Charles Starke Savile, and Lady Sarah, married to Colonel the Hon. James Lindsay, M.P., of the Grenadier Guards. The deceased earl was succeeded in the family honours by his eldest son, John Charles Savile, who died on the 4th of June, 1850, and married the 24th of February, 1842, to Lady Rachel Walpole, eldest daughter of the late Earl of Orford, who died the 21st of June, 1854, and by whom he has an only son, John Horace Viscount Poughlington, born in 1848. The present peer was educated at Eton, and was called to the bar at Lincoln's Inn, where he graduated in 1810. In 1831, he was returned to Parliament for Gtaton, and represented Pontefract in the House of Commons from 1835 to 1837, and from 1841 to 1847. The Earl and Countess of Warwick, the Dowager Countess of Caledon, the Marchioness of Salisbury, Lady Sarah Lennox, and other families of rank are placed in mourning by the decease of his lordship.

SIR R. PILESTON, BART.

On Wednesday, the 19th instant, aged 71, Sir Richard Pulteney Bart., of Kew, Flintshire. The deceased Baronet, who was the only son of the late Sir Richard Pulteney Bart., by Ellen, daughter of William Royst, Esq., was born in 1748, and was educated at Eton and at Christ Church, Oxford, where he was a true and Deputy-Lieutenant for Flintshire, of which county he served as High Sheriff in 1844. He formerly held the rank of Captain in the Royal Salford Militia, and was a Justice of the Peace for Flintshire. He was twice married, first, in 1812, Anne, daughter of Lieut.-General England, and secondly a daughter of — Shaw, Esq., but was again left a widower in 1847. He is survived by his only son, Richard Pulteney, Esq., who was born in 1815, and by his daughter, Anne Pulteney, Esq., now third Baroness de Grey. He was also the father of a Captain's commission in the 77th Foot. He married, in 1853, Katharine Judith, youngest daughter of the late Richard Fountaine Wilson, Esq., of Malton Park.

QUEEN OF SWEDEN.

On Tuesday, the 18th inst. aged 79, Her Majesty Eugénie Bernadine Désirée, Dowager Queen of Sweden. She was mother of the late, and grandmother of the present King of Sweden. According to the Almanack of Gotha, she was born November 9th, 1781, and married on the 10th of August, 1798, to Jean Bernadotte, by whom she had five sons and a daughter, but was left a widow in March, 1844.

WILLS AND REQUESTS

[illegible]

books and curiosities. On the decease of his son and daughter, he gives to their children the curiosities, books, drawings, &c., amongst them. Mr. Parker seems to have been enthusiastically attached to the locality in which he resided, and has been regarded with peculiar—if we may so use the term—love and admiration, the Manor-house, in which he resided, upon which, and the picturesque grounds and scenery surrounding it, he had spared neither labour nor expense to embellish. It is under this feeling that the testator has particularly expressed in his will the most ardent desire that this domain may never pass out of the possession of his family.

His Excellency Sir Henry George Ward, G.C.M.G., the Governor of Madras, formerly Governor and Commander-in-Chief of Ceylon, who died suddenly on the 2nd of October last, had executed his will in January, 1898, at his seat, Glendon Park, Hertford, which was attested by his housekeeper, Jane Humphreys, and his steward, William Peet, but which will was not discovered until after the administration had been taken out, it being proved that the testator had been seized of the property in fee simple, and the will administered to by Swinburns Ward, Esq., the testator's son; the surviving executors nominated therein, namely, Emily Lady Ward, his relict, and Rear Admiral C. H. Swinburns, her brother, having renounced. The will is very short, and the disposition as follows:—“I give all my monies, goods, chattels, and real estate, wheresoever situate, unto my only son, Henry George Ward, in England was sworn under £5,000. Lady Ward was married to the late Edward Swinburns, Bart., to whom the testator was married in 1824, and by whom he leaves a family. Sir Henry was actively employed in various departments under the Government, at home, abroad, and in our colonies. In 1816 he was Attaché at Stockholm, in 1818 at the Hague, in 1819 at Madrid, from 1825 to 1827 Minister of the Legation at Copenhagen, and in 1830 at Copenhagen. He was at Sheffield successfully in Parliament, and from 1840 to 1849 was Secretary to the Admiralty, and in that year received the honour of Knighthood, and was appointed Lord High Commissioner of the Ionian Isles. In 1855 became Governor and Commander-in-Chief of Ceylon, and afterwards Governor of Madras. It will be seen that the testator was a man of high position, and it is much to be regretted that he should have situated his testamentary disposition in a will so short.”

Admiral Sir Charles Napier, K.C.B., M.P., late of Merchant's Hall, near Horseand, Southampton, and of 18, Albemarle-street, Piccadilly, died on the 6th of November last, aged 74. Sir Charles had executed his will in 1849, and appointed Lord Napier, together with his daughter and her husband, the Rev. Henry Jodrell, M.A., chaplain to the Duke of Leeds, and rector of Gillingham, Kent, executors. The will was proved on the 12th of December 1850, and granted by the London court on the 12th of the present month. Sir Charles has willed his property in the following manner. He bequeaths his estate, real and personal, to his daughter, Elvira Fanny Harriet, for her life, then to her husband, the Rev. Henry Jodrell, for his life, and on their respective decease to their eldest son, Charles Napier, Esq., for his life, and on his decease to their eldest grandchild, Sir Charles had executed a codicil entirely in his own handwriting, bearing date the 27th of September, 1855, bequeathing to the widow of Mr. Charles Wilkins an annuity of £100, and leaving to her the house and furniture in Albemarle-street, and for her children, the annuity also at her decease to be continued to her children, and to the children of her children, in equal shares, until the death of W. J. Oswald, Plymouth, B.N. We cannot say everything that is glib and warlike with the very name of Napier, so many persons bearing this appellation have devoted themselves to the military or naval service of their country. Of this distinguished race, Admiral Sir Charles Napier stands forth most prominent, and his name is a household word, like those of Nelson and our other naval heroes, will run down to posterity.

The Most Noble Charles Duke of Richmond and Lennox, K.G., P.C., of Gordon Castle, Scotland, Goodwood Park, Sussex, and Portland-place, London, died at his town residence on the 21st of October, aged 70. His will bears date the 10th of July, 1860, which was proved in Her Majesty's Court of Probate on the 12th of August, 1860, by the Duke of Richmond and Lennox (hereafter the Earl of March). The personality was sworn under £120,000. The will is contained in a small compass, being mostly written on three sides of folio-leaf, giving directions with the disposition of his real and personal estate, and family pictures, animals, and moderns, that may be in Gordon Castle shall be held in trust as heirship movables, according to the law of Scotland; and those in Goodwood and London together with the plate to descend as heir-looms. His Grace desires and bequeaths all his property, real and personal, to his eldest son, the Duke of Richmond and Lennox, and his issue, in full and sole possession, and to his second son, the Duke of Devonshire, and his issue, in full and sole possession, and to his third son, the Duke of Marlborough, and his issue, in full and sole possession, and to his fourth son, the Duke of Devonshire, and his issue, in full and sole possession. The attesting witnesses are M. S. Davidson and F. O. Davidson, Solicitors, Bloomsbury-square. The Duke had distinguished himself very prominently as the patron of agriculture, and has been very justly designated "the Farmer's Friend."

Shadwell Morte, Boulton, Boulton, Esq., formerly of Exeter, Castle, Inverness, N.B., but late of Clifton Place, Hyack, had executed his will on the 24th of January, 1850, then residing at Gloucester-square, Hyack Park. There are three codicils appended thereto, dated respectively in 1856, 1859, and 1860. The testator was a bachelor, and had no issue. He was a member of the Samuel Boulton, Esq., the personality was sworn to under £45,000. Probate was granted on the 12th of December. This gentleman disposes of his property in the following terms:—He bequeaths to his widow an annuity of £500 beyond all other income, with an immediate legacy of £250; he also bequeaths to his daughter, Miss Boulton, £1000, and the residue of his estate to the furniture, plate, carriages, &c. To his eldest son he leaves two shares more in the residue of his entire property than he has bequeathed to his other children; he also directs to be transferred into his eldest son a name certain Indian securities, and as the testator appears to have been a disciple of our famous old Isaac Newton, he bequeaths to his eldest son the sum of £1000, and the residue of his estate to the furniture, plate, carriages, &c. Mr. Boulton was formerly of the Bengal Civil Service, where he acquired a competency, and has passed the remainder of his days in his native country, his death "fatherland," in the possession of those comforts which a life of early toil has procured to a child of his country. He was a member of the Society of Friends, and a member of the Society of Friends, and a member of the Society of Friends.

Henry Richard Temple, Esq., of Leamington, Warwickshire, and late of Blackheath, Kent. This gentleman, who is very respectably connected, met his death under very appalling circumstances: he was journeying from London to Blackheath, in a carriage of the North Kent Railway Company, on the 30th of November last, when, on the arrival of the train at its place of destination, he was found lifeless. Mr. Temple had made his will in 1863, whilst on a visit at his friend Mr. Whitaker's residence at Blackheath. The executors therein nominated are—

THE RELIEF OF LUCKNOW will **CLOSE SHORTLY.**—**BARKER'S** GRAND PICTURE of the triumphant **WRITING OF HAYLECK, OUTRAM, and COLIN CAMPBELL, ON VIEW at HAYWARD & LEGGATT'S, 79, COENHILL.** Admission Free, by Private Address Card. THE IMPROVED PATENT HARMONIUMS.

MANUFACTURED BY ALEXANDRE & SON, OF PARIS.

CHIEF WHOLESALE AGENTS: METZLER & CO.,

37, 38, & 35, GREAT MARLBOROUGH STREET, LONDON,—W.

ALEXANDRE'S HARMONIUMS are universally admitted to excel all others in durability, and in the power and quality of their tone; and as they rarely require tuning, and give no trouble in their management, they are coming daily into more general use.

The following is a complete List of all the Instruments manufactured by them, forming a large Assortment, suitable for either the Church, School, or Drawing-Room.

PRICES.

| | |
|--|------------|
| No. 1.—In Oak Case, Four Octaves, One Row of Vibrators | 6 Guineas. |
| 2.—In Mahogany Case, Four Octaves, One Row of Vibrators | 7 " |
| 3.—In Oak Case, Five Octaves, One Row of Vibrators (Wind Indicator) | 10 " |
| 4.—In Mahogany Case, Five Octaves, One Row of Vibrators (Wind Indicator) | 10 " |
| 5.—In Oak Case, Five Octaves, Three Stops, One Row of Vibrators (Wind Indicator) | 13 " |
| 6.—In Oak Case, Five Octaves, Five Stops, Two Rows of Vibrators | 23 " |
| 7.—In Oak Case, Five Octaves, Nine Stops, Two Rows of Vibrators | 23 " |
| 8.—In Oak Case, Five Octaves, Thirteen Stops, Four Rows of Vibrators | 35 " |
| 9.—In Mahogany Case, Five Octaves, One Row of Vibrators | 15 " |
| 10.—In Mahogany Case, Five Octaves, Three Stops, One Row of Vibrators (Wind Indicator) | 15 " |
| 11.—In Mahogany Case, Five Octaves, Five Stops, Two Rows of Vibrators | 27 " |
| 12.—In Mahogany Case, Five Octaves, Ten Stops (Tremolo) Two Rows of Vibrators | 27 " |
| 13.—In Mahogany Case, Five Octaves, Fourteen Stops (Tremolo) Four Rows of Vibrators | 37 " |

WITH THE PATENT PERCUSSION, OR PIANOFORTE HAMMER ACTION.

The invention of the PATENT PERCUSSION ACTION has entirely removed the sole objection to these admired instruments—namely of rapidity of articulation when used for Pianoforte Music. It consists of a set of Hammers which strike the Vibrators at the same moment that the air is admitted, thus facilitating the execution of the most brilliant and rapid passages, and also producing a fuller and very superior quality of tone, and imparting to this instrument all the advantages of the Pianoforte.
